4.486.1 Detailed Description

template<typename _Tp, typename _Alloc = allocator<_Tp>>class std::forward_list< _Tp, _Alloc >

A standard container with linear time access to elements, and fixed time insertion/deletion at any point in the sequence.

Template Parameters

_Tp	Type of element.
_Alloc	Allocator type, defaults to allocator<_Tp>.

Meets the requirements of a `container`, a `sequence`, including the `optional sequence requirements` with the exception of `at` and `operator[]`.

This is a *singly linked* list. Traversal up the list requires linear time, but adding and removing elements (or *nodes*) is done in constant time, regardless of where the change takes place. Unlike std::vector and std::deque, random-access iterators are not provided, so subscripting ([]) access is not allowed. For algorithms which only need sequential access, this lack makes no difference.

Also unlike the other standard containers, std::forward_list provides specialized algorithms unique to linked lists, such as splicing, sorting, and in-place reversal.

Definition at line 423 of file forward_list.h.

4.486.2 Constructor & Destructor Documentation

4.486.2.1 template<typename _Tp, typename _Alloc = allocator<_Tp>> std::forward_list< _Tp, _Alloc >::forward_list ( ) [default]

Creates a forward_list with no elements.

4.486.2.2 template<typename _Tp, typename _Alloc = allocator<_Tp>> std::forward_list< _Tp, _Alloc >::forward_list (const _Alloc & *__al*) [inline], [explicit], [noexcept]

Creates a forward_list with no elements.

Parameters

__al	An allocator object.

Definition at line 466 of file forward_list.h.

4.486.2.3 template<typename _Tp, typename _Alloc = allocator<_Tp>> std::forward_list< _Tp, _Alloc >::forward_list (const forward_list< _Tp, _Alloc > & *__list,* const _Alloc & *__al*) [inline]

Copy constructor with allocator argument.

Parameters

__list	Input list to copy.
__al	An allocator object.

Definition at line 475 of file forward_list.h.

References std::forward_list< _Tp, _Alloc >::begin(), and std::forward_list< _Tp, _Alloc >::end().

4.486.2.4 template<typename _Tp, typename _Alloc = allocator<_Tp>> std::forward_list< _Tp, _Alloc >::forward_list (forward_list< _Tp, _Alloc > && *__list,* const _Alloc & *__al*) [inline], [noexcept]

Move constructor with allocator argument.

Parameters

__list	Input list to move.
__al	An allocator object.

Definition at line 503 of file forward_list.h.

4.486.2.5 template<typename _Tp, typename _Alloc = allocator<_Tp>> std::forward_list< _Tp, _Alloc >::forward_list (size_type *__n,* const _Alloc & *__al* = _Alloc()) [inline], [explicit]

Creates a forward_list with default constructed elements.

Parameters

__n	The number of elements to initially create.
__al	An allocator object.

This constructor creates the forward_list with *__n* default constructed elements.

Definition at line 518 of file forward_list.h.

4.486.2.6 template<typename _Tp, typename _Alloc = allocator<_Tp>> std::forward_list< _Tp, _Alloc >::forward_list (size_type *__n*, const _Tp & *__value*, const _Alloc & *__al* = _Alloc()) [inline]

Creates a forward_list with copies of an exemplar element.

Parameters

__n	The number of elements to initially create.
__value	An element to copy.
__al	An allocator object.

This constructor fills the forward_list with *__n* copies of *__value*.

Definition at line 531 of file forward_list.h.

4.486.2.7 template<typename _Tp, typename _Alloc = allocator<_Tp>> template<typename _InputIterator , typename = std::_RequireInputIter<_InputIterator>> std::forward_list< _Tp, _Alloc >::forward_list (_InputIterator *__first*, _InputIterator *__last*, const _Alloc & *__al* = _Alloc()) [inline]

Builds a forward_list from a range.

Parameters

__first	An input iterator.
__last	An input iterator.
__al	An allocator object.

Create a forward_list consisting of copies of the elements from [*__first*,*__last*). This is linear in N (where N is distance(*__first*,*__last*)).

Definition at line 548 of file forward_list.h.

4.486.2.8 template<typename _Tp, typename _Alloc = allocator<_Tp>> std::forward_list< _Tp, _Alloc >::forward_list (const forward_list< _Tp, _Alloc > & *__list*) [inline]

The forward_list copy constructor.

Parameters

__list	A forward_list of identical element and allocator types.

Definition at line 558 of file forward_list.h.

References std::forward_list< _Tp, _Alloc >::begin(), and std::forward_list< _Tp, _Alloc >::end().

4.486.2.9 template<typename _Tp, typename _Alloc = allocator<_Tp>> std::forward_list< _Tp, _Alloc >::forward_list (forward_list< _Tp, _Alloc > &&) [default]

The forward_list move constructor.

Parameters

__list	A forward_list of identical element and allocator types.

The newly-created forward_list contains the exact contents of the moved instance. The contents of the moved instance are a valid, but unspecified forward_list.

4.486.2.10 template<typename _Tp, typename _Alloc = allocator<_Tp>> std::forward_list< _Tp, _Alloc >::forward_list (std::initializer_list< _Tp > *__il,* const _Alloc & *__al* = _Alloc()) [inline]

Builds a forward_list from an initializer_list.

Parameters

__il	An initializer_list of value_type.
__al	An allocator object.

Create a forward_list consisting of copies of the elements in the initializer_list *__il*. This is linear in __il.size().

Definition at line 582 of file forward_list.h.

4.486.2.11 template<typename _Tp, typename _Alloc = allocator<_Tp>> std::forward_list< _Tp, _Alloc >::~forward_list ( ) [inline], [noexcept]

The forward_list dtor.

Definition at line 590 of file forward_list.h.

4.486.3 Member Function Documentation

4.486.3.1 template<typename _Tp, typename _Alloc = allocator<_Tp>> template<typename _InputIterator , typename = std::_RequireInputIter<_InputIterator>> void std::forward_list< _Tp, _Alloc >::assign (_InputIterator *__first,* _InputIterator *__last*) [inline]

Assigns a range to a forward_list.

Parameters

__first	An input iterator.
__last	An input iterator.

This function fills a forward_list with copies of the elements in the range [*__first*,*__last*).

Note that the assignment completely changes the forward_list and that the number of elements of the resulting forward_list is the same as the number of elements assigned.

Definition at line 658 of file forward_list.h.

Referenced by std::forward_list< _Tp, _Alloc >::assign(), and std::forward_list< _Tp, _Alloc >::operator=().

4.486.3.2 template<typename _Tp, typename _Alloc = allocator<_Tp>> void std::forward_list< _Tp, _Alloc >::assign (size_type *__n,* const _Tp & *__val*) [inline]

Assigns a given value to a forward_list.

Parameters

__n	Number of elements to be assigned.
__val	Value to be assigned.

This function fills a forward_list with *__n* copies of the given value. Note that the assignment completely changes the forward_list, and that the resulting forward_list has __n elements.

Definition at line 675 of file forward_list.h.

4.486.3.3 template<typename _Tp, typename _Alloc = allocator<_Tp>> void std::forward_list< _Tp, _Alloc >::assign (std::initializer_list< _Tp > __il) [inline]

Assigns an initializer_list to a forward_list.

Parameters

__il	An initializer_list of value_type.

Replace the contents of the forward_list with copies of the elements in the initializer_list *__il*. This is linear in il.size().

Definition at line 687 of file forward_list.h.

References std::forward_list< _Tp, _Alloc >::assign().

4.486.3.4 template<typename _Tp, typename _Alloc = allocator<_Tp>> iterator std::forward_list< _Tp, _Alloc >::before_begin ( ) [inline], [noexcept]

Returns a read/write iterator that points before the first element in the forward_list. Iteration is done in ordinary element order.

Definition at line 702 of file forward_list.h.

Referenced by std::forward_list< _Tp, _Alloc >::insert_after().

4.486.3.5 template<typename _Tp, typename _Alloc = allocator<_Tp>> const_iterator std::forward_list< _Tp, _Alloc >::before_begin ( ) const [inline], [noexcept]

Returns a read-only (constant) iterator that points before the first element in the forward_list. Iteration is done in ordinary element order.

Definition at line 711 of file forward_list.h.

4.486.3.6 template<typename _Tp, typename _Alloc = allocator<_Tp>> iterator std::forward_list< _Tp, _Alloc >::begin ( ) [inline], [noexcept]

Returns a read/write iterator that points to the first element in the forward_list. Iteration is done in ordinary element order.

Definition at line 719 of file forward_list.h.

Referenced by std::forward_list< _Tp, _Alloc >::forward_list().

4.486.3.7 template<typename _Tp, typename _Alloc = allocator<_Tp>> const_iterator std::forward_list< _Tp, _Alloc >::begin ( ) const [inline], [noexcept]

Returns a read-only (constant) iterator that points to the first element in the forward_list. Iteration is done in ordinary element order.

Definition at line 728 of file forward_list.h.

4.486.3.8 template<typename _Tp, typename _Alloc = allocator<_Tp>> const_iterator std::forward_list< _Tp, _Alloc >::cbefore_begin ( ) const [inline], [noexcept]

Returns a read-only (constant) iterator that points before the first element in the forward_list. Iteration is done in ordinary element order.

Definition at line 764 of file forward_list.h.

Referenced by std::forward_list< _Tp, _Alloc >::emplace_front(), and std::forward_list< _Tp, _Alloc >::push_front().

4.486.3.9 template<typename _Tp, typename _Alloc = allocator<_Tp>> const_iterator std::forward_list< _Tp, _Alloc >::cbegin ( ) const [inline], [noexcept]

Returns a read-only (constant) iterator that points to the first element in the forward_list. Iteration is done in ordinary element order.

Definition at line 755 of file forward_list.h.

Referenced by std::forward_list< _Tp, _Alloc >::operator=(), and std::operator==().

4.486.3.10 template<typename _Tp, typename _Alloc = allocator<_Tp>> const_iterator std::forward_list< _Tp, _Alloc >::cend ( ) const [inline],[noexcept]

Returns a read-only (constant) iterator that points one past the last element in the forward_list. Iteration is done in ordinary element order.

Definition at line 773 of file forward_list.h.

Referenced by std::forward_list< _Tp, _Alloc >::operator=(), and std::operator==().

4.486.3.11 template<typename _Tp, typename _Alloc = allocator<_Tp>> void std::forward_list< _Tp, _Alloc >::clear ( ) [inline],[noexcept]

Erases all the elements.

Note that this function only erases the elements, and that if the elements themselves are pointers, the pointed-to memory is not touched in any way. Managing the pointer is the user's responsibility.

Definition at line 1086 of file forward_list.h.

4.486.3.12 template<typename _Tp, typename _Alloc = allocator<_Tp>> template<typename... _Args> iterator std::forward_list< _Tp, _Alloc >::emplace_after (const_iterator *__pos*, _Args &&... *__args*) [inline]

Constructs object in forward_list after the specified iterator.

Parameters

__pos	A const_iterator into the forward_list.
__args	Arguments.

Returns

An iterator that points to the inserted data.

This function will insert an object of type T constructed with T(std::forward<Args>(args)...) after the specified location. Due to the nature of a forward_list this operation can be done in constant time, and does not invalidate iterators and references.

Definition at line 895 of file forward_list.h.

4.486.3.13 template<typename _Tp, typename _Alloc = allocator<_Tp>> template<typename... _Args> void std::forward_list< _Tp, _Alloc >::emplace_front (_Args &&... *__args*) [inline]

Constructs object in forward_list at the front of the list.

Parameters

__args	Arguments.

This function will insert an object of type Tp constructed with Tp(std::forward<Args>(args)...) at the front of the list Due to the nature of a forward_list this operation can be done in constant time, and does not invalidate iterators and references.

Definition at line 834 of file forward_list.h.

References std::forward_list< _Tp, _Alloc >::cbefore_begin(), and std::forward_list< _Tp, _Alloc >::front().

4.486.3.14 template<typename _Tp, typename _Alloc = allocator<_Tp>> bool std::forward_list< _Tp, _Alloc >::empty ( ) const [inline], [noexcept]

Returns true if the forward_list is empty. (Thus begin() would equal end().)

Definition at line 781 of file forward_list.h.

4.486.3.15 template<typename _Tp, typename _Alloc = allocator<_Tp>> iterator std::forward_list< _Tp, _Alloc >::end ( ) [inline], [noexcept]

Returns a read/write iterator that points one past the last element in the forward_list. Iteration is done in ordinary element order.

Definition at line 737 of file forward_list.h.

Referenced by std::forward_list< _Tp, _Alloc >::forward_list(), and std::forward_list< _Tp, _Alloc >::insert_after().

4.486.3.16 template<typename _Tp, typename _Alloc = allocator<_Tp>> const_iterator std::forward_list< _Tp, _Alloc >::end ( ) const [inline], [noexcept]

Returns a read-only iterator that points one past the last element in the forward_list. Iteration is done in ordinary element order.

Definition at line 746 of file forward_list.h.

4.486.3.17 template<typename _Tp, typename _Alloc = allocator<_Tp>> iterator std::forward_list< _Tp, _Alloc >::erase_after (const_iterator *__pos*) [inline]

Removes the element pointed to by the iterator following `pos`.

Parameters

__pos	Iterator pointing before element to be erased.

Returns

An iterator pointing to the element following the one that was erased, or end() if no such element exists.

This function will erase the element at the given position and thus shorten the forward_list by one.

Due to the nature of a forward_list this operation can be done in constant time, and only invalidates iterators/references to the element being removed. The user is also cautioned that this function only erases the element, and that if the element is itself a pointer, the pointed-to memory is not touched in any way. Managing the pointer is the user's responsibility.

Definition at line 998 of file forward_list.h.

4.486.3.18 template<typename _Tp, typename _Alloc = allocator<_Tp>> iterator std::forward_list< _Tp, _Alloc >::erase_after (const_iterator *__pos*, const_iterator *__last*) [inline]

Remove a range of elements.

Parameters

__pos	Iterator pointing before the first element to be erased.
__last	Iterator pointing to one past the last element to be erased.

Returns

@ __last.

This function will erase the elements in the range (__pos,__last) and shorten the forward_list accordingly.

This operation is linear time in the size of the range and only invalidates iterators/references to the element being removed. The user is also cautioned that this function only erases the elements, and that if the elements themselves are pointers, the pointed-to memory is not touched in any way. Managing the pointer is the user's responsibility.

Definition at line 1021 of file forward_list.h.

4.486.3.19 template<typename _Tp, typename _Alloc = allocator<_Tp>> reference std::forward_list< _Tp, _Alloc >::front ( ) [inline]

Returns a read/write reference to the data at the first element of the forward_list.

Definition at line 798 of file forward_list.h.

Referenced by std::forward_list< _Tp, _Alloc >::emplace_front().

4.486.3.20 template<typename _Tp, typename _Alloc = allocator<_Tp>> const_reference std::forward_list< _Tp, _Alloc >::front ( ) const [inline]

Returns a read-only (constant) reference to the data at the first element of the forward_list.

Definition at line 809 of file forward_list.h.

4.486.3.21 template<typename _Tp, typename _Alloc = allocator<_Tp>> allocator_type std::forward_list< _Tp, _Alloc >::get_allocator ( ) const [inline], [noexcept]

Get a copy of the memory allocation object.

Definition at line 692 of file forward_list.h.

4.486.3.22 template<typename _Tp, typename _Alloc = allocator<_Tp>> iterator std::forward_list< _Tp, _Alloc >::insert_after (const_iterator *__pos,* const _Tp & *__val*) [inline]

Inserts given value into forward_list after specified iterator.

Parameters

__pos	An iterator into the forward_list.
__val	Data to be inserted.

Returns

An iterator that points to the inserted data.

This function will insert a copy of the given value after the specified location. Due to the nature of a forward_list this operation can be done in constant time, and does not invalidate iterators and references.

Definition at line 912 of file forward_list.h.

Referenced by std::forward_list< _Tp, _Alloc >::insert_after().

4.486.3.23 template<typename _Tp, typename _Alloc > forward_list< _Tp, _Alloc >::iterator forward_list::insert_after (const_iterator *__pos,* size_type *__n,* const _Tp & *__val*)

Inserts a number of copies of given data into the forward_list.

Parameters

__pos	An iterator into the forward_list.
__n	Number of elements to be inserted.
__val	Data to be inserted.

Returns

An iterator pointing to the last inserted copy of *val* or *pos* if *n* == 0.

This function will insert a specified number of copies of the given data after the location specified by *pos*.

This operation is linear in the number of elements inserted and does not invalidate iterators and references.

Definition at line 256 of file forward_list.tcc.

References std::forward_list< _Tp, _Alloc >::before_begin(), and std::forward_list< _Tp, _Alloc >::end().

4.486.3.24 template<typename _Tp, typename _Alloc = allocator<_Tp>> template<typename _InputIterator , typename = std::_RequireInputIter<_InputIterator>> iterator std::forward_list< _Tp, _Alloc >::insert_after (const_iterator *__pos*, _InputIterator *__first*, _InputIterator *__last*)

Inserts a range into the forward_list.

Parameters

__pos	An iterator into the forward_list.
__first	An input iterator.
__last	An input iterator.

Returns

An iterator pointing to the last inserted element or *__pos* if *__first* == *__last*.

This function will insert copies of the data in the range [*__first*,*__last*) into the forward_list after the location specified by *__pos*.

This operation is linear in the number of elements inserted and does not invalidate iterators and references.

4.486.3.25 template<typename _Tp, typename _Alloc = allocator<_Tp>> iterator std::forward_list< _Tp, _Alloc >::insert_after (const_iterator *__pos*, std::initializer_list< _Tp > *__il*) [inline]

Inserts the contents of an initializer_list into forward_list after the specified iterator.

Parameters

__pos	An iterator into the forward_list.
__il	An initializer_list of value_type.

Returns

An iterator pointing to the last inserted element or *__pos* if *__il* is empty.

This function will insert copies of the data in the initializer_list *__il* into the forward_list before the location specified by *__pos*.

This operation is linear in the number of elements inserted and does not invalidate iterators and references.

Definition at line 977 of file forward_list.h.

References std::forward_list< _Tp, _Alloc >::insert_after().

4.486.3.26 template<typename _Tp, typename _Alloc = allocator<_Tp>> size_type std::forward_list< _Tp, _Alloc >::max_size ( ) const [inline], [noexcept]

Returns the largest possible number of elements of forward_list.

Definition at line 788 of file forward_list.h.

References std::allocator_traits< _Alloc >::max_size().

4.486.3.27 template<typename _Tp, typename _Alloc = allocator<_Tp>> void std::forward_list< _Tp, _Alloc >::merge (forward_list< _Tp, _Alloc > && *__list*) [inline]

Merge sorted lists.

Parameters

__list	Sorted list to merge.

Assumes that both *list* and this list are sorted according to operator<(). Merges elements of *__list* into this list in sorted order, leaving *__list* empty when complete. Elements in this list precede elements in *__list* that are equal.

Definition at line 1242 of file forward_list.h.

References std::move().

4.486.3.28 template<typename _Tp , typename _Alloc > template<typename _Comp > void forward_list::merge (forward_list< _Tp, _Alloc > && *__list,* _Comp *__comp*)

Merge sorted lists according to comparison function.

Parameters

__list	Sorted list to merge.
__comp	Comparison function defining sort order.

Assumes that both *__list* and this list are sorted according to comp. Merges elements of *__list* into this list in sorted order, leaving *__list* empty when complete. Elements in this list precede elements in *__list* that are equivalent according to comp().

Definition at line 373 of file forward_list.tcc.

References std::move().

4.486.3.29 template<typename _Tp , typename _Alloc > forward_list< _Tp, _Alloc > & forward_list::operator= (const forward_list< _Tp, _Alloc > & *__list*)

The forward_list assignment operator.

Parameters

__list	A forward_list of identical element and allocator types.

All the elements of *__list* are copied.

Whether the allocator is copied depends on the allocator traits.

Definition at line 140 of file forward_list.tcc.

References std::__addressof(), std::forward_list< _Tp, _Alloc >::cbegin(), and std::forward_list< _Tp, _Alloc >::cend().

4.486.3.30 template<typename _Tp, typename _Alloc = allocator<_Tp>> forward_list& std::forward_list< _Tp, _Alloc >::operator= (forward_list< _Tp, _Alloc > && *__list*) [inline], [noexcept]

The forward_list move assignment operator.

Parameters

__list	A forward_list of identical element and allocator types.

The contents of *__list* are moved into this forward_list (without copying, if the allocators permit it).

Afterwards *__list* is a valid, but unspecified forward_list

Whether the allocator is moved depends on the allocator traits.

Definition at line 618 of file forward_list.h.

References std::move().

4.486.3.31 template<typename _Tp, typename _Alloc = allocator<_Tp>> forward_list& std::forward_list< _Tp, _Alloc >::operator= (std::initializer_list< _Tp > *__il*) [inline]

The forward_list initializer list assignment operator.

Parameters

__il	An initializer_list of value_type.

Replace the contents of the forward_list with copies of the elements in the initializer_list *__il*. This is linear in __il.size().

Definition at line 637 of file forward_list.h.

References std::forward_list< _Tp, _Alloc >::assign().

4.486.3.32 template<typename _Tp, typename _Alloc = allocator<_Tp>> void std::forward_list< _Tp, _Alloc >::pop_front ( ) [inline]

Removes first element.

This is a typical stack operation. It shrinks the forward_list by one. Due to the nature of a forward_list this operation can be done in constant time, and only invalidates iterators/references to the element being removed.

Note that no data is returned, and if the first element's data is needed, it should be retrieved before pop_front() is called.

Definition at line 877 of file forward_list.h.

4.486.3.33 template<typename _Tp, typename _Alloc = allocator<_Tp>> void std::forward_list< _Tp, _Alloc >::push_front (const _Tp & *__val*) [inline]

Add data to the front of the forward_list.

Parameters

__val	Data to be added.

This is a typical stack operation. The function creates an element at the front of the forward_list and assigns the given data to it. Due to the nature of a forward_list this operation can be done in constant time, and does not invalidate iterators and references.

Definition at line 854 of file forward_list.h.

References std::forward_list< _Tp, _Alloc >::cbefore_begin().

4.486.3.34 template<typename _Tp, typename _Alloc > auto forward_list::remove (const _Tp & *__val*)

Remove all elements equal to value.

Parameters

__val	The value to remove.

Removes every element in the list equal to *__val*. Remaining elements stay in list order. Note that this function only erases the elements, and that if the elements themselves are pointers, the pointed-to memory is not touched in any way. Managing the pointer is the user's responsibility.

Definition at line 290 of file forward_list.tcc.

References std::__addressof().

4.486.3.35 template<typename _Tp, typename _Alloc = allocator<_Tp>> template<typename _Pred > __remove_return_type std::forward_list< _Tp, _Alloc >::remove_if (_Pred *__pred*)

Remove all elements satisfying a predicate.

Parameters

__pred	Unary predicate function or object.

Removes every element in the list for which the predicate returns true. Remaining elements stay in list order. Note that this function only erases the elements, and that if the elements themselves are pointers, the pointed-to memory is not touched in any way. Managing the pointer is the user's responsibility.

4.486.3.36 template<typename _Tp , typename _Alloc > void forward_list::resize (size_type *__sz*)

Resizes the forward_list to the specified number of elements.

Parameters

__sz	Number of elements the forward_list should contain.

This function will resize the forward_list to the specified number of elements. If the number is smaller than the forward_list's current number of elements the forward_list is truncated, otherwise the forward_list is extended and the new elements are default constructed.

Definition at line 182 of file forward_list.tcc.

References std::initializer_list< _E >::end().

4.486.3.37 template<typename _Tp , typename _Alloc > void forward_list::resize (size_type *__sz,* const value_type & *__val*)

Resizes the forward_list to the specified number of elements.

Parameters

__sz	Number of elements the forward_list should contain.
__val	Data with which new elements should be populated.

This function will resize the forward_list to the specified number of elements. If the number is smaller than the forward_list's current number of elements the forward_list is truncated, otherwise the forward_list is extended and new elements are populated with given data.

Definition at line 201 of file forward_list.tcc.

References std::initializer_list< _E >::end().

4.486.3.38 template<typename _Tp, typename _Alloc = allocator<_Tp>> void std::forward_list< _Tp, _Alloc >::reverse ( ) [inline], [noexcept]

Reverse the elements in list.

Reverse the order of elements in the list in linear time.

Definition at line 1295 of file forward_list.h.

4.486.3.39 template<typename _Tp, typename _Alloc = allocator<_Tp>> void std::forward_list< _Tp, _Alloc >::sort ( ) [inline]

Sort the elements of the list.

Sorts the elements of this list in NlogN time. Equivalent elements remain in list order.

Definition at line 1276 of file forward_list.h.

4.486.3.40 template<typename _Tp , class _Alloc > template<typename _Comp > void forward_list::sort (_Comp __comp)

Sort the forward_list using a comparison function.

Sorts the elements of this list in NlogN time. Equivalent elements remain in list order.

Definition at line 417 of file forward_list.tcc.

4.486.3.41 template<typename _Tp, typename _Alloc = allocator<_Tp>> void std::forward_list< _Tp, _Alloc >::splice_after (const_iterator __pos, forward_list< _Tp, _Alloc > && __list) [inline], [noexcept]

Insert contents of another forward_list.

Parameters

__pos	Iterator referencing the element to insert after.
__list	Source list.

The elements of *list* are inserted in constant time after the element referenced by *pos*. *list* becomes an empty list.

Requires this != *x*.

Definition at line 1103 of file forward_list.h.

4.486.3.42 template<typename _Tp , typename _Alloc > void forward_list::splice_after (const_iterator __pos, forward_list< _Tp, _Alloc > && __list, const_iterator __i) [noexcept]

Insert element from another forward_list.

Parameters

__pos	Iterator referencing the element to insert after.
__list	Source list.
__i	Iterator referencing the element before the element to move.

Removes the element in list *list* referenced by *i* and inserts it into the current list after *pos*.

Definition at line 239 of file forward_list.tcc.

4.486.3.43 template<typename _Tp, typename _Alloc = allocator<_Tp>> void std::forward_list< _Tp, _Alloc >::splice_after (const_iterator __pos, forward_list< _Tp, _Alloc > && , const_iterator __before, const_iterator __last) [inline], [noexcept]

Insert range from another forward_list.

Parameters

__pos	Iterator referencing the element to insert after.

__list	Source list.
__before	Iterator referencing before the start of range in list.
__last	Iterator referencing the end of range in list.

Removes elements in the range (__before,__last) and inserts them after *__pos* in constant time.

Undefined if *__pos* is in (__before,__last).

Definition at line 1147 of file forward_list.h.

4.486.3.44 template<typename _Tp, typename _Alloc = allocator<_Tp>> void std::forward_list< _Tp, _Alloc >::splice_after (const_iterator *__pos,* forward_list< _Tp, _Alloc > & , const_iterator *__before,* const_iterator *__last*) [inline],[noexcept]

Insert range from another forward_list.

Parameters

__pos	Iterator referencing the element to insert after.
__list	Source list.
__before	Iterator referencing before the start of range in list.
__last	Iterator referencing the end of range in list.

Removes elements in the range (__before,__last) and inserts them after *__pos* in constant time.

Undefined if *__pos* is in (__before,__last).

Definition at line 1152 of file forward_list.h.

4.486.3.45 template<typename _Tp, typename _Alloc = allocator<_Tp>> void std::forward_list< _Tp, _Alloc >::swap (forward_list< _Tp, _Alloc > & *__list*) [inline],[noexcept]

Swaps data with another forward_list.

Parameters

__list	A forward_list of the same element and allocator types.

This exchanges the elements between two lists in constant time. Note that the global std::swap() function is specialized such that std::swap(l1,l2) will feed to this function.

Whether the allocators are swapped depends on the allocator traits.

Definition at line 1040 of file forward_list.h.

4.486.3.46 template<typename _Tp, typename _Alloc = allocator<_Tp>> __remove_return_type std::forward_list< _Tp, _Alloc >::unique ( ) [inline]

Remove consecutive duplicate elements.

For each consecutive set of elements with the same value, remove all but the first one. Remaining elements stay in list order. Note that this function only erases the elements, and that if the elements themselves are pointers, the pointed-to memory is not touched in any way. Managing the pointer is the user's responsibility.

Definition at line 1211 of file forward_list.h.

4.486.3.47 template<typename _Tp, typename _Alloc = allocator<_Tp>> template<typename _BinPred > __remove_return_type std::forward_list< _Tp, _Alloc >::unique (_BinPred *__binary_pred*)

Remove consecutive elements satisfying a predicate.

Parameters

__binary_pred	Binary predicate function or object.

For each consecutive set of elements [first,last) that satisfy predicate(first,i) where i is an iterator in [first,last), remove all but the first one. Remaining elements stay in list order. Note that this function only erases the elements, and that if the elements themselves are pointers, the pointed-to memory is not touched in any way. Managing the pointer is the user's responsibility.

- fpos & operator-= (streamoff __off)
- fpos & **operator=** (const fpos &)=default
- void state (_StateT __st)
- _StateT state () const

4.487.1 Detailed Description

template<typename _StateT>class std::fpos< _StateT >

Class representing stream positions.

The standard places no requirements upon the template parameter StateT. In this implementation StateT must be DefaultConstructible, CopyConstructible and Assignable. The standard only requires that fpos should contain a member of type StateT. In this implementation it also contains an offset stored as a signed integer.

Parameters

StateT	Type passed to and returned from state().

Definition at line 112 of file postypes.h.

4.487.2 Constructor & Destructor Documentation

4.487.2.1 template<typename _StateT> std::fpos< _StateT >::fpos (streamoff __off) [inline]

Construct position from offset.

Definition at line 133 of file postypes.h.

4.487.3 Member Function Documentation

4.487.3.1 template<typename _StateT> std::fpos< _StateT >::operator streamoff ( ) const [inline]

Convert to streamoff.

Definition at line 143 of file postypes.h.

4.487.3.2 template<typename _StateT> fpos std::fpos< _StateT >::operator+ (streamoff __off) const [inline]

Add position and offset.

Definition at line 184 of file postypes.h.

4.487.3.3 template<typename _StateT> fpos& std::fpos< _StateT >::operator+= (streamoff __off) [inline]

Add offset to this position.

Definition at line 160 of file postypes.h.

4.487.3.4 template<typename _StateT> fpos std::fpos< _StateT >::operator- (streamoff __off) const [inline]

Subtract offset from position.

Definition at line 198 of file postypes.h.

4.487.3.5 template<typename _StateT> streamoff std::fpos< _StateT >::operator- (const fpos< _StateT > & __other) const [inline]

Subtract position to return offset.

Definition at line 211 of file postypes.h.

4.487.3.6 template<typename _StateT> fpos& std::fpos< _StateT >::operator-= (streamoff __off) [inline]

Subtract offset from this position.

Definition at line 171 of file postypes.h.

4.487.3.7 template<typename _StateT> void std::fpos< _StateT >::state (_StateT __st) [inline]

Remember the value of *st*.

Definition at line 147 of file postypes.h.

4.487.3.8 template<typename _StateT> _StateT std::fpos< _StateT >::state ( ) const [inline]

Return the last set value of *st*.

Definition at line 152 of file postypes.h.

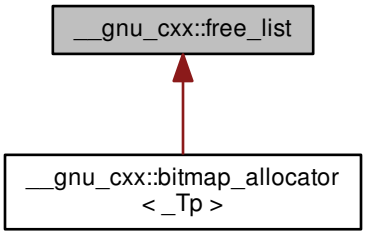
- postypes.h

4.488 __gnu_cxx::free_list Class Reference

Inheritance diagram for __gnu_cxx::free_list:



Public Types

- typedef __mutex **__mutex_type**
- typedef vector_type::iterator **iterator**
- typedef std::size_t * **value_type**
- typedef __detail::__mini_vector < value_type > **vector_type**

Public Member Functions

- void _M_clear ()
- std::size_t * _M_get (std::size_t __sz)
- void _M_insert (std::size_t *__addr) throw ()

4.488.1 Detailed Description

The free list class for managing chunks of memory to be given to and returned by the bitmap_allocator.

Definition at line 516 of file bitmap_allocator.h.

4.488.2 Member Function Documentation

4.488.2.1 void __gnu_cxx::free_list::_M_clear ( )

This function just clears the internal Free List, and gives back all the memory to the OS.

4.488.2.2 std::size_t* __gnu_cxx::free_list::_M_get (std::size_t *__sz*)

This function gets a block of memory of the specified size from the free list.

Parameters

__sz	The size in bytes of the memory required.

Returns

A pointer to the new memory block of size at least equal to that requested.

4.488.2.3 void __gnu_cxx::free_list::_M_insert (std::size_t * *__addr*) throw) [inline]

This function returns the block of memory to the internal free list.

Parameters

__addr	The pointer to the memory block that was given by a call to the _M_get function.

Definition at line 626 of file bitmap_allocator.h.

Referenced by __gnu_cxx::bitmap_allocator< _Tp >::_M_deallocate_single_object().

The documentation for this class was generated from the following file:

- bitmap_allocator.h

4.489 std::from_chars_result Struct Reference

Public Attributes

- errc **ec**
- const char * **ptr**

4.489.1 Detailed Description

Result type of std::from_chars.

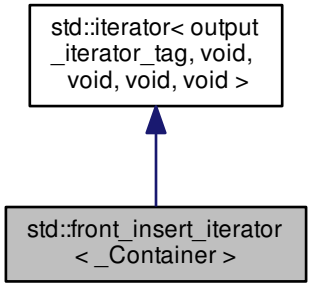
Definition at line 67 of file charconv.

The documentation for this struct was generated from the following file:

- charconv

4.490 std::front_insert_iterator< _Container > Class Template Reference

Inheritance diagram for std::front_insert_iterator< _Container >:



Public Types

- typedef _Container container_type
- typedef void difference_type
- typedef output_iterator_tag iterator_category
- typedef void pointer
- typedef void reference
- typedef void value_type

Public Member Functions

- constexpr front_insert_iterator (_Container &__x)
- constexpr front_insert_iterator & operator* ()
- constexpr front_insert_iterator & operator++ ()
- constexpr front_insert_iterator operator++ (int)
- constexpr front_insert_iterator & operator= (const typename _Container::value_type &__value)
- constexpr front_insert_iterator & **operator=** (typename _Container::value_type &&__value)

Protected Attributes

- _Container * **container**

4.490.1 Detailed Description

template<typename _Container>class std::front_insert_iterator< _Container >

Turns assignment into insertion.

These are output iterators, constructed from a container-of-T. Assigning a T to the iterator prepends it to the container using push_front.

Tip: Using the front_inserter function to create these iterators can save typing.

Definition at line 699 of file bits/stl_iterator.h.

4.490.2 Member Typedef Documentation

4.490.2.1 template<typename _Container > typedef _Container std::front_insert_iterator< _Container >::container_type

A nested typedef for the type of whatever container you used.

Definition at line 707 of file bits/stl_iterator.h.

4.490.2.2 typedef void std::iterator< output_iterator_tag , void , void , void , void >::difference_type [inherited]

Distance between iterators is represented as this type.

Definition at line 134 of file stl_iterator_base_types.h.

4.490.2.3 typedef output_iterator_tag std::iterator< output_iterator_tag , void , void , void , void >::iterator_category [inherited]

One of the tag types.

Definition at line 130 of file stl_iterator_base_types.h.

4.490.2.4 typedef void std::iterator< output_iterator_tag , void , void , void , void >::pointer [inherited]

This type represents a pointer-to-value_type.

Definition at line 136 of file stl_iterator_base_types.h.

4.490.2.5 typedef void std::iterator< output_iterator_tag , void , void , void , void >::reference [inherited]

This type represents a reference-to-value_type.

Definition at line 138 of file stl_iterator_base_types.h.

4.490.2.6 typedef void std::iterator< output_iterator_tag , void , void , void , void >::value_type [inherited]

The type "pointed to" by the iterator.

Definition at line 132 of file stl_iterator_base_types.h.

4.490.3 Constructor & Destructor Documentation

4.490.3.1 template<typename _Container > constexpr std::front_insert_iterator< _Container >::front_insert_iterator (_Container & __x) [inline], [explicit]

The only way to create this iterator is with a container.

Definition at line 716 of file bits/stl_iterator.h.

4.490.4 Member Function Documentation

4.490.4.1 template<typename _Container > constexpr front_insert_iterator& std::front_insert_iterator< _Container >::operator* ( ) [inline]

Simply returns *this.

Definition at line 758 of file bits/stl_iterator.h.

4.490.4.2 template<typename _Container > constexpr front_insert_iterator& std::front_insert_iterator< _Container >::operator++ ( ) [inline]

Simply returns ∗this. (This iterator does not *move*.)

Definition at line 764 of file bits/stl_iterator.h.

4.490.4.3 template<typename _Container > constexpr front_insert_iterator std::front_insert_iterator< _Container >::operator++ (int) [inline]

Simply returns ∗this. (This iterator does not *move*.)

Definition at line 770 of file bits/stl_iterator.h.

4.490.4.4 template<typename _Container > constexpr front_insert_iterator& std::front_insert_iterator< _Container >::operator= (const typename _Container::value_type & *__value*) [inline]

Parameters

__value	An instance of whatever type container_type::const_reference is; presumably a reference-to-const T for container<T>.

Returns

This iterator, for chained operations.

This kind of iterator doesn't really have a *position* in the container (you can think of the position as being permanently at the front, if you like). Assigning a value to the iterator will always prepend the value to the front of the container.

Definition at line 740 of file bits/stl_iterator.h.

The documentation for this class was generated from the following file:

- bits/stl_iterator.h

4.491.1 Detailed Description

template<typename _Res, typename... _ArgTypes>class std::function< _Res(_ArgTypes...)>

Primary class template for std::function.

Polymorphic function wrapper.

Definition at line 303 of file std_function.h.

4.491.2 Constructor & Destructor Documentation

4.491.2.1 template<typename _Res , typename... _ArgTypes> std::function< _Res(_ArgTypes...)>::function ( ) [inline], [noexcept]

Default construct creates an empty function call wrapper.

Postcondition

! (bool)*this

Definition at line 330 of file std_function.h.

4.491.2.2 template<typename _Res , typename... _ArgTypes> std::function< _Res(_ArgTypes...)>::function (nullptr_t) [inline], [noexcept]

Creates an empty function call wrapper.

Postcondition

! (bool)*this

Definition at line 337 of file std_function.h.

4.491.2.3 template<typename _Res , typename... _ArgTypes> std::function< _Res(_ArgTypes...)>::function (const function< _Res(_ArgTypes...)> & __x)

Function copy constructor.

Parameters

__x	A function object with identical call signature.

Postcondition

`bool(*this)` == bool(__x)

The newly-created function contains a copy of the target of __x (if it has one).

Definition at line 588 of file std_function.h.

4.491.2.4 template<typename _Res , typename... _ArgTypes> std::function< _Res(_ArgTypes...)>::function (function< _Res(_ArgTypes...)> && __x) [inline], [noexcept]

Function move constructor.

Parameters

__x	A function object rvalue with identical call signature.

The newly-created function contains the target of *__x* (if it has one).

Definition at line 357 of file std_function.h.

4.491.2.5 template<typename _Res , typename... _ArgTypes> template<typename _Functor , typename , typename > std::function< _Res(_ArgTypes...)>::function (_Functor __f)

Builds a function that targets a copy of the incoming function object.

Parameters

__f	A function object that is callable with parameters of type `T1`, `T2`, ..., `TN` and returns a value convertible to `Res`.

The newly-created function object will target a copy of *__f*. If *__f* is `reference_wrapper<F>`, then this function object will contain a reference to the function object `__f.get()`. If *__f* is a NULL function pointer or NULL pointer-to-member, the newly-created object will be empty.

If *__f* is a non-NULL function pointer or an object of type `reference_wrapper<F>`, this function will not throw.

Definition at line 602 of file std_function.h.

References std::move().

4.491.3 Member Function Documentation

4.491.3.1 template<typename _Res , typename... _ArgTypes> std::function< _Res(_ArgTypes...)>::operator bool ( ) const [inline],[explicit],[noexcept]

Determine if the function wrapper has a target.

Returns

`true` when this function object contains a target, or `false` when it is empty.

This function will not throw an exception.

Definition at line 498 of file std_function.h.

4.491.3.2 template<typename _Res , typename... _ArgTypes> _Res std::function< _Res(_ArgTypes...)>::operator() (_ArgTypes... *__args*) const

Invokes the function targeted by `*this`.

Returns

the result of the target.

Exceptions

bad_function_call	when !(bool)*this

The function call operator invokes the target function object stored by `this`.

Definition at line 618 of file std_function.h.

4.491.3.3 template<typename _Res , typename... _ArgTypes> function& std::function< _Res(_ArgTypes...)>::operator= (const function< _Res(_ArgTypes...)> & __x) [inline]

Function assignment operator.

Parameters

__x	A function with identical call signature.

Postcondition

(bool)*this == (bool)x

Returns

*this

The target of *__x* is copied to *this. If *__x* has no target, then *this will be empty.

If *__x* targets a function pointer or a reference to a function object, then this operation will not throw an exception.

Definition at line 396 of file std_function.h.

4.491.3.4 template<typename _Res , typename... _ArgTypes> function& std::function< _Res(_ArgTypes...)>::operator= (function< _Res(_ArgTypes...)> && *__x*) [inline], [noexcept]

Function move-assignment operator.

Parameters

__x	A function rvalue with identical call signature.

Returns

*this

The target of *__x* is moved to *this. If *__x* has no target, then *this will be empty.

If *__x* targets a function pointer or a reference to a function object, then this operation will not throw an exception.

Definition at line 414 of file std_function.h.

References std::move().

4.491.3.5 template<typename _Res , typename... _ArgTypes> function& std::function< _Res(_ArgTypes...)>::operator= (nullptr_t) [inline], [noexcept]

Function assignment to zero.

Postcondition

! (bool)*this

Returns

*this

The target of *this is deallocated, leaving it empty.

Definition at line 428 of file std_function.h.

4.491.3.6 template<typename _Res , typename... _ArgTypes> template<typename _Functor > _Requires<_Callable<typename decay<_Functor>::type>, function&> std::function< _Res(_ArgTypes...)>::operator= (_Functor && *__f*) [inline]

Function assignment to a new target.

Parameters

__f	A function object that is callable with parameters of type `T1`, `T2`, ..., `TN` and returns a value convertible to `Res`.

Returns

`*this`

This function object wrapper will target a copy of *__f*. If *__f* is `reference_wrapper<F>`, then this function object will contain a reference to the function object `__f.get()`. If *__f* is a NULL function pointer or NULL pointer-to-member, `this` object will be empty.

If *__f* is a non-NULL function pointer or an object of type `reference_wrapper<F>`, this function will not throw.

Definition at line 457 of file std_function.h.

4.491.3.7 template<typename _Res , typename... _ArgTypes> template<typename _Functor > function& std::function< _Res(_ArgTypes...)>::operator= (reference_wrapper< _Functor > __f) [inline], [noexcept]

This is an overloaded member function, provided for convenience. It differs from the above function only in what argument(s) it accepts.

Definition at line 466 of file std_function.h.

4.491.3.8 template<typename _Res , typename... _ArgTypes> void std::function< _Res(_ArgTypes...)>::swap (function< _Res(_ArgTypes...)> & __x) [inline], [noexcept]

Swap the targets of two function objects.

Parameters

__x	A function with identical call signature.

Swap the targets of `this` function object and *__f*. This function will not throw an exception.

Definition at line 481 of file std_function.h.

4.491.3.9 template<typename _Res , typename... _ArgTypes> template<typename _Functor > _Functor * std::function< _Res(_ArgTypes...)>::target ( ) [noexcept]

Access the stored target function object.

Returns

Returns a pointer to the stored target function object, if `typeid(_Functor)`.equals(target_type()); otherwise, a NULL pointer.

This function does not throw exceptions.

Definition at line 645 of file std_function.h.

4.491.3.10 template<typename _Res , typename... _ArgTypes> template<typename _Functor > const _Functor * std::function< _Res(_ArgTypes...)>::target ( ) const [noexcept]

Access the stored target function object.

Returns

Returns a pointer to the stored target function object, if `typeid(_Functor)`.equals(target_type()); otherwise, a NULL pointer.

This function does not throw exceptions.

Definition at line 656 of file std_function.h.

4.491.3.11 template<typename _Res , typename... _ArgTypes> const type_info & std::function< _Res(_ArgTypes...)>::target_type ( ) const [noexcept]

Determine the type of the target of this function object wrapper.

Returns

the type identifier of the target function object, or `typeid(void)` if ! (bool)*this.

This function will not throw an exception.

Definition at line 629 of file std_function.h.

4.492.1 Detailed Description

template<typename _Res>class std::future< _Res >

Primary template for future.

Definition at line 125 of file future.

4.492.2 Member Typedef Documentation

4.492.2.1 template<typename _Res > using std::__future_base::_Ptr = unique_ptr<_Res, _Result_base::_Deleter> [inherited]

A unique_ptr for result objects.

Definition at line 223 of file future.

4.492.3 Constructor & Destructor Documentation

4.492.3.1 template<typename _Res > std::future< _Res >::future (future< _Res > && *__uf*) [inline], [noexcept]

Move constructor.

Definition at line 782 of file future.

4.492.4 Member Function Documentation

4.492.4.1 template<typename _Res> __result_type std::__basic_future< _Res >::_M_get_result ( ) const [inline], [protected], [inherited]

Wait for the state to be ready and rethrow any stored exception.

Definition at line 717 of file future.

Referenced by std::future< _Res >::get(), std::future< _Res & >::get(), std::future< void >::get(), std::shared_future< _Res >::get(), and std::shared_future< _Res & >::get().

4.492.4.2 template<typename _Res > _Res std::future< _Res >::get ( ) [inline]

Retrieving the value.

Definition at line 796 of file future.

References std::__basic_future< _Res >::_M_get_result(), and std::move().

The documentation for this class was generated from the following file:

4.496.1 Detailed Description

template<typename _RealType = double>class std::gamma_distribution< _RealType >

A gamma continuous distribution for random numbers.

The formula for the gamma probability density function is:

$$p(x|\alpha,\beta) = \frac{1}{\beta\Gamma(\alpha)}(x/\beta)^{\alpha-1}e^{-x/\beta}$$

Definition at line 2393 of file random.h.

4.496.2 Member Typedef Documentation

4.496.2.1 template<typename _RealType = double> typedef _RealType std::gamma_distribution< _RealType >::result_type

The type of the range of the distribution.

Definition at line 2396 of file random.h.

4.496.3 Constructor & Destructor Documentation

4.496.3.1 template<typename _RealType = double> std::gamma_distribution< _RealType >::gamma_distribution ( ) [inline]

Constructs a gamma distribution with parameters 1 and 1.

Definition at line 2449 of file random.h.

4.496.3.2 template<typename _RealType = double> std::gamma_distribution< _RealType >::gamma_distribution (_RealType *__alpha_val,* _RealType *__beta_val* = _RealType(1)) [inline],[explicit]

Constructs a gamma distribution with parameters α and β.

Definition at line 2456 of file random.h.

4.496.4 Member Function Documentation

4.496.4.1 template<typename _RealType = double> _RealType std::gamma_distribution< _RealType >::alpha ( ) const [inline]

Returns the α of the distribution.

Definition at line 2477 of file random.h.

4.496.4.2 template<typename _RealType = double> _RealType std::gamma_distribution< _RealType >::beta ( ) const [inline]

Returns the β of the distribution.

Definition at line 2484 of file random.h.

4.496.4.3 template<typename _RealType = double> result_type std::gamma_distribution< _RealType >::max ( ) const [inline]

Returns the least upper bound value of the distribution.

Definition at line 2513 of file random.h.

4.496.4.4 template<typename _RealType = double> result_type std::gamma_distribution< _RealType >::min ( ) const [inline]

Returns the greatest lower bound value of the distribution.

Definition at line 2506 of file random.h.

4.496.4.5 template<typename _RealType = double> template<typename _UniformRandomNumberGenerator > gamma_distribution<_RealType>::result_type std::gamma_distribution< _RealType >::operator() (_UniformRandomNumberGenerator & *__urng,* const param_type & *__param*)

Marsaglia, G. and Tsang, W. W. "A Simple Method for Generating Gamma Variables" ACM Transactions on Mathematical Software, 26, 3, 363-372, 2000.

Definition at line 2321 of file bits/random.tcc.

References std::log(), and std::pow().

4.496.4.6 template<typename _RealType = double> template<typename _UniformRandomNumberGenerator > result_type std::gamma_distribution< _RealType >::operator() (_UniformRandomNumberGenerator & *__urng*) [inline]

Generating functions.

Definition at line 2521 of file random.h.

Referenced by std::gamma_distribution< result_type >::operator()().

4.496.4.7 template<typename _RealType = double> param_type std::gamma_distribution< _RealType >::param ( ) const [inline]

Returns the parameter set of the distribution.

Definition at line 2491 of file random.h.

Referenced by std::chi_squared_distribution< _RealType >::param().

4.496.4.8 template<typename _RealType = double> void std::gamma_distribution< _RealType >::param (const param_type & *__param*) [inline]

Sets the parameter set of the distribution.

Parameters

__param	The new parameter set of the distribution.

Definition at line 2499 of file random.h.

4.496.4.9 template<typename _RealType = double> void std::gamma_distribution< _RealType >::reset ( ) [inline]

Resets the distribution state.

Definition at line 2470 of file random.h.

Referenced by std::chi_squared_distribution< _RealType >::reset(), std::fisher_f_distribution< _RealType >::reset(), std::student_t_distribution< _RealType >::reset(), and std::negative_binomial_distribution< _IntType >::reset().

4.496.5 Friends And Related Function Documentation

4.496.5.1 template<typename _RealType = double> template<typename _RealType1 , typename _CharT , typename _Traits > std::basic_ostream<_CharT, _Traits>& operator<< (std::basic_ostream< _CharT, _Traits > & __os, const std::gamma_distribution< _RealType1 > & __x) [friend]

Inserts a gamma_distribution random number distribution __x into the output stream __os.

Parameters

__os	An output stream.
__x	A gamma_distribution random number distribution.

Returns

The output stream with the state of __x inserted or in an error state.

4.496.5.2 template<typename _RealType = double> bool operator== (const gamma_distribution< _RealType > & *__d1*, const gamma_distribution< _RealType > & *__d2*) [friend]

Return true if two gamma distributions have the same parameters and the sequences that would be generated are equal.

Definition at line 2557 of file random.h.

4.496.5.3 template<typename _RealType = double> template<typename _RealType1 , typename _CharT , typename _Traits > std::basic_istream<_CharT, _Traits>& operator>> (std::basic_istream< _CharT, _Traits > & *__is*, std::gamma_distribution< _RealType1 > & *__x*) [friend]

Extracts a gamma_distribution random number distribution __x from the input stream __is.

Parameters

__is	An input stream.
__x	A gamma_distribution random number generator engine.

Returns

The input stream with __x extracted or in an error state.

The documentation for this class was generated from the following files:

4.497.1 Detailed Description

template<typename _IntType = int>class std::geometric_distribution< _IntType >

A discrete geometric random number distribution.

The formula for the geometric probability density function is $p(i|p) = p(1-p)^i$ where p is the parameter of the distribution.

Definition at line 3969 of file random.h.

4.497.2 Member Typedef Documentation

4.497.2.1 template<typename _IntType = int> typedef _IntType std::geometric_distribution< _IntType >::result_type

The type of the range of the distribution.

Definition at line 3972 of file random.h.

4.497.3 Member Function Documentation

4.497.3.1 template<typename _IntType = int> result_type std::geometric_distribution< _IntType >::max ( ) const [inline]

Returns the least upper bound value of the distribution.

Definition at line 4071 of file random.h.

References std::numeric_limits< _Tp >::max().

4.497.3.2 template<typename _IntType = int> result_type std::geometric_distribution< _IntType >::min ( ) const [inline]

Returns the greatest lower bound value of the distribution.

Definition at line 4064 of file random.h.

4.497.3.3 template<typename _IntType = int> template<typename _UniformRandomNumberGenerator > result_type std::geometric_distribution< _IntType >::operator() (_UniformRandomNumberGenerator & *__urng*) [inline]

Generating functions.

Definition at line 4079 of file random.h.

4.497.3.4 template<typename _IntType = int> double std::geometric_distribution< _IntType >::p ( ) const [inline]

Returns the distribution parameter p.

Definition at line 4042 of file random.h.

4.497.3.5 template<typename _IntType = int> param_type std::geometric_distribution< _IntType >::param ( ) const [inline]

Returns the parameter set of the distribution.

Definition at line 4049 of file random.h.

Referenced by std::operator>>().

4.497.3.6 template<typename _IntType = int> void std::geometric_distribution< _IntType >::param (const param_type & *__param*) [inline]

Sets the parameter set of the distribution.

Parameters

__param	The new parameter set of the distribution.

Definition at line 4057 of file random.h.

4.497.3.7 template<typename _IntType = int> void std::geometric_distribution< _IntType >::reset ( ) [inline]

Resets the distribution state.

Does nothing for the geometric distribution.

Definition at line 4036 of file random.h.

4.497.4 Friends And Related Function Documentation

4.497.4.1 template<typename _IntType = int> bool operator== (const geometric_distribution< _IntType > & *__d1*, const geometric_distribution< _IntType > & *__d2*) [friend]

Return true if two geometric distributions have the same parameters.

Definition at line 4114 of file random.h.

4.498.1 Detailed Description

template<typename Key, typename Mapped, typename Hash_Fn = typename detail::default_hash_fn<Key>::type, typename Eq_Fn = typename detail::default_eq_fn<Key>::type, typename Comb_Probe_Fn = detail::default_comb_hash_fn::type, typename Probe_Fn = typename detail::default_probe_fn<Comb_Probe_Fn>::type, typename Resize_Policy = typename detail::default_resize_policy<Comb_Probe_Fn>::type, bool Store_Hash = detail::default_store_hash, typename _Alloc = std::allocator<char>>class __gnu_pbds::gp_hash_table< Key, Mapped, Hash_Fn, Eq_Fn, Comb_Probe_Fn, Probe_Fn, Resize_Policy, Store_Hash, _Alloc >

A general-probing hash-based associative container.

Template Parameters

Key	Key type.
Mapped	Map type.
Hash_Fn	Hashing functor.
Eq_Fn	Equal functor.
Comb_Probe_Fn	Combining probe functor. If Hash_Fn is not null_type, then this is the ranged-probe functor; otherwise, this is the range-hashing functor. XXX See Design::Hash-Based Containers::Hash Policies.
Probe_Fn	Probe functor.
Resize_Policy	Resizes hash.
Store_Hash	Indicates whether the hash value will be stored along with each key. If Hash_Fn is null_type, then the container will not compile if this value is true
_Alloc	Allocator type.

Base tag choices are: gp_hash_tag.

Base is basic_hash_table.

Definition at line 368 of file assoc_container.hpp.

4.498.2 Constructor & Destructor Documentation

4.500.1 Detailed Description

template<typename Key, typename Mapped, typename Hash_Fn, typename Eq_Fn, typename _Alloc, bool Store_Hash, typename Comb_Probe_Fn, typename Probe_Fn, typename Resize_Policy>class __gnu_pbds::detail::gp_ht_map< Key, Mapped, Hash_Fn, Eq_Fn, _Alloc, Store_Hash, Comb_Probe_Fn, Probe_Fn, Resize_Policy >

A general-probing hash-based container.

Template Parameters

Key	Key type.
Mapped	Map type.
Hash_Fn	Hashing functor. Default is __gnu_cxx::hash.
Eq_Fn	Equal functor. Default std::equal_to<Key>
_Alloc	Allocator type.
Store_Hash	If key type stores extra metadata. Defaults to false.
Comb_Probe_Fn	Combining probe functor. If Hash_Fn is not null_type, then this is the ranged-probe functor; otherwise, this is the range-hashing functor. XXX See Design::Hash-Based Containers::Hash Policies. Default direct_mask_range_hashing.
Probe_Fn	Probe functor. Defaults to linear_probe_fn, also quadratic_probe_fn.
Resize_Policy	Resizes hash. Defaults to hash_standard_resize_policy, using hash_exponential_size_policy and hash_load_check_resize_trigger.

Bases are: detail::hash_eq_fn, Resize_Policy, detail::ranged_probe_fn, detail::types_traits. (Optional: detail::debug_map_base.)

Definition at line 142 of file gp_ht_map_.hpp.

4.500.2 Member Enumeration Documentation

4.500.2.1 template<typename Key, typename Mapped, typename Hash_Fn, typename Eq_Fn, typename _Alloc, bool Store_Hash, typename Comb_Probe_Fn, typename Probe_Fn, typename Resize_Policy> anonymous enum

Value stores hash, true or false.

Definition at line 209 of file gp_ht_map_.hpp.

4.500.3 Member Function Documentation

4.500.3.1 template<typename Key , typename Mapped , typename Hash_Fn , typename Eq_Fn , typename _Alloc , bool Store_Hash, typename Comb_Probe_Fn , typename Probe_Fn , typename Resize_Policy > bool __gnu_pbds::detail::gp_ht_map< Key, Mapped, Hash_Fn, Eq_Fn, _Alloc, Store_Hash, Comb_Probe_Fn, Probe_Fn, Resize_Policy >::empty ( ) const [inline]

True if size() == 0.

Definition at line 61 of file gp_ht_map_.hpp.

4.500.3.2 template<typename Key , typename Mapped , typename Hash_Fn , typename Eq_Fn , typename _Alloc , bool Store_Hash, typename Comb_Probe_Fn , typename Probe_Fn , typename Resize_Policy > Comb_Probe_Fn & __gnu_pbds::detail::gp_ht_map< Key, Mapped, Hash_Fn, Eq_Fn, _Alloc, Store_Hash, Comb_Probe_Fn, Probe_Fn, Resize_Policy >::get_comb_probe_fn ( )

Return current comb_probe_fn.

Definition at line 84 of file gp_ht_map_.hpp.

- valarray< size_t > stride () const

Friends

- template<typename _Tp >
  class **valarray**

4.507.1 Detailed Description

Class defining multi-dimensional subset of an array.

The slice class represents a multi-dimensional subset of an array, specified by three parameter sets: start offset, size array, and stride array. The start offset is the index of the first element of the array that is part of the subset. The size and stride array describe each dimension of the slice. Size is the number of elements in that dimension, and stride is the distance in the array between successive elements in that dimension. Each dimension's size and stride is taken to begin at an array element described by the previous dimension. The size array and stride array must be the same size.

For example, if you have offset==3, stride[0]==11, size[1]==3, stride[1]==3, then slice[0,0]==array[3], slice[0,1]==array[6], slice[0,2]==array[9], slice[1,0]==array[14], slice[1,1]==array[17], slice[1,2]==array[20].

Definition at line 64 of file gslice.h.

Friends

- class **valarray**< **_Tp** >

4.508.1 Detailed Description

template<class _Tp>class std::gslice_array< _Tp >

Reference to multi-dimensional subset of an array.

A gslice_array is a reference to the actual elements of an array specified by a gslice. The way to get a gslice_array is to call operator[](gslice) on a valarray. The returned gslice_array then permits carrying operations out on the referenced subset of elements in the original valarray. For example, operator+=(valarray) will add values to the subset of elements in the underlying valarray this gslice_array refers to.

Parameters

Tp	Element type.

Definition at line 93 of file valarray.

The documentation for this class was generated from the following files:

- valarray
- gslice_array.h

- functional_hash.h

4.545 std::hash< unsigned long > Struct Template Reference

Inherits std::__hash_base< _Result, _Arg >.

Public Types

- typedef _Arg **argument_type**
- typedef _Result **result_type**

Public Member Functions

- size_t **operator()** (unsigned long __val) const noexcept

4.545.1 Detailed Description

template<>struct std::hash< unsigned long >

Explicit specialization for unsigned long.

Definition at line 168 of file functional_hash.h.

The documentation for this struct was generated from the following file:

- functional_hash.h

4.546 std::hash< unsigned long long > Struct Template Reference

Inherits std::__hash_base< _Result, _Arg >.

Public Types

- typedef _Arg **argument_type**
- typedef _Result **result_type**

Public Member Functions

- size_t **operator()** (unsigned long long __val) const noexcept

4.546.1 Detailed Description

template<>struct std::hash< unsigned long long >

Explicit specialization for unsigned long long.

Definition at line 171 of file functional_hash.h.

The documentation for this struct was generated from the following file:

- functional_hash.h

4.547 std::hash< unsigned short > Struct Template Reference

Inherits std::__hash_base< _Result, _Arg >.

Public Types

- typedef _Arg **argument_type**
- typedef _Result **result_type**

Public Member Functions

- size_t **operator()** (unsigned short __val) const noexcept

4.547.1 Detailed Description

template<>struct std::hash< unsigned short >

Explicit specialization for unsigned short.

Definition at line 162 of file functional_hash.h.

The documentation for this struct was generated from the following file:

- functional_hash.h

4.548 std::hash< wchar_t > Struct Template Reference

Inherits std::__hash_base< _Result, _Arg >.

Public Types

- typedef _Arg **argument_type**
- typedef _Result **result_type**

Public Member Functions

- size_t **operator()** (wchar_t __val) const noexcept

4.548.1 Detailed Description

template<>struct std::hash< wchar_t >

Explicit specialization for wchar_t.

Definition at line 136 of file functional_hash.h.

The documentation for this struct was generated from the following file:

- functional_hash.h

4.549 std::hash< wstring > Struct Template Reference

Inherits std::__hash_base< _Result, _Arg >.

Public Types

- typedef _Arg **argument_type**
- typedef _Result **result_type**

Public Member Functions

- size_t **operator()** (const wstring &__s) const noexcept

4.549.1 Detailed Description

template<>struct std::hash< wstring >

std::hash specialization for wstring.

Definition at line 6823 of file basic_string.h.

The documentation for this struct was generated from the following file:

- basic_string.h

4.550 std::hash<::bitset< _Nb > > Struct Template Reference

Inherits std::__hash_base< _Result, _Arg >.

Public Types

- typedef _Arg **argument_type**
- typedef _Result **result_type**

Public Member Functions

- size_t **operator()** (const ::bitset< _Nb > &__b) const noexcept

4.550.1 Detailed Description

template<size_t _Nb>struct std::hash<::bitset< _Nb > >

std::hash specialization for bitset.

Definition at line 1569 of file bitset.

The documentation for this struct was generated from the following file:

- bitset

4.551 std::hash<::vector< bool, _Alloc > > Struct Template Reference

Inherits std::__hash_base< _Result, _Arg >.

Public Types

- typedef _Arg **argument_type**
- typedef _Result **result_type**

Public Member Functions

- size_t **operator()** (const ::vector< bool, _Alloc > &) const noexcept

4.551.1 Detailed Description

template<typename _Alloc>struct std::hash<::vector< bool, _Alloc > >

std::hash specialization for vector<bool>.

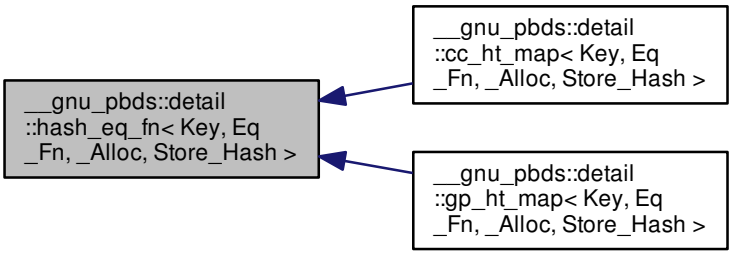
Definition at line 1351 of file stl_bvector.h.

The documentation for this struct was generated from the following files:

- stl_bvector.h
- vector.tcc

4.552 __gnu_pbds::detail::hash_eq_fn< Key, Eq_Fn, _Alloc, Store_Hash > Struct Template Reference

Inheritance diagram for __gnu_pbds::detail::hash_eq_fn< Key, Eq_Fn, _Alloc, Store_Hash >:



4.552.1 Detailed Description

template<typename Key, typename Eq_Fn, typename _Alloc, bool Store_Hash>struct __gnu_pbds::detail::hash_eq_fn< Key, Eq_Fn, _Alloc, Store_Hash >

Primary template.

Definition at line 55 of file hash_eq_fn.hpp.

The documentation for this struct was generated from the following file:

- hash_eq_fn.hpp

4.553 __gnu_pbds::detail::hash_eq_fn< Key, Eq_Fn, _Alloc, false > Struct Template Reference

Inherits Eq_Fn.

Public Types

- typedef Eq_Fn **eq_fn_base**
- typedef rebind_traits< _Alloc, Key >::const_reference **key_const_reference**

Public Member Functions

- **hash_eq_fn** (const Eq_Fn &r_eq_fn)
- bool **operator()** (key_const_reference r_lhs_key, key_const_reference r_rhs_key) const
- void **swap** (const hash_eq_fn &other)

4.553.1 Detailed Description

template<typename Key, typename Eq_Fn, typename _Alloc>struct __gnu_pbds::detail::hash_eq_fn< Key, Eq_Fn, _Alloc, false >

Specialization 1 - The client requests that hash values not be stored.

Definition at line 59 of file hash_eq_fn.hpp.

The documentation for this struct was generated from the following file:

- hash_eq_fn.hpp

4.554 __gnu_pbds::detail::hash_eq_fn< Key, Eq_Fn, _Alloc, true > Struct Template Reference

Inherits Eq_Fn.

Public Types

- typedef Eq_Fn **eq_fn_base**
- typedef rebind_traits< _Alloc, Key >::const_reference **key_const_reference**
- typedef _Alloc::size_type **size_type**

Public Member Functions

- **hash_eq_fn** (const Eq_Fn &r_eq_fn)
- bool **operator()** (key_const_reference r_lhs_key, size_type lhs_hash, key_const_reference r_rhs_key, size_type rhs_hash) const
- void **swap** (const hash_eq_fn &other)

4.554.1 Detailed Description

template<typename Key, class Eq_Fn, class _Alloc>struct __gnu_pbds::detail::hash_eq_fn< Key, Eq_Fn, _Alloc, true >

Specialization 2 - The client requests that hash values be stored.

Definition at line 82 of file hash_eq_fn.hpp.

The documentation for this struct was generated from the following file:

- hash_eq_fn.hpp

4.555 __gnu_pbds::hash_exponential_size_policy< Size_Type > Class Template Reference

Public Types

- typedef Size_Type **size_type**

Public Member Functions

- hash_exponential_size_policy (size_type start_size=8, size_type grow_factor=2)
- void **swap** (hash_exponential_size_policy< Size_Type > &other)

Protected Member Functions

- size_type **get_nearest_larger_size** (size_type size) const
- size_type **get_nearest_smaller_size** (size_type size) const

4.555.1 Detailed Description

template<typename Size_Type = std::size_t>class __gnu_pbds::hash_exponential_size_policy< Size_Type >

A size policy whose sequence of sizes form an exponential sequence (typically powers of 2.

Definition at line 413 of file hash_policy.hpp.

4.555.2 Constructor & Destructor Documentation

4.555.2.1 template<typename Size_Type > __gnu_pbds::hash_exponential_size_policy< Size_Type >::hash_exponential_size_policy (size_type *start_size* = 8, size_type *grow_factor* = 2)

Default constructor, or onstructor taking a start_size, or constructor taking a start size and grow_factor. The policy will use the sequence of sizes start_size, start_size∗ grow_factor, start_size∗ grow_factor^2, ...

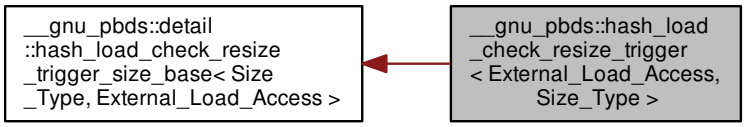
Definition at line 46 of file hash_policy.hpp.

The documentation for this class was generated from the following file:

- hash_policy.hpp

4.556 __gnu_pbds::hash_load_check_resize_trigger< External_Load_Access, Size_Type > Class Template Reference

Inheritance diagram for __gnu_pbds::hash_load_check_resize_trigger< External_Load_Access, Size_Type >:



Public Types

- enum { external_load_access }
- typedef Size_Type **size_type**

Public Member Functions

- hash_load_check_resize_trigger (float load_min=0.125, float load_max=0.5)

- std::pair< float, float > get_loads () const
- void set_loads (std::pair< float, float > load_pair)
- void **swap** (hash_load_check_resize_trigger &other)

Protected Member Functions

- bool **is_resize_needed** () const
- void notify_cleared ()
- void **notify_erase_search_collision** ()
- void **notify_erase_search_end** ()
- void **notify_erase_search_start** ()
- void **notify_erased** (size_type num_entries)
- void **notify_externally_resized** (size_type new_size)
- void **notify_find_search_collision** ()
- void **notify_find_search_end** ()
- void **notify_find_search_start** ()
- void **notify_insert_search_collision** ()
- void **notify_insert_search_end** ()
- void **notify_insert_search_start** ()
- void notify_inserted (size_type num_entries)
- void notify_resized (size_type new_size)

4.556.1 Detailed Description

template<bool External_Load_Access = false, typename Size_Type = std::size_t>class __gnu_pbds::hash_load_check_resize_trigger< External_Load_Access, Size_Type >

A resize trigger policy based on a load check. It keeps the load factor between some load factors load_min and load_max.

Definition at line 175 of file hash_policy.hpp.

4.556.2 Member Enumeration Documentation

4.556.2.1 template<bool External_Load_Access = false, typename Size_Type = std::size_t> anonymous enum

Enumerator

external_load_access Specifies whether the load factor can be accessed externally. The two options have different trade-offs in terms of flexibility, genericity, and encapsulation.

Definition at line 180 of file hash_policy.hpp.

4.556.3 Constructor & Destructor Documentation

4.556.3.1 template<bool External_Load_Access, typename Size_Type > __gnu_pbds::hash_load_check_resize_trigger< External_Load_Access, Size_Type >::hash_load_check_resize_trigger (float *load_min* = 0.125, float *load_max* = 0.5)

Default constructor, or constructor taking load_min and load_max load factors between which this policy will keep the actual load.

Definition at line 49 of file hash_policy.hpp.

4.556.4 Member Function Documentation

4.556.4.1 template<bool External_Load_Access, typename Size_Type > std::pair< float, float > __gnu_pbds::hash_load_check_resize_trigger< External_Load_Access, Size_Type >::get_loads ( ) const [inline]

Returns a pair of the minimal and maximal loads, respectively.

Definition at line 238 of file hash_policy.hpp.

4.556.4.2 template<bool External_Load_Access, typename Size_Type > void __gnu_pbds::hash_load_check_resize_trigger< External_Load_Access, Size_Type >::notify_cleared ( ) [protected]

Notifies the table was cleared.

Definition at line 208 of file hash_policy.hpp.

4.556.4.3 template<bool External_Load_Access, typename Size_Type > void __gnu_pbds::hash_load_check_resize_trigger< External_Load_Access, Size_Type >::notify_inserted (size_type *num_entries*) [inline], [protected]

Notifies an element was inserted. The total number of entries in the table is num_entries.

Definition at line 111 of file hash_policy.hpp.

4.556.4.4 template<bool External_Load_Access, typename Size_Type > void __gnu_pbds::hash_load_check_resize_trigger< External_Load_Access, Size_Type >::notify_resized (size_type *new_size*) [protected]

Notifies the table was resized as a result of this object's signifying that a resize is needed.

Definition at line 153 of file hash_policy.hpp.

4.556.4.5 template<bool External_Load_Access, typename Size_Type > void __gnu_pbds::hash_load_check_resize_trigger< External_Load_Access, Size_Type >::set_loads (std::pair< float, float > *load_pair*)

Sets the loads through a pair of the minimal and maximal loads, respectively.

Definition at line 247 of file hash_policy.hpp.

The documentation for this class was generated from the following file:

- hash_policy.hpp

4.557 __gnu_pbds::detail::hash_load_check_resize_trigger_size_base< Size_Type, Hold_Size > Class Template Reference

4.557.1 Detailed Description

template<typename Size_Type, bool Hold_Size>class __gnu_pbds::detail::hash_load_check_resize_trigger_size_base< Size_Type, Hold_Size >

Primary template.

Definition at line 50 of file hash_load_check_resize_trigger_size_base.hpp.

The documentation for this class was generated from the following file:

- hash_load_check_resize_trigger_size_base.hpp

4.558 __gnu_pbds::detail::hash_load_check_resize_trigger_size_base< Size_Type, true > Class Template Reference

Protected Types

4.564.1 Detailed Description

template<typename Size_Policy = hash_exponential_size_policy<>, typename Trigger_Policy = hash_load_check_resize_trigger<>, bool External_Size_Access = false, typename Size_Type = std::size_t>class __gnu_pbds::hash_standard_resize_policy< Size_Policy, Trigger_Policy, External_Size_Access, Size_Type >

A resize policy which delegates operations to size and trigger policies.

Definition at line 489 of file hash_policy.hpp.

4.564.2 Constructor & Destructor Documentation

4.564.2.1 template<typename Size_Policy , typename Trigger_Policy , bool External_Size_Access, typename Size_Type > __gnu_pbds::hash_standard_resize_policy< Size_Policy, Trigger_Policy, External_Size_Access, Size_Type >::hash_standard_resize_policy ( )

Default constructor.

Definition at line 46 of file hash_policy.hpp.

4.564.2.2 template<typename Size_Policy, typename Trigger_Policy , bool External_Size_Access, typename Size_Type > __gnu_pbds::hash_standard_resize_policy< Size_Policy, Trigger_Policy, External_Size_Access, Size_Type >::hash_standard_resize_policy (const Size_Policy & *r_size_policy*)

constructor taking some policies r_size_policy will be copied by the Size_Policy object of this object.

Definition at line 52 of file hash_policy.hpp.

4.564.2.3 template<typename Size_Policy, typename Trigger_Policy, bool External_Size_Access, typename Size_Type > __gnu_pbds::hash_standard_resize_policy< Size_Policy, Trigger_Policy, External_Size_Access, Size_Type >::hash_standard_resize_policy (const Size_Policy & *r_size_policy,* const Trigger_Policy & *r_trigger_policy*)

constructor taking some policies. r_size_policy will be copied by the Size_Policy object of this object. r_trigger_policy will be copied by the Trigger_Policy object of this object.

Definition at line 58 of file hash_policy.hpp.

4.564.3 Member Function Documentation

4.564.3.1 template<typename Size_Policy , typename Trigger_Policy , bool External_Size_Access, typename Size_Type > hash_standard_resize_policy< Size_Policy, Trigger_Policy, External_Size_Access, Size_Type >::size_type __gnu_pbds::hash_standard_resize_policy< Size_Policy, Trigger_Policy, External_Size_Access, Size_Type >::get_actual_size ( ) const [inline]

Returns the actual size of the container.

Definition at line 179 of file hash_policy.hpp.

4.564.3.2 template<typename Size_Policy , typename Trigger_Policy , bool External_Size_Access, typename Size_Type > hash_standard_resize_policy< Size_Policy, Trigger_Policy, External_Size_Access, Size_Type >::size_type __gnu_pbds::hash_standard_resize_policy< Size_Policy, Trigger_Policy, External_Size_Access, Size_Type >::get_new_size (size_type *size,* size_type *num_used_e*) const [protected]

Queries what the new size should be, when the container is resized naturally. The current __size of the container is size, and the number of used entries within the container is num_used_e.

Definition at line 160 of file hash_policy.hpp.

4.564.3.3 template<typename Size_Policy , typename Trigger_Policy , bool External_Size_Access, typename Size_Type > Size_Policy & __gnu_pbds::hash_standard_resize_policy< Size_Policy, Trigger_Policy, External_Size_Access, Size_Type >::get_size_policy ( )

Access to the Size_Policy object used.

Definition at line 244 of file hash_policy.hpp.

4.564.3.4 template<typename Size_Policy , typename Trigger_Policy , bool External_Size_Access, typename Size_Type > const Size_Policy & __gnu_pbds::hash_standard_resize_policy< Size_Policy, Trigger_Policy, External_Size_Access, Size_Type >::get_size_policy ( ) const

Const access to the Size_Policy object used.

Definition at line 250 of file hash_policy.hpp.

4.564.3.5 template<typename Size_Policy , typename Trigger_Policy , bool External_Size_Access, typename Size_Type > Trigger_Policy & __gnu_pbds::hash_standard_resize_policy< Size_Policy, Trigger_Policy, External_Size_Access, Size_Type >::get_trigger_policy ( )

Access to the Trigger_Policy object used.

Definition at line 232 of file hash_policy.hpp.

4.564.3.6 template<typename Size_Policy , typename Trigger_Policy , bool External_Size_Access, typename Size_Type > const Trigger_Policy & __gnu_pbds::hash_standard_resize_policy< Size_Policy, Trigger_Policy, External_Size_Access, Size_Type >::get_trigger_policy ( ) const

Access to the Trigger_Policy object used.

Definition at line 238 of file hash_policy.hpp.

4.564.3.7 template<typename Size_Policy , typename Trigger_Policy , bool External_Size_Access, typename Size_Type > void __gnu_pbds::hash_standard_resize_policy< Size_Policy, Trigger_Policy, External_Size_Access, Size_Type >::resize (size_type *suggested_new_size*)

Resizes the container to suggested_new_size, a suggested size (the actual size will be determined by the Size_Policy object).

Definition at line 188 of file hash_policy.hpp.

The documentation for this class was generated from the following file:

4.565 std::locale::id Class Reference

Public Member Functions

- id ()
- size_t **_M_id** () const throw ()

Friends

- template<typename _Facet >
  bool has_facet (const locale &) throw ()
- class **locale**

- class **locale::_Impl**
- template<typename _Facet >
  const _Facet & use_facet (const locale &)

4.565.1 Detailed Description

Facet ID class.

The ID class provides facets with an index used to identify them. Every facet class must define a public static member locale::id, or be derived from a facet that provides this member, otherwise the facet cannot be used in a locale. The locale::id ensures that each class type gets a unique identifier.

Definition at line 485 of file locale_classes.h.

4.565.2 Constructor & Destructor Documentation

4.565.2.1 std::locale::id::id ( ) [inline]

Constructor.

Definition at line 516 of file locale_classes.h.

4.565.3 Friends And Related Function Documentation

4.565.3.1 template<typename _Facet > bool has_facet (const locale &) throw) [friend]

Test for the presence of a facet.

has_facet tests the locale argument for the presence of the facet type provided as the template parameter. Facets derived from the facet parameter will also return true.

Template Parameters

_Facet	The facet type to test the presence of.

Parameters

__loc	The locale to test.

Returns

true if __loc contains a facet of type _Facet, else false.

Definition at line 104 of file locale_classes.tcc.

4.565.3.2 template<typename _Facet > const _Facet& use_facet (const locale &) [friend]

Return a facet.

use_facet looks for and returns a reference to a facet of type Facet where Facet is the template parameter. If has_facet(locale) is true, there is a suitable facet to return. It throws std::bad_cast if the locale doesn't contain a facet of type Facet.

Template Parameters

_Facet	The facet type to access.

Parameters

__loc	The locale to use.

Returns

Reference to facet of type Facet.

Exceptions

std::bad_cast	if `__loc` doesn't contain a facet of type _Facet.

Definition at line 132 of file locale_classes.tcc.

The documentation for this class was generated from the following file:

- locale_classes.h

4.568.1 Detailed Description

template<typename _RandomNumberEngine, size_t __w, typename _UIntType>class std::independent_bits_engine< _Random-NumberEngine, __w, _UIntType >

Produces random numbers by combining random numbers from some base engine to produce random numbers with a specifies number of bits __w.

Definition at line 1096 of file random.h.

4.568.2 Member Typedef Documentation

4.568.2.1 template<typename _RandomNumberEngine, size_t __w, typename _UIntType> typedef _UIntType std::independent_bits_engine< _RandomNumberEngine, __w, _UIntType >::result_type

The type of the generated random value.

Definition at line 1109 of file random.h.

4.568.3 Constructor & Destructor Documentation

4.568.3.1 template<typename _RandomNumberEngine, size_t __w, typename _UIntType> std::independent_bits_engine< _RandomNumberEngine, __w, _UIntType >::independent_bits_engine ( ) [inline]

Constructs a default independent_bits_engine engine.

The underlying engine is default constructed as well.

Definition at line 1116 of file random.h.

4.568.3.2 template<typename _RandomNumberEngine, size_t __w, typename _UIntType> std::independent_bits_engine< _RandomNumberEngine, __w, _UIntType >::independent_bits_engine (const _RandomNumberEngine & *__rng*) [inline], [explicit]

Copy constructs a independent_bits_engine engine.

Copies an existing base class random number generator.

Parameters

__rng	An existing (base class) engine object.

Definition at line 1126 of file random.h.

4.568.3.3 template<typename _RandomNumberEngine, size_t __w, typename _UIntType> std::independent_bits_engine< _RandomNumberEngine, __w, _UIntType >::independent_bits_engine (_RandomNumberEngine && *__rng*) [inline], [explicit]

Move constructs a independent_bits_engine engine.

Copies an existing base class random number generator.

Parameters

__rng	An existing (base class) engine object.

Definition at line 1136 of file random.h.

4.568.3.4 template<typename _RandomNumberEngine, size_t __w, typename _UIntType> std::independent_bits_engine< _RandomNumberEngine, __w, _UIntType >::independent_bits_engine (result_type *__s*) [inline], [explicit]

Seed constructs a independent_bits_engine engine.

Constructs the underlying generator engine seeded with __s.

Parameters

__s	A seed value for the base class engine.

Definition at line 1146 of file random.h.

4.568.3.5 template<typename _RandomNumberEngine, size_t __w, typename _UIntType> template<typename _Sseq , typename = _If_seed_seq<_Sseq>> std::independent_bits_engine< _RandomNumberEngine, __w, _UIntType >::independent_bits_engine (_Sseq & *__q*) [inline], [explicit]

Generator construct a independent_bits_engine engine.

Parameters

__q	A seed sequence.

Definition at line 1156 of file random.h.

4.568.4 Member Function Documentation

4.568.4.1 template<typename _RandomNumberEngine, size_t __w, typename _UIntType> const _RandomNumberEngine& std::independent_bits_engine< _RandomNumberEngine, __w, _UIntType >::base ( ) const [inline], [noexcept]

Gets a const reference to the underlying generator engine object.

Definition at line 1191 of file random.h.

Referenced by std::operator<<().

4.568.4.2 template<typename _RandomNumberEngine, size_t __w, typename _UIntType> void std::independent_bits_engine< _RandomNumberEngine, __w, _UIntType >::discard (unsigned long long *__z*) [inline]

Discard a sequence of random numbers.

Definition at line 1212 of file random.h.

4.568.4.3 template<typename _RandomNumberEngine, size_t __w, typename _UIntType> static constexpr result_type std::independent_bits_engine< _RandomNumberEngine, __w, _UIntType >::max ( ) [inline], [static]

Gets the maximum value in the generated random number range.

Definition at line 1205 of file random.h.

4.568.4.4 template<typename _RandomNumberEngine, size_t __w, typename _UIntType> static constexpr result_type std::independent_bits_engine< _RandomNumberEngine, __w, _UIntType >::min ( ) [inline], [static]

Gets the minimum value in the generated random number range.

Definition at line 1198 of file random.h.

4.568.4.5 template<typename _RandomNumberEngine , size_t __w, typename _UIntType > independent_bits_engine< _RandomNumberEngine, __w, _UIntType >::result_type std::independent_bits_engine< _RandomNumberEngine, __w, _UIntType >::operator() ( )

Gets the next value in the generated random number sequence.

Definition at line 737 of file bits/random.tcc.

References std::__lg(), std::numeric_limits< _Tp >::max(), and std::numeric_limits< _Tp >::min().

4.568.4.6 template<typename _RandomNumberEngine, size_t __w, typename _UIntType> void std::independent_bits_engine< _RandomNumberEngine, __w, _UIntType >::seed ( ) [inline]

Reseeds the independent_bits_engine object with the default seed for the underlying base class generator engine.

Definition at line 1165 of file random.h.

4.568.4.7 template<typename _RandomNumberEngine, size_t __w, typename _UIntType> void std::independent_bits_engine< _RandomNumberEngine, __w, _UIntType >::seed (result_type __s) [inline]

Reseeds the independent_bits_engine object with the default seed for the underlying base class generator engine.

Definition at line 1173 of file random.h.

4.568.4.8 template<typename _RandomNumberEngine, size_t __w, typename _UIntType> template<typename _Sseq > _If_seed_seq<_Sseq> std::independent_bits_engine< _RandomNumberEngine, __w, _UIntType >::seed (_Sseq & __q) [inline]

Reseeds the independent_bits_engine object with the given seed sequence.

Parameters

__q	A seed generator function.

Definition at line 1183 of file random.h.

4.568.5 Friends And Related Function Documentation

4.568.5.1 template<typename _RandomNumberEngine, size_t __w, typename _UIntType> bool operator== (const independent_bits_engine< _RandomNumberEngine, __w, _UIntType > & *__lhs,* const independent_bits_engine< _RandomNumberEngine, __w, _UIntType > & *__rhs*) [friend]

Compares two independent_bits_engine random number generator objects of the same type for equality.

Parameters

__lhs	A independent_bits_engine random number generator object.
__rhs	Another independent_bits_engine random number generator object.

Returns

true if the infinite sequences of generated values would be equal, false otherwise.

Definition at line 1237 of file random.h.

4.568.5.2 template<typename _RandomNumberEngine, size_t __w, typename _UIntType> template<typename _CharT , typename _Traits > std::basic_istream<_CharT, _Traits>& operator>> (std::basic_istream< _CharT, _Traits > & *__is,* std::independent_bits_engine< _RandomNumberEngine, __w, _UIntType > & *__x*) [friend]

Extracts the current state of a % subtract_with_carry_engine random number generator engine __x from the input stream __is.

Parameters

__is	An input stream.
__x	A independent_bits_engine random number generator engine.

Returns

The input stream with the state of __x extracted or in an error state.

Definition at line 1255 of file random.h.

- class **valarray**< **_Tp** >

4.569.1 Detailed Description

template<class _Tp>class std::indirect_array< _Tp >

Reference to arbitrary subset of an array.

An indirect_array is a reference to the actual elements of an array specified by an ordered array of indices. The way to get an indirect_array is to call operator[](valarray<size_t>) on a valarray. The returned indirect_array then permits carrying operations out on the referenced subset of elements in the original valarray.

For example, if an indirect_array is obtained using the array (4,2,0) as an argument, and then assigned to an array containing (1,2,3), then the underlying array will have array[0]==3, array[2]==2, and array[4]==1.

Parameters

Tp	Element type.

Definition at line 95 of file valarray.

The documentation for this class was generated from the following files:

- valarray
- indirect_array.h

- constexpr insert_iterator & **operator=** (typename _Container::value_type &&__value)

Protected Attributes

- _Container * **container**
- _Iter **iter**

4.573.1 Detailed Description

template<typename _Container>class std::insert_iterator< _Container >

Turns assignment into insertion.

These are output iterators, constructed from a container-of-T. Assigning a T to the iterator inserts it in the container at the iterator's position, rather than overwriting the value at that position.

(Sequences will actually insert a *copy* of the value before the iterator's position.)

Tip: Using the inserter function to create these iterators can save typing.

Definition at line 806 of file bits/stl_iterator.h.

4.573.2 Member Typedef Documentation

4.573.2.1 template<typename _Container> typedef _Container std::insert_iterator< _Container >::container_type

A nested typedef for the type of whatever container you used.

Definition at line 825 of file bits/stl_iterator.h.

4.573.2.2 typedef void std::iterator< output_iterator_tag , void , void , void , void >::difference_type [inherited]

Distance between iterators is represented as this type.

Definition at line 134 of file stl_iterator_base_types.h.

4.573.2.3 typedef output_iterator_tag std::iterator< output_iterator_tag , void , void , void , void >::iterator_category [inherited]

One of the tag types.

Definition at line 130 of file stl_iterator_base_types.h.

4.573.2.4 typedef void std::iterator< output_iterator_tag , void , void , void , void >::pointer [inherited]

This type represents a pointer-to-value_type.

Definition at line 136 of file stl_iterator_base_types.h.

4.573.2.5 typedef void std::iterator< output_iterator_tag , void , void , void , void >::reference [inherited]

This type represents a reference-to-value_type.

Definition at line 138 of file stl_iterator_base_types.h.

4.573.2.6 typedef void std::iterator< output_iterator_tag , void , void , void , void >::value_type [inherited]

The type "pointed to" by the iterator.

Definition at line 132 of file stl_iterator_base_types.h.

4.573.3 Constructor & Destructor Documentation

4.573.3.1 template<typename _Container> constexpr std::insert_iterator< _Container >::insert_iterator (_Container & *__x*, _Iter *__i*) [inline]

The only way to create this iterator is with a container and an initial position (a normal iterator into the container).

Definition at line 838 of file bits/stl_iterator.h.

4.573.4 Member Function Documentation

4.573.4.1 template<typename _Container> constexpr insert_iterator& std::insert_iterator< _Container >::operator* ( ) [inline]

Simply returns *this.

Definition at line 895 of file bits/stl_iterator.h.

4.573.4.2 template<typename _Container> constexpr insert_iterator& std::insert_iterator< _Container >::operator++ ( ) [inline]

Simply returns *this. (This iterator does not *move*.)

Definition at line 901 of file bits/stl_iterator.h.

4.573.4.3 template<typename _Container> constexpr insert_iterator& std::insert_iterator< _Container >::operator++ (int) [inline]

Simply returns *this. (This iterator does not *move*.)

Definition at line 907 of file bits/stl_iterator.h.

4.573.4.4 template<typename _Container> constexpr insert_iterator& std::insert_iterator< _Container >::operator= (const typename _Container::value_type & *__value*) [inline]

Parameters

__value	An instance of whatever type container_type::const_reference is; presumably a reference-to-const T for container<T>.

Returns

This iterator, for chained operations.

This kind of iterator maintains its own position in the container. Assigning a value to the iterator will insert the value into the container at the place before the iterator.

The position is maintained such that subsequent assignments will insert values immediately after one another. For example,

```
// vector v contains A and Z

insert_iterator i (v, ++v.begin());
i = 1;
i = 2;
i = 3;

// vector v contains A, 1, 2, 3, and Z
```

Definition at line 875 of file bits/stl_iterator.h.

4.577.1 Detailed Description

The base of the I/O class hierarchy.

This class defines everything that can be defined about I/O that does not depend on the type of characters being input or output. Most people will only see `ios_base` when they need to specify the full name of the various I/O flags (e.g., the openmodes).

Definition at line 228 of file ios_base.h.

4.577.2 Member Typedef Documentation

4.577.2.1 typedef void(* std::ios_base::event_callback)(event __e, ios_base &__b, int __i)

The type of an event callback function.

Parameters

__e	One of the members of the event enum.
__b	Reference to the ios_base object.
__i	The integer provided when the callback was registered.

Event callbacks are user defined functions that get called during several ios_base and basic_ios functions, specifically imbue(), copyfmt(), and ~ios().

Definition at line 529 of file ios_base.h.

4.577.2.2 typedef _Ios_Fmtflags std::ios_base::fmtflags

This is a bitmask type.

_Ios_Fmtflags is implementation-defined, but it is valid to perform bitwise operations on these values and expect the Right Thing to happen. Defined objects of type fmtflags are:

- boolalpha
- dec
- fixed
- hex
- internal

- left
- oct
- right
- scientific
- showbase
- showpoint
- showpos
- skipws
- unitbuf
- uppercase
- adjustfield
- basefield
- floatfield

Definition at line 341 of file ios_base.h.

4.577.2.3 typedef _Ios_Iostate std::ios_base::iostate

This is a bitmask type.

_Ios_Iostate is implementation-defined, but it is valid to perform bitwise operations on these values and expect the Right Thing to happen. Defined objects of type iostate are:

- badbit
- eofbit
- failbit
- goodbit

Definition at line 416 of file ios_base.h.

4.577.2.4 typedef _Ios_Openmode std::ios_base::openmode

This is a bitmask type.

_Ios_Openmode is implementation-defined, but it is valid to perform bitwise operations on these values and expect the Right Thing to happen. Defined objects of type openmode are:

- app
- ate
- binary
- in
- out
- trunc

Definition at line 447 of file ios_base.h.

4.577.2.5 typedef _Ios_Seekdir std::ios_base::seekdir

This is an enumerated type.

_Ios_Seekdir is implementation-defined. Defined values of type seekdir are:

- beg
- cur, equivalent to SEEK_CUR in the C standard library.
- end, equivalent to SEEK_END in the C standard library.

Definition at line 479 of file ios_base.h.

4.577.3 Member Enumeration Documentation

4.577.3.1 enum std::ios_base::event

The set of events that may be passed to an event callback.

erase_event is used during ~ios() and copyfmt(). imbue_event is used during imbue(). copyfmt_event is used during copyfmt().

Definition at line 512 of file ios_base.h.

4.577.4 Constructor & Destructor Documentation

4.577.4.1 virtual std::ios_base::~ios_base ( ) [virtual]

Invokes each callback with erase_event. Destroys local storage.

Note that the ios_base object for the standard streams never gets destroyed. As a result, any callbacks registered with the standard streams will not get invoked with erase_event (unless copyfmt is used).

4.577.5 Member Function Documentation

4.577.5.1 const locale& std::ios_base::_M_getloc ( ) const [inline]

Locale access.

Returns

A reference to the current locale.

Like getloc above, but returns a reference instead of generating a copy.

Definition at line 804 of file ios_base.h.

Referenced by std::time_get< _CharT, _InIter >::do_get(), std::money_get< _CharT, _InIter >::do_get(), std::num_get< _CharT, _InIter >::do_get(), std::time_get< _CharT, _InIter >::do_get_date(), std::time_get< _CharT, _InIter >::do_get_monthname(), std::time_get< _CharT, _InIter >::do_get_time(), std::time_get< _CharT, _InIter >::do_get_weekday(), std::time_put< _CharT, _OutIter >::do_put(), std::num_put< _CharT, _OutIter >::do_put(), std::time_get< _CharT, _InIter >::get(), and std::time_put< _CharT, _OutIter >::put().

4.577.5.2 fmtflags std::ios_base::flags ( ) const [inline]

Access to format flags.

Returns

The format control flags for both input and output.

Definition at line 649 of file ios_base.h.

Referenced by std::basic_ios< _CharT, _Traits >::copyfmt(), std::num_get< _CharT, _InIter >::do_get(), std::num_put< _CharT, _OutIter >::do_put(), std::basic_ostream< _CharT, _Traits >::operator<<(), std::operator<<(), std::__detail::operator>>(), std::operator>>(), and std::basic_istream< _CharT, _Traits >::sentry::sentry().

4.577.5.3 fmtflags std::ios_base::flags (fmtflags *__fmtfl*) [inline]

Setting new format flags all at once.

Parameters

__fmtfl	The new flags to set.

Returns

The previous format control flags.

This function overwrites all the format flags with *__fmtfl*.

Definition at line 660 of file ios_base.h.

4.577.5.4 locale std::ios_base::getloc ( ) const [inline]

Locale access.

Returns

A copy of the current locale.

If `imbue(loc)` has previously been called, then this function returns `loc`. Otherwise, it returns a copy of `std::locale()`, the global C++ locale.

Definition at line 793 of file ios_base.h.

Referenced by std::basic_ios< _CharT, _Traits >::copyfmt(), std::money_put< _CharT, _OutIter >::do_put(), std::operator>>(), and std::ws().

4.577.5.5 locale std::ios_base::imbue (const locale & *__loc*) throw)

Setting a new locale.

Parameters

__loc	The new locale.

Returns

The previous locale.

Sets the new locale for this stream, and then invokes each callback with imbue_event.

Referenced by std::basic_ios< _CharT, _Traits >::imbue().

4.577.5.6 long& std::ios_base::iword (int __ix) [inline]

Access to integer array.

Parameters

__ix	Index into the array.

Returns

A reference to an integer associated with the index.

The iword function provides access to an array of integers that can be used for any purpose. The array grows as required to hold the supplied index. All integers in the array are initialized to 0.

The implementation reserves several indices. You should use xalloc to obtain an index that is safe to use. Also note that since the array can grow dynamically, it is not safe to hold onto the reference.

Definition at line 839 of file ios_base.h.

4.577.5.7 streamsize std::ios_base::precision ( ) const [inline]

Flags access.

Returns

The precision to generate on certain output operations.

Be careful if you try to give a definition of *precision* here; see DR 189.

Definition at line 719 of file ios_base.h.

Referenced by std::basic_ios< _CharT, _Traits >::copyfmt(), and std::operator<<().

4.577.5.8 streamsize std::ios_base::precision (streamsize *__prec*) [inline]

Changing flags.

Parameters

__prec	The new precision value.

Returns

The previous value of precision().

Definition at line 728 of file ios_base.h.

4.577.5.9 void*& std::ios_base::pword (int *__ix*) [inline]

Access to void pointer array.

Parameters

__ix	Index into the array.

Returns

A reference to a void* associated with the index.

The pword function provides access to an array of pointers that can be used for any purpose. The array grows as required to hold the supplied index. All pointers in the array are initialized to 0.

The implementation reserves several indices. You should use xalloc to obtain an index that is safe to use. Also note that since the array can grow dynamically, it is not safe to hold onto the reference.

Definition at line 860 of file ios_base.h.

4.577.5.10 void std::ios_base::register_callback (event_callback *__fn,* int *__index*)

Add the callback __fn with parameter __index.

Parameters

__fn	The function to add.
__index	The integer to pass to the function when invoked.

Registers a function as an event callback with an integer parameter to be passed to the function when invoked. Multiple copies of the function are allowed. If there are multiple callbacks, they are invoked in the order they were registered.

4.577.5.11 fmtflags std::ios_base::setf (fmtflags *__fmtfl*) [inline]

Setting new format flags.

Parameters

__fmtfl	Additional flags to set.

Returns

The previous format control flags.

This function sets additional flags in format control. Flags that were previously set remain set.

Definition at line 676 of file ios_base.h.

Referenced by std::boolalpha(), std::dec(), std::fixed(), std::hex(), std::hexfloat(), std::left(), std::oct(), std::__detail::operator>>(), std::right(), std::scientific(), std::showbase(), std::showpoint(), std::showpos(), std::skipws(), std::unitbuf(), and std::uppercase().

4.577.5.12 fmtflags std::ios_base::setf (fmtflags *__fmtfl,* fmtflags *__mask*) [inline]

Setting new format flags.

Parameters

__fmtfl	Additional flags to set.
__mask	The flags mask for *fmtfl*.

Returns

The previous format control flags.

This function clears *mask* in the format flags, then sets *fmtfl* `&` *mask*. An example mask is `ios_base::adjustfield`.

Definition at line 693 of file ios_base.h.

4.577.5.13 static bool std::ios_base::sync_with_stdio (bool *__sync* = `true`) [static]

Interaction with the standard C I/O objects.

Parameters

__sync	Whether to synchronize or not.

Returns

True if the standard streams were previously synchronized.

The synchronization referred to is *only* that between the standard C facilities (e.g., stdout) and the standard C++ objects (e.g., cout). User-declared streams are unaffected. See https://gcc.gnu.org/onlinedocs/libstdc++/manual/fstrea html#std.io.filestreams.binary

4.577.5.14 void std::ios_base::unsetf (fmtflags *__mask*) [inline]

Clearing format flags.

Parameters

__mask	The flags to unset.

This function clears *__mask* in the format flags.

Definition at line 708 of file ios_base.h.

Referenced by std::defaultfloat(), std::noboolalpha(), std::noshowbase(), std::noshowpoint(), std::noshowpos(), std::noskipws(), std::nounitbuf(), and std::nouppercase().

4.577.5.15 streamsize std::ios_base::width ( ) const [inline]

Flags access.

Returns

The minimum field width to generate on output operations.

Minimum field width refers to the number of characters.

Definition at line 742 of file ios_base.h.

Referenced by std::basic_ios< _CharT, _Traits >::copyfmt(), std::num_put< _CharT, _OutIter >::do_put(), and std::operator>>().

4.577.5.16 streamsize std::ios_base::width (streamsize *__wide*) [inline]

Changing flags.

Parameters

__wide	The new width value.

Returns

The previous value of width().

Definition at line 751 of file ios_base.h.

4.577.5.17 static int std::ios_base::xalloc ( ) throw) [static]

Access to unique indices.

Returns

An integer different from all previous calls.

This function returns a unique integer every time it is called. It can be used for any purpose, but is primarily intended to be a unique index for the iword and pword functions. The expectation is that an application calls xalloc in order to obtain an index in the iword and pword arrays that can be used without fear of conflict.

The implementation maintains a static variable that is incremented and returned on each invocation. xalloc is guaranteed to return an index that is safe to use in the iword and pword arrays.

4.577.6 Member Data Documentation

4.577.6.1 const fmtflags std::ios_base::adjustfield [static]

A mask of left|right|internal. Useful for the 2-arg form of `setf`.

Definition at line 396 of file ios_base.h.

Referenced by std::num_put< _CharT, _OutIter >::do_put(), std::internal(), std::left(), and std::right().

4.577.6.2 const openmode std::ios_base::app [static]

Seek to end before each write.

Definition at line 450 of file ios_base.h.

Referenced by std::basic_filebuf< char_type, traits_type >::_M_set_buffer(), std::basic_filebuf< _CharT, _Traits >::overflow(), and std::basic_filebuf< _CharT, _Traits >::xsputn().

4.577.6.3 const openmode std::ios_base::ate [static]

Open and seek to end immediately after opening.

Definition at line 453 of file ios_base.h.

Referenced by std::basic_filebuf< _CharT, _Traits >::open().

4.577.6.4 const iostate std::ios_base::badbit [static]

Indicates a loss of integrity in an input or output sequence (such as an irrecoverable read error from a file).

Definition at line 420 of file ios_base.h.

Referenced by std::basic_ostream< char >::_M_write(), std::basic_ios< char, char_traits< char > >::bad(), std::basic_ios< char, char_traits< char > >::fail(), std::basic_ostream< _CharT, _Traits >::flush(), std::basic_istream< _CharT, _Traits >::get(), std::basic_istream< _CharT, _Traits >::getline(), std::basic_istream< _CharT, _Traits >::ignore(), std::operator<<(), std::basic_ostream< _CharT, _Traits >::operator<<(), std::basic_istream< _CharT, _Traits >::operator>>(), std::operator>>(), std::basic_istream< _CharT, _Traits >::peek(), std::basic_ostream< _CharT, _Traits >::put(), std::basic_istream< _CharT, _Traits >::putback(), std::basic_istream< _CharT, _Traits >::read(), std::basic_istream< _CharT, _Traits >::readsome(), std::basic_istream< _CharT, _Traits >::seekg(), std::basic_ostream< _CharT, _Traits >::seekp(), std::basic_istream< _CharT, _Traits >::sentry::sentry(), std::basic_istream< _CharT, _Traits >::sync(), std::basic_istream< _CharT, _Traits >::tellg(), std::basic_ostream< _CharT, _Traits >::tellp(), std::basic_istream< _CharT, _Traits >::unget(), std::basic_ostream< _CharT, _Traits >::write(), and std::basic_ostream< _CharT, _Traits >::sentry::~sentry().

4.577.6.5 const fmtflags std::ios_base::basefield [static]

A mask of dec|oct|hex. Useful for the 2-arg form of `setf`.

Definition at line 399 of file ios_base.h.

Referenced by std::dec(), std::num_get< _CharT, _InIter >::do_get(), std::hex(), std::oct(), and std::basic_ostream< _CharT, _Traits >::operator<<().

4.577.6.6 const seekdir std::ios_base::beg [static]

Request a seek relative to the beginning of the stream.

Definition at line 482 of file ios_base.h.

Referenced by std::basic_filebuf< _CharT, _Traits >::seekpos().

4.577.6.7 const openmode std::ios_base::binary [static]

Perform input and output in binary mode (as opposed to text mode). This is probably not what you think it is; see https://gcc.gnu.org/onlinedocs/libstdc++/manual/fstreams.html#std.io.filestreams.binary.

Definition at line 458 of file ios_base.h.

Referenced by std::basic_filebuf< _CharT, _Traits >::showmanyc().

4.577.6.8 const fmtflags std::ios_base::boolalpha [static]

Insert/extract `bool` in alphabetic rather than numeric format.

Definition at line 344 of file ios_base.h.

Referenced by std::boolalpha(), std::num_get< _CharT, _InIter >::do_get(), std::num_put< _CharT, _OutIter >::do_put(), and std::noboolalpha().

4.577.6.9 const seekdir std::ios_base::cur [static]

Request a seek relative to the current position within the sequence.

Definition at line 485 of file ios_base.h.

Referenced by std::basic_filebuf< _CharT, _Traits >::imbue(), std::basic_filebuf< _CharT, _Traits >::overflow(), std::basic_filebuf< _CharT, _Traits >::pbackfail(), std::basic_stringbuf< _CharT, _Traits, _Alloc >::seekoff(), std::basic_filebuf< _CharT, _Traits >::seekoff(), std::basic_istream< _CharT, _Traits >::tellg(), and std::basic_ostream< _CharT, _Traits >::tellp().

4.577.6.10 const fmtflags std::ios_base::dec [static]

Converts integer input or generates integer output in decimal base.

Definition at line 347 of file ios_base.h.

Referenced by std::dec().

4.577.6.11 const seekdir std::ios_base::end [static]

Request a seek relative to the current end of the sequence.

Definition at line 488 of file ios_base.h.

Referenced by std::basic_filebuf< _CharT, _Traits >::open(), and std::basic_stringbuf< _CharT, _Traits, _Alloc >::seekoff().

4.577.6.12 const iostate std::ios_base::eofbit [static]

Indicates that an input operation reached the end of an input sequence.

Definition at line 423 of file ios_base.h.

Referenced by std::time_get< _CharT, _InIter >::do_get(), std::num_get< _CharT, _InIter >::do_get(), std::time_get< _CharT, _InIter >::do_get_date(), std::time_get< _CharT, _InIter >::do_get_monthname(), std::time_get< _CharT, _InIter >::do_get_time(), std::time_get< _CharT, _InIter >::do_get_weekday(), std::time_get< _CharT, _InIter >::do_get_year(), std::basic_ios< char, char_traits< char > >::eof(), std::basic_istream< _CharT, _Traits >::get(), std::time_get< _CharT, _InIter >::get(), std::basic_istream< _CharT, _Traits >::getline(), std::basic_istream< _CharT, _Traits >::ignore(), std::basic_istream< _CharT, _Traits >::operator>>(), std::operator>>(), std::basic_istream< _CharT, _Traits >::peek(), std::basic_istream< _CharT, _Traits >::putback(), std::basic_istream< _CharT, _Traits >::read(), std::basic_istream< _CharT, _Traits >::readsome(), std::basic_istream< _CharT, _Traits >::seekg(), std::basic_istream< _CharT, _Traits >::sentry::sentry(), std::basic_istream< _CharT, _Traits >::unget(), and std::ws().

4.577.6.13 const iostate std::ios_base::failbit [static]

Indicates that an input operation failed to read the expected characters, or that an output operation failed to generate the desired characters.

Definition at line 428 of file ios_base.h.

Referenced by std::basic_ifstream< _CharT, _Traits >::close(), std::basic_ofstream< _CharT, _Traits >::close(), std::basic_fstream< _CharT, _Traits >::close(), std::num_get< _CharT, _InIter >::do_get(), std::time_get< _CharT, _InIter >::do_get_monthname(), std::time_get< _CharT, _InIter >::do_get_weekday(), std::time_get< _CharT, _InIter >::do_get_year(), std::basic_ios< char, char_traits< char > >::fail(), std::basic_istream< _CharT, _Traits >::get(), std::time_get< _CharT, _InIter >::get(), std::basic_istream< _CharT, _Traits >::getline(), std::basic_ifstream< _CharT, _Traits >::open(), std::basic_ofstream< _CharT, _Traits >::open(), std::basic_fstream< _CharT, _Traits >::open(), std::basic_ostream< _CharT, _Traits >::operator<<(), std::basic_istream< _CharT, _Traits >::operator>>(), std::operator>>(), std::basic_istream< _CharT, _Traits >::read(), std::basic_istream< _CharT, _Traits >::seekg(), std::basic_ostream< _CharT, _Traits >::seekp(), std::basic_ostream< _CharT, _Traits >::sentry::sentry(), and std::basic_istream< _CharT, _Traits >::sentry::sentry().

4.577.6.14 const fmtflags std::ios_base::fixed [static]

Generate floating-point output in fixed-point notation.

Definition at line 350 of file ios_base.h.

Referenced by std::fixed(), and std::hexfloat().

4.577.6.15 const fmtflags std::ios_base::floatfield [static]

A mask of scientific|fixed. Useful for the 2-arg form of `setf`.

Definition at line 402 of file ios_base.h.

Referenced by std::defaultfloat(), std::fixed(), std::hexfloat(), and std::scientific().

4.577.6.16 const iostate std::ios_base::goodbit [static]

Indicates all is well.

Definition at line 431 of file ios_base.h.

Referenced by std::time_get< _CharT, _InIter >::do_get(), std::num_get< _CharT, _InIter >::do_get(), std::time_get< _CharT, _InIter >::do_get_monthname(), std::time_get< _CharT, _InIter >::do_get_weekday(), std::time_get< _CharT, _InIter >::do_get_year(), std::basic_ostream< _CharT, _Traits >::flush(), std::basic_istream< _CharT, _Traits >::get(), std::time_get< _CharT, _InIter >::get(), std::basic_istream< _CharT, _Traits >::getline(), std::basic_istream< _CharT, _Traits >::ignore(), std::basic_ostream< _CharT, _Traits >::operator<<(), std::basic_istream< _CharT, _Traits >::operator>>(), std::operator>>(), std::basic_istream< _CharT, _Traits >::peek(), std::basic_ostream< _CharT, _Traits >::put(), std::basic_istream< _CharT, _Traits >::putback(), std::basic_istream< _CharT, _Traits >::read(), std::basic_istream< _CharT, _Traits >::readsome(), std::basic_istream< _CharT, _Traits >::seekg(), std::basic_ostream< _CharT, _Traits >::seekp(), std::basic_istream< _CharT, _Traits >::sentry::sentry(), std::basic_istream< _CharT, _-

Traits >::sync(), and std::basic_istream< _CharT, _Traits >::unget().

4.577.6.17 const fmtflags std::ios_base::hex [static]

Converts integer input or generates integer output in hexadecimal base.

Definition at line 353 of file ios_base.h.

Referenced by std::num_get< _CharT, _InIter >::do_get(), std::num_put< _CharT, _OutIter >::do_put(), std::hex(), and std::basic_ostream< _CharT, _Traits >::operator<<().

4.577.6.18 const openmode std::ios_base::in [static]

Open for input. Default for `ifstream` and fstream.

Definition at line 461 of file ios_base.h.

Referenced by std::basic_filebuf< char_type, traits_type >::_M_set_buffer(), std::basic_ifstream< _CharT, _Traits >::open(), std::basic_stringbuf< _CharT, _Traits, _Alloc >::overflow(), std::basic_filebuf< _CharT, _Traits >::pbackfail(), std::basic_istream< _CharT, _Traits >::seekg(), std::basic_stringbuf< _CharT, _Traits, _Alloc >::seekoff(), std::basic_stringbuf< _CharT, _Traits, _Alloc >::seekpos(), std::basic_stringbuf< _CharT, _Traits, _Alloc >::showmanyc(), std::basic_filebuf< _CharT, _Traits >::showmanyc(), std::basic_istream< _CharT, _Traits >::tellg(), std::basic_stringbuf< _CharT, _Traits, _Alloc >::underflow(), std::basic_filebuf< _CharT, _Traits >::underflow(), and std::basic_filebuf< _CharT, _Traits >::xsgetn().

4.577.6.19 const fmtflags std::ios_base::internal [static]

Adds fill characters at a designated internal point in certain generated output, or identical to `right` if no such point is designated.

Definition at line 358 of file ios_base.h.

Referenced by std::internal().

4.577.6.20 const fmtflags std::ios_base::left [static]

Adds fill characters on the right (final positions) of certain generated output. (I.e., the thing you print is flush left.)

Definition at line 362 of file ios_base.h.

Referenced by std::num_put< _CharT, _OutIter >::do_put(), and std::left().

4.577.6.21 const fmtflags std::ios_base::oct [static]

Converts integer input or generates integer output in octal base.

Definition at line 365 of file ios_base.h.

Referenced by std::oct(), and std::basic_ostream< _CharT, _Traits >::operator<<().

4.577.6.22 const openmode std::ios_base::out [static]

Open for output. Default for `ofstream` and fstream.

Definition at line 464 of file ios_base.h.

Referenced by std::basic_filebuf< char_type, traits_type >::_M_set_buffer(), std::basic_ofstream< _CharT, _Traits >::open(), std::basic_stringbuf< _CharT, _Traits, _Alloc >::overflow(), std::basic_filebuf< _CharT, _Traits >::overflow(), std::basic_stringbuf< _CharT, _Traits, _Alloc >::pbackfail(), std::basic_stringbuf< _CharT, _Traits, _Alloc >::seekoff(), std::basic_ostream< _CharT, _Traits >::seekp(), std::basic_stringbuf< _CharT, _Traits, _Alloc >::seekpos(), std::basic_ostream< _CharT, _Traits >::tellp(), and std::basic_filebuf< _CharT, _Traits >::xsputn().

4.577.6.23 const fmtflags std::ios_base::right [static]

Adds fill characters on the left (initial positions) of certain generated output. (I.e., the thing you print is flush right.)

Definition at line 369 of file ios_base.h.

Referenced by std::right().

4.577.6.24 const fmtflags std::ios_base::scientific [static]

Generates floating-point output in scientific notation.

Definition at line 372 of file ios_base.h.

Referenced by std::hexfloat(), and std::scientific().

4.577.6.25 const fmtflags std::ios_base::showbase [static]

Generates a prefix indicating the numeric base of generated integer output.

Definition at line 376 of file ios_base.h.

Referenced by std::noshowbase(), and std::showbase().

4.577.6.26 const fmtflags std::ios_base::showpoint [static]

Generates a decimal-point character unconditionally in generated floating-point output.

Definition at line 380 of file ios_base.h.

Referenced by std::noshowpoint(), and std::showpoint().

4.577.6.27 const fmtflags std::ios_base::showpos [static]

Generates a + sign in non-negative generated numeric output.

Definition at line 383 of file ios_base.h.

Referenced by std::noshowpos(), and std::showpos().

4.577.6.28 const fmtflags std::ios_base::skipws [static]

Skips leading white space before certain input operations.

Definition at line 386 of file ios_base.h.

Referenced by std::noskipws(), std::basic_istream< _CharT, _Traits >::sentry::sentry(), and std::skipws().

4.577.6.29 const openmode std::ios_base::trunc [static]

Truncate an existing stream when opening. Default for `ofstream`.

Definition at line 467 of file ios_base.h.

4.577.6.30 const fmtflags std::ios_base::unitbuf [static]

Flushes output after each output operation.

Definition at line 389 of file ios_base.h.

Referenced by std::nounitbuf(), std::unitbuf(), and std::basic_ostream< _CharT, _Traits >::sentry::~sentry().

4.577.6.31 const fmtflags std::ios_base::uppercase [static]

Replaces certain lowercase letters with their uppercase equivalents in generated output.

Definition at line 393 of file ios_base.h.

Referenced by std::num_put< _CharT, _OutIter >::do_put(), std::nouppercase(), and std::uppercase().

The documentation for this class was generated from the following file:

4.608.1 Detailed Description

template<typename>struct std::is_function< typename >

is_function

Definition at line 191 of file type_traits.

The documentation for this struct was generated from the following file:

- type_traits

4.609 std::is_fundamental< _Tp > Struct Template Reference

Inherits type< is_arithmetic< _Tp >, is_void< _Tp >, is_null_pointer< _Tp > >.

4.609.1 Detailed Description

template<typename _Tp>struct std::is_fundamental< _Tp >

is_fundamental

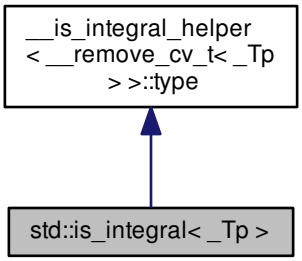
Definition at line 540 of file type_traits.

The documentation for this struct was generated from the following file:

- type_traits

4.610 std::is_integral< _Tp > Struct Template Reference

Inheritance diagram for std::is_integral< _Tp >:



Public Types

- typedef integral_constant< _Tp, __v > **type**
- typedef _Tp **value_type**

Public Member Functions

- constexpr **operator value_type** () const noexcept
- constexpr value_type **operator()** () const noexcept

Static Public Attributes

- static constexpr _Tp **value**

4.610.1 Detailed Description

template<typename _Tp>struct std::is_integral< _Tp >

is_integral

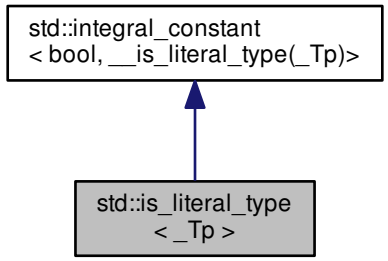
Definition at line 365 of file type_traits.

The documentation for this struct was generated from the following file:

- type_traits

4.611 std::is_literal_type< _Tp > Struct Template Reference

Inheritance diagram for std::is_literal_type< _Tp >:



Public Types

- typedef integral_constant < bool, __v > **type**
- typedef bool **value_type**

Public Member Functions

- constexpr **operator value_type** () const noexcept
- constexpr value_type **operator()** () const noexcept

Static Public Attributes

- static constexpr bool **value**

4.611.1 Detailed Description

template<typename _Tp>struct std::is_literal_type< _Tp >

is_literal_type

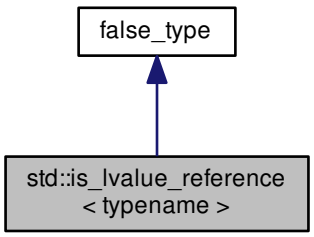
Definition at line 706 of file type_traits.

The documentation for this struct was generated from the following file:

- type_traits

4.612 std::is_lvalue_reference< typename > Struct Template Reference

Inheritance diagram for std::is_lvalue_reference< typename >:



Public Types

- typedef integral_constant< _Tp, __v > **type**
- typedef _Tp **value_type**

Public Member Functions

- constexpr **operator value_type** () const noexcept
- constexpr value_type **operator()** () const noexcept

Static Public Attributes

- static constexpr _Tp **value**

4.612.1 Detailed Description

template<typename>struct std::is_lvalue_reference< typename >

is_lvalue_reference

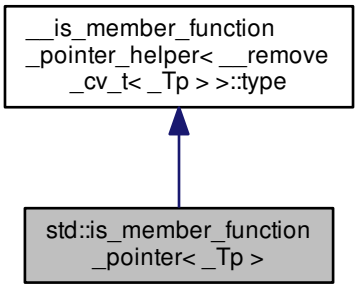
Definition at line 426 of file type_traits.

The documentation for this struct was generated from the following file:

- type_traits

4.613 std::is_member_function_pointer< _Tp > Struct Template Reference

Inheritance diagram for std::is_member_function_pointer< _Tp >:



Public Types

- typedef integral_constant< _Tp, __v > **type**
- typedef _Tp **value_type**

Public Member Functions

- constexpr **operator value_type** () const noexcept
- constexpr value_type **operator()** () const noexcept

Static Public Attributes

- static constexpr _Tp **value**

4.613.1 Detailed Description

template<typename _Tp>struct std::is_member_function_pointer< _Tp >

is_member_function_pointer

Definition at line 466 of file type_traits.

The documentation for this struct was generated from the following file:

- type_traits

4.614 std::is_member_object_pointer< _Tp > Struct Template Reference

Inherits type< __remove_cv_t< _Tp > >.

4.614.1 Detailed Description

template<typename _Tp>struct std::is_member_object_pointer< _Tp >

is_member_object_pointer

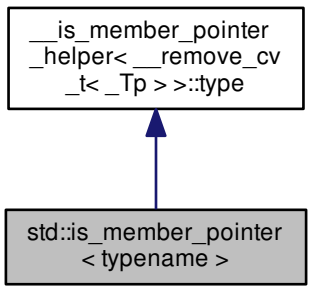
Definition at line 452 of file type_traits.

The documentation for this struct was generated from the following file:

- type_traits

4.615 std::is_member_pointer< typename > Struct Template Reference

Inheritance diagram for std::is_member_pointer< typename >:



Public Types

- typedef integral_constant< _Tp, __v > **type**

- typedef _Tp **value_type**

Public Member Functions

- constexpr **operator value_type** () const noexcept
- constexpr value_type **operator()** () const noexcept

Static Public Attributes

- static constexpr _Tp **value**

4.615.1 Detailed Description

template<typename>struct std::is_member_pointer< typename >

is_member_pointer

Definition at line 553 of file type_traits.

The documentation for this struct was generated from the following file:

- type_traits

4.616 std::is_move_assignable< _Tp > Struct Template Reference

Inherits type< _Tp >.

4.616.1 Detailed Description

template<typename _Tp>struct std::is_move_assignable< _Tp >

is_move_assignable

Definition at line 1111 of file type_traits.

The documentation for this struct was generated from the following file:

- type_traits

4.617 std::is_move_constructible< _Tp > Struct Template Reference

Inherits std::__is_move_constructible_impl< _Tp, bool >.

Inherited by std::__is_move_insertable< allocator< _Tp > >.

4.617.1 Detailed Description

template<typename _Tp>struct std::is_move_constructible< _Tp >

is_move_constructible

Definition at line 957 of file type_traits.

The documentation for this struct was generated from the following file:

- type_traits

4.618 std::is_nothrow_assignable< _Tp, _Up > Struct Template Reference

Inherits std::__is_nothrow_assignable_impl< _Tp, _Up >.

4.618.1 Detailed Description

template<typename _Tp, typename _Up>struct std::is_nothrow_assignable< _Tp, _Up >

is_nothrow_assignable

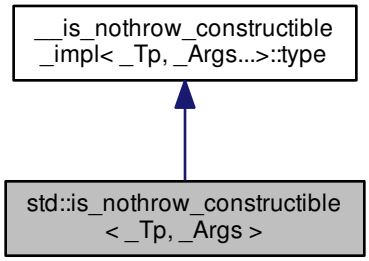
Definition at line 1131 of file type_traits.

The documentation for this struct was generated from the following file:

- type_traits

4.619 std::is_nothrow_constructible< _Tp, _Args > Struct Template Reference

Inheritance diagram for std::is_nothrow_constructible< _Tp, _Args >:



Public Types

- typedef integral_constant< _Tp, __v > **type**
- typedef _Tp **value_type**

Public Member Functions

- constexpr **operator value_type** () const noexcept
- constexpr value_type **operator()** () const noexcept

Static Public Attributes

- static constexpr _Tp **value**

4.619.1 Detailed Description

template<typename _Tp, typename... _Args>struct std::is_nothrow_constructible< _Tp, _Args >

is_nothrow_constructible

Definition at line 1008 of file type_traits.

The documentation for this struct was generated from the following file:

- type_traits

4.620 std::is_nothrow_copy_assignable< _Tp > Struct Template Reference

Inherits std::__is_nt_copy_assignable_impl< _Tp, bool >.

4.620.1 Detailed Description

template<typename _Tp>struct std::is_nothrow_copy_assignable< _Tp >

is_nothrow_copy_assignable

Definition at line 1152 of file type_traits.

The documentation for this struct was generated from the following file:

- type_traits

4.621 std::is_nothrow_copy_constructible< _Tp > Struct Template Reference

Inherits type< _Tp >.

4.621.1 Detailed Description

template<typename _Tp>struct std::is_nothrow_copy_constructible< _Tp >

is_nothrow_copy_constructible

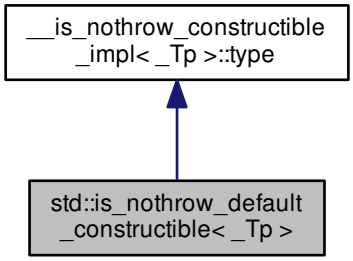
Definition at line 1039 of file type_traits.

The documentation for this struct was generated from the following file:

- type_traits

4.622 std::is_nothrow_default_constructible< _Tp > Struct Template Reference

Inheritance diagram for std::is_nothrow_default_constructible< _Tp >:



Public Types

- typedef integral_constant< _Tp, __v > **type**
- typedef _Tp **value_type**

Public Member Functions

- constexpr **operator value_type** () const noexcept

Static Public Attributes

- static constexpr _Tp **value**

4.622.1 Detailed Description

template<typename _Tp>struct std::is_nothrow_default_constructible< _Tp >

is_nothrow_default_constructible

Definition at line 1017 of file type_traits.

The documentation for this struct was generated from the following file:

- type_traits

4.623 std::is_nothrow_destructible< _Tp > Struct Template Reference

Inherits type< _Tp >.

4.623.1 Detailed Description

template<typename _Tp>struct std::is_nothrow_destructible< _Tp >

is_nothrow_destructible

Definition at line 892 of file type_traits.

The documentation for this struct was generated from the following file:

- type_traits

4.624 std::is_nothrow_move_assignable< _Tp > Struct Template Reference

Inherits std::__is_nt_move_assignable_impl< _Tp, bool >.

4.624.1 Detailed Description

template<typename _Tp>struct std::is_nothrow_move_assignable< _Tp >

is_nothrow_move_assignable

Definition at line 1173 of file type_traits.

The documentation for this struct was generated from the following file:

- type_traits

4.625 std::is_nothrow_move_constructible< _Tp > Struct Template Reference

Inherits type< _Tp >.

4.625.1 Detailed Description

template<typename _Tp>struct std::is_nothrow_move_constructible< _Tp >

is_nothrow_move_constructible

Definition at line 1060 of file type_traits.

The documentation for this struct was generated from the following file:

- type_traits

4.626 std::is_nothrow_swappable< _Tp > Struct Template Reference

Inherits type< _Tp >.

4.626.1 Detailed Description

template<typename _Tp>struct std::is_nothrow_swappable< _Tp >

is_nothrow_swappable

Definition at line 2729 of file type_traits.

The documentation for this struct was generated from the following file:

- type_traits

4.627 std::is_nothrow_swappable_with< _Tp, _Up > Struct Template Reference

Inherits type< _Tp, _Up >.

4.627.1 Detailed Description

template<typename _Tp, typename _Up>struct std::is_nothrow_swappable_with< _Tp, _Up >

is_nothrow_swappable_with

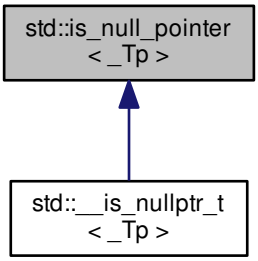
Definition at line 2816 of file type_traits.

The documentation for this struct was generated from the following file:

- type_traits

4.628 std::is_null_pointer< _Tp > Struct Template Reference

Inheritance diagram for std::is_null_pointer< _Tp >:



4.628.1 Detailed Description

template<typename _Tp>struct std::is_null_pointer< _Tp >

is_null_pointer (LWG 2247).

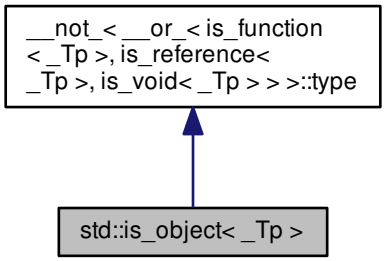
Definition at line 513 of file type_traits.

The documentation for this struct was generated from the following file:

- type_traits

4.629 std::is_object< _Tp > Struct Template Reference

Inheritance diagram for std::is_object< _Tp >:



Public Types

- typedef integral_constant< _Tp, __v > **type**
- typedef _Tp **value_type**

Public Member Functions

- constexpr **operator value_type** () const noexcept
- constexpr value_type **operator()** () const noexcept

Static Public Attributes

- static constexpr _Tp **value**

4.629.1 Detailed Description

template<typename _Tp>struct std::is_object< _Tp >

is_object

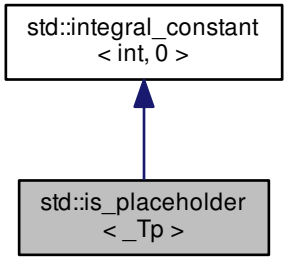
Definition at line 547 of file type_traits.

The documentation for this struct was generated from the following file:

- type_traits

4.630 std::is_placeholder< _Tp > Struct Template Reference

Inheritance diagram for std::is_placeholder< _Tp >:



Public Types

- typedef integral_constant< int, __v > **type**
- typedef int **value_type**

Public Member Functions

- constexpr **operator value_type** () const noexcept
- constexpr value_type **operator()** () const noexcept

Static Public Attributes

- static constexpr int **value**

4.630.1 Detailed Description

template<typename _Tp>struct std::is_placeholder< _Tp >

Determines if the given type _Tp is a placeholder in a bind() expression and, if so, which placeholder it is.

C++11 [func.bind.isplace].

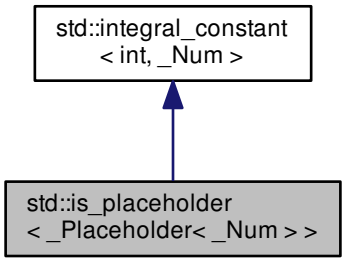
Definition at line 195 of file functional.

The documentation for this struct was generated from the following file:

- functional

4.631 std::is_placeholder< _Placeholder< _Num > > Struct Template Reference

Inheritance diagram for std::is_placeholder< _Placeholder< _Num > >:



Public Types

- typedef integral_constant< int, __v > **type**
- typedef int **value_type**

Public Member Functions

- constexpr **operator value_type** () const noexcept
- constexpr value_type **operator()** () const noexcept

Static Public Attributes

- static constexpr int **value**

4.631.1 Detailed Description

template<int _Num>struct std::is_placeholder< _Placeholder< _Num > >

Partial specialization of is_placeholder that provides the placeholder number for the placeholder objects defined by libstdc++.

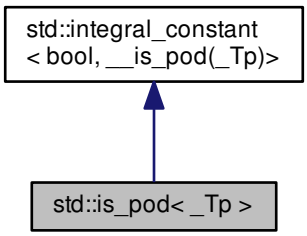
Definition at line 258 of file functional.

The documentation for this struct was generated from the following file:

- functional

4.632 std::is_pod< _Tp > Struct Template Reference

Inheritance diagram for std::is_pod< _Tp >:



Public Types

- typedef integral_constant < bool, __v > **type**
- typedef bool **value_type**

Public Member Functions

- constexpr **operator value_type** () const noexcept
- constexpr value_type **operator()** () const noexcept

Static Public Attributes

- static constexpr bool **value**

4.632.1 Detailed Description

template<typename _Tp>struct std::is_pod< _Tp >

is_pod (deprecated in C++20)

Definition at line 695 of file type_traits.

The documentation for this struct was generated from the following file:

- type_traits

4.633 std::is_pointer< _Tp > Struct Template Reference

Inherits type< __remove_cv_t< _Tp > >.

4.633.1 Detailed Description

template<typename _Tp>struct std::is_pointer< _Tp >

is_pointer

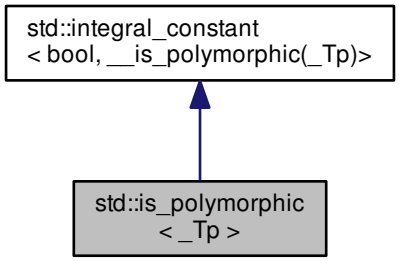
Definition at line 420 of file type_traits.

The documentation for this struct was generated from the following file:

- type_traits

4.634 std::is_polymorphic< _Tp > Struct Template Reference

Inheritance diagram for std::is_polymorphic< _Tp >:



Public Types

- typedef integral_constant < bool, __v > **type**
- typedef bool **value_type**

Public Member Functions

- constexpr **operator value_type** () const noexcept
- constexpr value_type **operator()** () const noexcept

Static Public Attributes

- static constexpr bool **value**

4.634.1 Detailed Description

template<typename _Tp>struct std::is_polymorphic< _Tp >

is_polymorphic

Definition at line 721 of file type_traits.

The documentation for this struct was generated from the following file:

- type_traits

4.635 std::is_reference< typename > Struct Template Reference

Inherits type< is_lvalue_reference< _Tp >, is_rvalue_reference< _Tp > >.

4.635.1 Detailed Description

template<typename>struct std::is_reference< typename >

is_reference

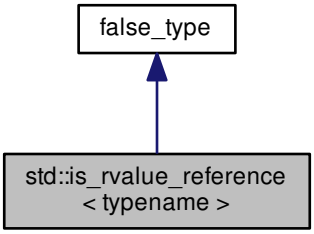
Definition at line 189 of file type_traits.

The documentation for this struct was generated from the following file:

- type_traits

4.636 std::is_rvalue_reference< typename > Struct Template Reference

Inheritance diagram for std::is_rvalue_reference< typename >:



Public Types

- const _Tp * **operator->** () const
- istream_iterator & **operator=** (const istream_iterator &)=default

Friends

- bool operator!= (const istream_iterator &__x, const istream_iterator &__y)
- bool operator== (const istream_iterator &__x, const istream_iterator &__y)

4.654.1 Detailed Description

template<typename _Tp, typename _CharT = char, typename _Traits = char_traits<_CharT>, typename _Dist = ptrdiff_t>class std::istream_iterator< _Tp, _CharT, _Traits, _Dist >

Provides input iterator semantics for streams.

Definition at line 49 of file stream_iterator.h.

4.654.2 Member Typedef Documentation

4.654.2.1 typedef _Dist std::iterator< input_iterator_tag , _Tp, _Dist , const _Tp * , const _Tp & >::difference_type [inherited]

Distance between iterators is represented as this type.

Definition at line 134 of file stl_iterator_base_types.h.

4.654.2.2 typedef input_iterator_tag std::iterator< input_iterator_tag , _Tp, _Dist , const _Tp * , const _Tp & >::iterator_category [inherited]

One of the tag types.

Definition at line 130 of file stl_iterator_base_types.h.

4.654.2.3 typedef const _Tp * std::iterator< input_iterator_tag , _Tp, _Dist , const _Tp * , const _Tp & >::pointer [inherited]

This type represents a pointer-to-value_type.

Definition at line 136 of file stl_iterator_base_types.h.

4.654.2.4 typedef const _Tp & std::iterator< input_iterator_tag , _Tp, _Dist , const _Tp * , const _Tp & >::reference [inherited]

This type represents a reference-to-value_type.

Definition at line 138 of file stl_iterator_base_types.h.

4.654.2.5 typedef _Tp std::iterator< input_iterator_tag , _Tp, _Dist , const _Tp * , const _Tp & >::value_type [inherited]

The type "pointed to" by the iterator.

Definition at line 132 of file stl_iterator_base_types.h.

4.654.3 Constructor & Destructor Documentation

4.654.3.1 template<typename _Tp , typename _CharT = char, typename _Traits = char_traits<_CharT>, typename _Dist = ptrdiff_t> constexpr std::istream_iterator< _Tp, _CharT, _Traits, _Dist >::istream_iterator ( ) [inline]

Construct end of input stream iterator.

Definition at line 67 of file stream_iterator.h.

4.654.3.2 template<typename _Tp , typename _CharT = char, typename _Traits = char_traits<_CharT>, typename _Dist = ptrdiff_t> std::istream_iterator< _Tp, _CharT, _Traits, _Dist >::istream_iterator (istream_type & __s) [inline]

Construct start of input stream iterator.

Definition at line 71 of file stream_iterator.h.

4.654.4 Friends And Related Function Documentation

4.654.4.1 template<typename _Tp , typename _CharT = char, typename _Traits = char_traits<_CharT>, typename _Dist = ptrdiff_t> bool operator!= (const istream_iterator< _Tp, _CharT, _Traits, _Dist > & __x, const istream_iterator< _Tp, _CharT, _Traits, _Dist > & __y) [friend]

Return true if the iterators refer to different streams, or if one is at end-of-stream and the other is not.

Definition at line 153 of file stream_iterator.h.

4.654.4.2 template<typename _Tp , typename _CharT = char, typename _Traits = char_traits<_CharT>, typename _Dist = ptrdiff_t> bool operator== (const istream_iterator< _Tp, _CharT, _Traits, _Dist > & __x, const istream_iterator< _Tp, _CharT, _Traits, _Dist > & __y) [friend]

Return true if the iterators refer to the same stream, or are both at end-of-stream.

Definition at line 147 of file stream_iterator.h.

The documentation for this class was generated from the following file:

- stream_iterator.h

4.655 std::istreambuf_iterator< _CharT, _Traits > Class Template Reference

4.655.1 Detailed Description

template<typename _CharT, typename _Traits = char_traits<_CharT>>class std::istreambuf_iterator< _CharT, _Traits >

Provides input iterator semantics for streambufs.

Definition at line 125 of file iosfwd.

4.655.2 Member Typedef Documentation

4.655.2.1 template<typename _CharT , typename _Traits = char_traits<_CharT>> typedef _CharT std::istreambuf_iterator< _CharT, _Traits >::char_type

Public typedefs.

Definition at line 66 of file streambuf_iterator.h.

4.655.2.2 typedef _Traits::off_type std::iterator< input_iterator_tag , _CharT , _Traits::off_type , _CharT * , _CharT >::difference_type [inherited]

Distance between iterators is represented as this type.

Definition at line 134 of file stl_iterator_base_types.h.

4.655.2.3 template<typename _CharT , typename _Traits = char_traits<_CharT>> typedef _Traits::int_type std::istreambuf_iterator< _CharT, _Traits >::int_type

Public typedefs.

Definition at line 68 of file streambuf_iterator.h.

4.655.2.4 template<typename _CharT , typename _Traits = char_traits<_CharT>> typedef basic_istream<_CharT, _Traits> std::istreambuf_iterator< _CharT, _Traits >::istream_type

Public typedefs.

Definition at line 70 of file streambuf_iterator.h.

4.655.2.5 typedef input_iterator_tag std::iterator< input_iterator_tag , _CharT , _Traits::off_type , _CharT * , _CharT >::iterator_category [inherited]

One of the tag types.

Definition at line 130 of file stl_iterator_base_types.h.

4.655.2.6 typedef _CharT * std::iterator< input_iterator_tag , _CharT , _Traits::off_type , _CharT * , _CharT >::pointer [inherited]

This type represents a pointer-to-value_type.

Definition at line 136 of file stl_iterator_base_types.h.

4.655.2.7 typedef _CharT std::iterator< input_iterator_tag , _CharT , _Traits::off_type , _CharT * , _CharT >::reference [inherited]

This type represents a reference-to-value_type.

Definition at line 138 of file stl_iterator_base_types.h.

4.655.2.8 template<typename _CharT , typename _Traits = char_traits<_CharT>> typedef basic_streambuf<_CharT, _Traits> std::istreambuf_iterator< _CharT, _Traits >::streambuf_type

Public typedefs.

Definition at line 69 of file streambuf_iterator.h.

4.655.2.9 template<typename _CharT , typename _Traits = char_traits<_CharT>> typedef _Traits std::istreambuf_iterator< _CharT, _Traits >::traits_type

Public typedefs.

Definition at line 67 of file streambuf_iterator.h.

4.655.2.10 typedef _CharT std::iterator< input_iterator_tag , _CharT , _Traits::off_type , _CharT * , _CharT >::value_type [inherited]

The type "pointed to" by the iterator.

Definition at line 132 of file stl_iterator_base_types.h.

4.655.3 Constructor & Destructor Documentation

4.655.3.1 template<typename _CharT , typename _Traits = char_traits<_CharT>> constexpr std::istreambuf_iterator< _CharT, _Traits >::istreambuf_iterator ( ) [inline], [noexcept]

Construct end of input stream iterator.

Definition at line 115 of file streambuf_iterator.h.

4.655.3.2 template<typename _CharT , typename _Traits = char_traits<_CharT>> std::istreambuf_iterator< _CharT, _Traits >::istreambuf_iterator (istream_type & __s) [inline], [noexcept]

Construct start of input stream iterator.

Definition at line 130 of file streambuf_iterator.h.

4.655.3.3 template<typename _CharT , typename _Traits = char_traits<_CharT>> std::istreambuf_iterator< _CharT, _Traits >::istreambuf_iterator (streambuf_type * __s) [inline], [noexcept]

Construct start of streambuf iterator.

Definition at line 134 of file streambuf_iterator.h.

4.655.4 Member Function Documentation

4.655.4.1 template<typename _CharT , typename _Traits = char_traits<_CharT>> bool std::istreambuf_iterator< _CharT, _Traits >::equal (const istreambuf_iterator< _CharT, _Traits > & __b) const [inline]

Return true both iterators are end or both are not end.

Definition at line 194 of file streambuf_iterator.h.

4.655.4.2 template<typename _CharT , typename _Traits = char_traits<_CharT>> char_type std::istreambuf_iterator< _CharT, _Traits >::operator* ( ) const [inline]

Return the current character pointed to by iterator. This returns streambuf.sgetc(). It cannot be assigned. NB: The result of operator*() on an end of stream is undefined.

Definition at line 146 of file streambuf_iterator.h.

4.655.4.3 template<typename _CharT , typename _Traits = char_traits<_CharT>> istreambuf_iterator& std::istreambuf_iterator< _CharT, _Traits >::operator++ ( ) [inline]

Advance the iterator. Calls streambuf.sbumpc().

Definition at line 162 of file streambuf_iterator.h.

References std::basic_streambuf< _CharT, _Traits >::sbumpc(), and std::basic_streambuf< _CharT, _Traits >::sgetc().

4.655.4.4 template<typename _CharT , typename _Traits = char_traits<_CharT>> istreambuf_iterator std::istreambuf_iterator< _CharT, _Traits >::operator++ (int) [inline]

Advance the iterator. Calls streambuf.sbumpc().

Definition at line 176 of file streambuf_iterator.h.

References std::basic_streambuf< _CharT, _Traits >::sbumpc(), and std::basic_streambuf< _CharT, _Traits >::sgetc().

The documentation for this class was generated from the following files:

- iosfwd
- streambuf_iterator.h

4.656 std::iterator< _Category, _Tp, _Distance, _Pointer, _Reference > Struct Template Reference

Public Types

- typedef _Distance difference_type

- typedef _Category iterator_category
- typedef _Pointer pointer
- typedef _Reference reference
- typedef _Tp value_type

4.656.1 Detailed Description

template<typename _Category, typename _Tp, typename _Distance = ptrdiff_t, typename _Pointer = _Tp*, typename _Reference = _Tp&>struct std::iterator< _Category, _Tp, _Distance, _Pointer, _Reference >

Common iterator class.

This class does nothing but define nested typedefs. Iterator classes can inherit from this class to save some work. The typedefs are then used in specializations and overloading.

In particular, there are no default implementations of requirements such as `operator++` and the like. (How could there be?)

Definition at line 127 of file stl_iterator_base_types.h.

4.656.2 Member Typedef Documentation

4.656.2.1 template<typename _Category, typename _Tp, typename _Distance = ptrdiff_t, typename _Pointer = _Tp*, typename _Reference = _Tp&> typedef _Distance std::iterator< _Category, _Tp, _Distance, _Pointer, _Reference >::difference_type

Distance between iterators is represented as this type.

Definition at line 134 of file stl_iterator_base_types.h.

4.656.2.2 template<typename _Category, typename _Tp, typename _Distance = ptrdiff_t, typename _Pointer = _Tp*, typename _Reference = _Tp&> typedef _Category std::iterator< _Category, _Tp, _Distance, _Pointer, _Reference >::iterator_category

One of the tag types.

Definition at line 130 of file stl_iterator_base_types.h.

4.656.2.3 template<typename _Category, typename _Tp, typename _Distance = ptrdiff_t, typename _Pointer = _Tp*, typename _Reference = _Tp&> typedef _Pointer std::iterator< _Category, _Tp, _Distance, _Pointer, _Reference >::pointer

This type represents a pointer-to-value_type.

Definition at line 136 of file stl_iterator_base_types.h.

4.656.2.4 template<typename _Category, typename _Tp, typename _Distance = ptrdiff_t, typename _Pointer = _Tp*, typename _Reference = _Tp&> typedef _Reference std::iterator< _Category, _Tp, _Distance, _Pointer, _Reference >::reference

This type represents a reference-to-value_type.

Definition at line 138 of file stl_iterator_base_types.h.

4.656.2.5 template<typename _Category, typename _Tp, typename _Distance = ptrdiff_t, typename _Pointer = _Tp*, typename _Reference = _Tp&> typedef _Tp std::iterator< _Category, _Tp, _Distance, _Pointer, _Reference >::value_type

The type "pointed to" by the iterator.

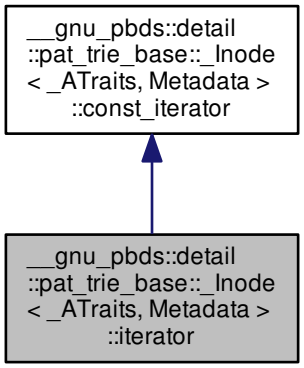
Definition at line 132 of file stl_iterator_base_types.h.

The documentation for this struct was generated from the following file:

- stl_iterator_base_types.h

4.657 __gnu_pbds::detail::pat_trie_base::_Inode< _ATraits, Metadata >::iterator Struct Reference

Inheritance diagram for __gnu_pbds::detail::pat_trie_base::_Inode< _ATraits, Metadata >::iterator:



Public Types

4.657.1 Detailed Description

template<typename _ATraits, typename Metadata>struct __gnu_pbds::detail::pat_trie_base::_Inode< _ATraits, Metadata >::iterator

Child iterator.

Definition at line 320 of file pat_trie_base.hpp.

The documentation for this struct was generated from the following file:

- pat_trie_base.hpp

4.658 std::iterator_traits< typename > Struct Template Reference

Inherits std::__iterator_traits< _Iterator, typename >.

4.658.1 Detailed Description

template<typename>struct std::iterator_traits< typename >

Traits class for iterators.

This class does nothing but define nested typedefs. The general version simply *forwards* the nested typedefs from the Iterator argument. Specialized versions for pointers and pointers-to-const provide tighter, more correct semantics.

Definition at line 423 of file cpp_type_traits.h.

The documentation for this struct was generated from the following file:

- cpp_type_traits.h

4.659 std::iterator_traits< _Tp * > Struct Template Reference

Public Types

- typedef ptrdiff_t **difference_type**
- typedef random_access_iterator_tag **iterator_category**
- typedef _Tp * **pointer**
- typedef _Tp & **reference**
- typedef _Tp **value_type**

4.659.1 Detailed Description

template<typename _Tp>struct std::iterator_traits< _Tp * >

Partial specialization for pointer types.

Definition at line 210 of file stl_iterator_base_types.h.

The documentation for this struct was generated from the following file:

- stl_iterator_base_types.h

4.660 std::iterator_traits< const _Tp * > Struct Template Reference

Public Types

- typedef ptrdiff_t **difference_type**
- typedef random_access_iterator_tag **iterator_category**
- typedef const _Tp * **pointer**
- typedef const _Tp & **reference**
- typedef _Tp **value_type**

4.660.1 Detailed Description

template<typename _Tp>struct std::iterator_traits< const _Tp * >

Partial specialization for const pointer types.

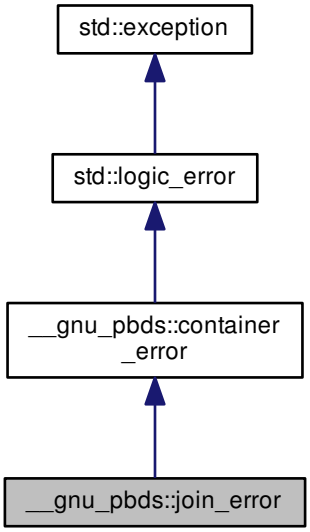
Definition at line 221 of file stl_iterator_base_types.h.

The documentation for this struct was generated from the following file:

- stl_iterator_base_types.h

4.661 __gnu_pbds::join_error Struct Reference

Inheritance diagram for __gnu_pbds::join_error:



Public Member Functions

- virtual const char * what () const noexcept

4.661.1 Detailed Description

A join cannot be performed logical reasons (i.e., the ranges of the two container objects being joined overlaps.

Definition at line 70 of file exception.hpp.

4.661.2 Member Function Documentation

4.661.2.1 virtual const char* std::logic_error::what ( ) const [virtual], [noexcept], [inherited]

Returns a C-style character string describing the general cause of the current error (the same string passed to the ctor).

Reimplemented from std::exception.

Reimplemented in std::future_error.

The documentation for this struct was generated from the following file:

- exception.hpp

4.662 __gnu_pbds::detail::left_child_next_sibling_heap< Value_Type, Cmp_Fn, Node_Metadata, _Alloc > Class Template Reference

Inherits Cmp_Fn.

4.663.1 Detailed Description

template<typename Node, typename _Alloc>class __gnu_pbds::detail::left_child_next_sibling_heap_const_iterator_< Node, _Alloc >

Const point-type iterator.

Definition at line 60 of file left_child_next_sibling_heap_/const_iterator.hpp.

4.663.2 Member Typedef Documentation

4.663.2.1 template<typename Node , typename _Alloc > typedef base_type::const_pointer __gnu_pbds::detail::left_child_next_sibling_heap_const_iterator_< Node, _Alloc >::const_pointer

Iterator's const pointer type.

Definition at line 81 of file left_child_next_sibling_heap_/const_iterator.hpp.

4.663.2.2 template<typename Node , typename _Alloc > typedef base_type::const_reference __gnu_pbds::detail::left_child_next_sibling_heap_const_iterator_< Node, _Alloc >::const_reference

Iterator's const reference type.

Definition at line 87 of file left_child_next_sibling_heap_/const_iterator.hpp.

4.663.2.3 template<typename Node , typename _Alloc > typedef _Alloc::difference_type __gnu_pbds::detail::left_child_next_sibling_heap_const_iterator_< Node, _Alloc >::difference_type

Difference type.

Definition at line 72 of file left_child_next_sibling_heap_/const_iterator.hpp.

4.663.2.4 template<typename Node , typename _Alloc > typedef std::forward_iterator_tag __gnu_pbds::detail::left_child_next_sibling_heap_const_iterator_< Node, _Alloc >::iterator_category

Category.

Definition at line 69 of file left_child_next_sibling_heap_/const_iterator.hpp.

4.663.2.5 template<typename Node , typename _Alloc > typedef base_type::pointer __gnu_pbds::detail::left_child_next_sibling_heap_const_iterator_< Node, _Alloc >::pointer

Iterator's pointer type.

Definition at line 78 of file left_child_next_sibling_heap_/const_iterator.hpp.

4.663.2.6 template<typename Node , typename _Alloc > typedef base_type::reference __gnu_pbds::detail::left_child_next_sibling_heap_const_iterator_< Node, _Alloc >::reference

Iterator's reference type.

Definition at line 84 of file left_child_next_sibling_heap_/const_iterator.hpp.

4.663.2.7 template<typename Node , typename _Alloc > typedef base_type::value_type __gnu_pbds::detail::left_child_next_sibling_heap_const_iterator_< Node, _Alloc >::value_type

Iterator's value type.

Definition at line 75 of file left_child_next_sibling_heap_/const_iterator.hpp.

4.663.3 Constructor & Destructor Documentation

4.663.3.1 template<typename Node , typename _Alloc > __gnu_pbds::detail::left_child_next_sibling_heap_const_iterator_< Node, _Alloc >::left_child_next_sibling_heap_const_iterator_ ( ) [inline]

Default constructor.

Definition at line 96 of file left_child_next_sibling_heap_/const_iterator.hpp.

4.663.3.2 template<typename Node , typename _Alloc > __gnu_pbds::detail::left_child_next_sibling_heap_const_iterator_< Node, _Alloc >::left_child_next_sibling_heap_const_iterator_ (const left_child_next_sibling_heap_const_iterator_< Node, _Alloc > & *other*) [inline]

Copy constructor.

Definition at line 101 of file left_child_next_sibling_heap_/const_iterator.hpp.

4.663.4 Member Function Documentation

4.663.4.1 template<typename Node , typename _Alloc > bool __gnu_pbds::detail::left_child_next_sibling_heap_const_iterator_< Node, _Alloc >::operator!= (const left_child_next_sibling_heap_const_iterator_< Node, _Alloc > & *other*) const [inline]

Compares content (negatively) to a different iterator object.

Definition at line 111 of file left_child_next_sibling_heap_/const_iterator.hpp.

4.663.4.2 template<typename Node , typename _Alloc > bool __gnu_pbds::detail::left_child_next_sibling_heap_node_point_const_iterator_< Node, _Alloc >::operator!= (const left_child_next_sibling_heap_node_point_const_iterator_< Node, _Alloc > & *other*) const [inline], [inherited]

Compares content (negatively) to a different iterator object.

Definition at line 127 of file left_child_next_sibling_heap_/point_const_iterator.hpp.

4.663.4.3 template<typename Node , typename _Alloc > const_reference __gnu_pbds::detail::left_child_next_sibling_heap_node_point_const_iterator_< Node, _Alloc >::operator* ( ) const [inline], [inherited]

Access.

Definition at line 114 of file left_child_next_sibling_heap_/point_const_iterator.hpp.

4.663.4.4 template<typename Node , typename _Alloc > const_pointer __gnu_pbds::detail::left_child_next_sibling_heap_node_point_const_iterator_< Node, _Alloc >::operator-> ( ) const [inline], [inherited]

Access.

Definition at line 106 of file left_child_next_sibling_heap_/point_const_iterator.hpp.

4.663.4.5 template<typename Node , typename _Alloc > bool __gnu_pbds::detail::left_child_next_sibling_heap_const_iterator_< Node, _Alloc >::operator== (const left_child_next_sibling_heap_const_iterator_< Node, _Alloc > & *other*) const [inline]

Compares content to a different iterator object.

Definition at line 106 of file left_child_next_sibling_heap_/const_iterator.hpp.

4.663.4.6 template<typename Node , typename _Alloc > bool __gnu_pbds::detail::left_child_next_sibling_heap_node_point_const_iterator_< Node, _Alloc >::operator== (const left_child_next_sibling_heap_node_point_const_iterator_< Node, _Alloc > & *other*) const [inline], [inherited]

Compares content to a different iterator object.

Definition at line 122 of file left_child_next_sibling_heap_/point_const_iterator.hpp.

The documentation for this class was generated from the following file:

- left_child_next_sibling_heap_/const_iterator.hpp

Category.

Definition at line 68 of file left_child_next_sibling_heap_/point_const_iterator.hpp.

4.665.2.5 template<typename Node , typename _Alloc > typedef rebind_traits<_Alloc, value_type>::pointer __gnu_pbds::detail::left_child_next_sibling_heap_node_point_const_iterator_< Node, _Alloc >::pointer

Iterator's pointer type.

Definition at line 77 of file left_child_next_sibling_heap_/point_const_iterator.hpp.

4.665.2.6 template<typename Node , typename _Alloc > typedef rebind_traits<_Alloc, value_type>::reference __gnu_pbds::detail::left_child_next_sibling_heap_node_point_const_iterator_< Node, _Alloc >::reference

Iterator's reference type.

Definition at line 84 of file left_child_next_sibling_heap_/point_const_iterator.hpp.

4.665.2.7 template<typename Node , typename _Alloc > typedef Node::value_type __gnu_pbds::detail::left_child_next_sibling_heap_node_point_const_iterator_< Node, _Alloc >::value_type

Iterator's value type.

Definition at line 74 of file left_child_next_sibling_heap_/point_const_iterator.hpp.

4.665.3 Constructor & Destructor Documentation

4.665.3.1 template<typename Node , typename _Alloc > __gnu_pbds::detail::left_child_next_sibling_heap_node_point_const_iterator_< Node, _Alloc >::left_child_next_sibling_heap_node_point_const_iterator_ ( ) [inline]

Default constructor.

Definition at line 96 of file left_child_next_sibling_heap_/point_const_iterator.hpp.

4.665.3.2 template<typename Node , typename _Alloc > __gnu_pbds::detail::left_child_next_sibling_heap_node_point_const_iterator_< Node, _Alloc >::left_child_next_sibling_heap_node_point_const_iterator_ (const left_child_next_sibling_heap_node_point_const_iterator_< Node, _Alloc > & *other*) [inline]

Copy constructor.

Definition at line 101 of file left_child_next_sibling_heap_/point_const_iterator.hpp.

4.665.4 Member Function Documentation

4.665.4.1 template<typename Node , typename _Alloc > bool __gnu_pbds::detail::left_child_next_sibling_heap_node_point_const_iterator_< Node, _Alloc >::operator!= (const left_child_next_sibling_heap_node_point_const_iterator_< Node, _Alloc > & *other*) const [inline]

Compares content (negatively) to a different iterator object.

Definition at line 127 of file left_child_next_sibling_heap_/point_const_iterator.hpp.

4.665.4.2 template<typename Node , typename _Alloc > const_reference __gnu_pbds::detail::left_child_next_sibling_heap_node_point_const_iterator_< Node, _Alloc >::operator* ( ) const [inline]

Access.

Definition at line 114 of file left_child_next_sibling_heap_/point_const_iterator.hpp.

4.665.4.3 template<typename Node , typename _Alloc > const_pointer __gnu_pbds::detail::left_child_next_sibling_heap_node_point_const_iterator_< Node, _Alloc >::operator-> ( ) const [inline]

Access.

Definition at line 106 of file left_child_next_sibling_heap_/point_const_iterator.hpp.

4.665.4.4 template<typename Node , typename _Alloc > bool __gnu_pbds::detail::left_child_next_sibling_heap_node_point_const_iterator_< Node, _Alloc >::operator== (const left_child_next_sibling_heap_node_point_const_iterator_< Node, _Alloc > & *other*) const [inline]

Compares content to a different iterator object.

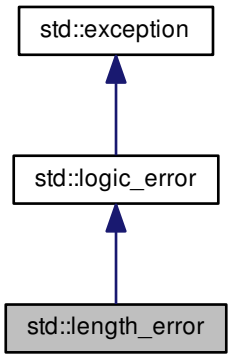
Definition at line 122 of file left_child_next_sibling_heap_/point_const_iterator.hpp.

The documentation for this class was generated from the following file:

- left_child_next_sibling_heap_/point_const_iterator.hpp

4.666 std::length_error Class Reference

Inheritance diagram for std::length_error:



Public Member Functions

- **length_error** (const string &__arg) _GLIBCXX_TXN_SAFE
- **length_error** (const char *) _GLIBCXX_TXN_SAFE
- **length_error** (const length_error &)=default
- **length_error** (length_error &&)=default
- length_error & **operator=** (const length_error &)=default
- length_error & **operator=** (length_error &&)=default
- virtual const char * what () const noexcept

4.666.1 Detailed Description

Thrown when an object is constructed that would exceed its maximum permitted size (e.g., a basic_string instance).

Definition at line 184 of file stdexcept.

4.666.2 Member Function Documentation

4.666.2.1 virtual const char* std::logic_error::what ( ) const [virtual], [noexcept], [inherited]

Returns a C-style character string describing the general cause of the current error (the same string passed to the ctor).

Reimplemented from std::exception.

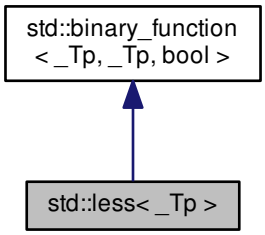
Reimplemented in std::future_error.

The documentation for this class was generated from the following file:

- stdexcept

4.667 std::less< _Tp > Struct Template Reference

Inheritance diagram for std::less< _Tp >:



Public Types

- typedef _Tp first_argument_type
- typedef bool result_type
- typedef _Tp second_argument_type

Public Member Functions

- constexpr bool **operator()** (const _Tp &__x, const _Tp &__y) const

4.667.1 Detailed Description

template<typename _Tp = void>struct std::less< _Tp >

One of the comparison functors.

Definition at line 340 of file stl_function.h.

4.667.2 Member Typedef Documentation

4.667.2.1 typedef _Tp std::binary_function< _Tp , _Tp , bool >::first_argument_type [inherited]

`first_argument_type` is the type of the first argument

Definition at line 121 of file stl_function.h.

4.667.2.2 typedef bool std::binary_function< _Tp , _Tp , bool >::result_type [inherited]

`result_type` is the return type

Definition at line 127 of file stl_function.h.

4.667.2.3 typedef _Tp std::binary_function< _Tp , _Tp , bool >::second_argument_type [inherited]

`second_argument_type` is the type of the second argument

Definition at line 124 of file stl_function.h.

The documentation for this struct was generated from the following file:

- stl_function.h

  _Traits > & operator>> (std::basic_istream< _CharT, _Traits > &__is, std::linear_congruential_engine< _UIntType1, __a1, __c1, __m1 > &__lcr)

4.673.1 Detailed Description

template<typename _UIntType, _UIntType __a, _UIntType __c, _UIntType __m>class std::linear_congruential_engine< _UIntType, __a, __c, __m >

A model of a linear congruential random number generator.

A random number generator that produces pseudorandom numbers via linear function:

$$x_{i+1} \leftarrow (ax_i + c) \bmod m$$

The template parameter `_UIntType` must be an unsigned integral type large enough to store values up to (__m-1). If the template parameter `__m` is 0, the modulus `__m` used is std::numeric_limits<_UIntType>::max() plus 1. Otherwise, the template parameters `__a` and `__c` must be less than `__m`.

The size of the state is 1.

Definition at line 246 of file random.h.

4.673.2 Member Typedef Documentation

4.673.2.1 template<typename _UIntType, _UIntType __a, _UIntType __c, _UIntType __m> typedef _UIntType std::linear_congruential_engine< _UIntType, __a, __c, __m >::result_type

The type of the generated random value.

Definition at line 259 of file random.h.

4.673.3 Constructor & Destructor Documentation

4.673.3.1 template<typename _UIntType, _UIntType __a, _UIntType __c, _UIntType __m> std::linear_congruential_engine< _UIntType, __a, __c, __m >::linear_congruential_engine ( ) [inline]

Constructs a linear_congruential_engine random number generator engine with seed 1.

Definition at line 273 of file random.h.

4.673.3.2 template<typename _UIntType, _UIntType __a, _UIntType __c, _UIntType __m> std::linear_congruential_engine< _UIntType, __a, __c, __m >::linear_congruential_engine (result_type __s) [inline], [explicit]

Constructs a linear_congruential_engine random number generator engine with seed __s. The default seed value is 1.

Parameters

__s	The initial seed value.

Definition at line 284 of file random.h.

References std::linear_congruential_engine< _UIntType, __a, __c, __m >::seed().

4.673.3.3 template<typename _UIntType, _UIntType __a, _UIntType __c, _UIntType __m> template<typename _Sseq , typename = _If_seed_seq<_Sseq>> std::linear_congruential_engine< _UIntType, __a, __c, __m >::linear_congruential_engine (_Sseq & *__q*) [inline], [explicit]

Constructs a linear_congruential_engine random number generator engine seeded from the seed sequence __q.

Parameters

__q	the seed sequence.

Definition at line 295 of file random.h.

References std::linear_congruential_engine< _UIntType, __a, __c, __m >::seed().

4.673.4 Member Function Documentation

4.673.4.1 template<typename _UIntType, _UIntType __a, _UIntType __c, _UIntType __m> void std::linear_congruential_engine< _UIntType, __a, __c, __m >::discard (unsigned long long *__z*) [inline]

Discard a sequence of random numbers.

Definition at line 339 of file random.h.

4.673.4.2 template<typename _UIntType, _UIntType __a, _UIntType __c, _UIntType __m> static constexpr result_type std::linear_congruential_engine< _UIntType, __a, __c, __m >::max ( ) [inline], [static]

Gets the largest possible value in the output range.

Definition at line 332 of file random.h.

4.673.4.3 template<typename _UIntType, _UIntType __a, _UIntType __c, _UIntType __m> static constexpr result_type std::linear_congruential_engine< _UIntType, __a, __c, __m >::min ( ) [inline], [static]

Gets the smallest possible value in the output range.

The minimum depends on the __c parameter: if it is zero, the minimum generated must be > 0, otherwise 0 is allowed.

Definition at line 325 of file random.h.

4.673.4.4 template<typename _UIntType, _UIntType __a, _UIntType __c, _UIntType __m> result_type std::linear_congruential_engine< _UIntType, __a, __c, __m >::operator() ( ) [inline]

Gets the next random number in the sequence.

Definition at line 349 of file random.h.

4.673.4.5 template<typename _UIntType, _UIntType __a, _UIntType __c, _UIntType __m> template<typename _Sseq > auto std::linear_congruential_engine< _UIntType, __a, __c, __m >::seed (_Sseq & __q) -> _If_seed_seq<_Sseq>

Seeds the LCR engine with a value generated by __q.

Definition at line 133 of file bits/random.tcc.

References std::__lg().

4.673.4.6 template<typename _UIntType , _UIntType __a, _UIntType __c, _UIntType __m> void std::linear_congruential_engine< _UIntType, __a, __c, __m >::seed (result_type __s = default_seed)

Reseeds the linear_congruential_engine random number generator engine sequence to the seed __s.

Parameters

__s	The new seed.

Seeds the LCR with integral value __s, adjusted so that the ring identity is never a member of the convergence set.

Definition at line 117 of file bits/random.tcc.

Referenced by std::linear_congruential_engine< _UIntType, __a, __c, __m >::linear_congruential_engine().

4.673.4.7 template<typename _UIntType, _UIntType __a, _UIntType __c, _UIntType __m> template<typename _Sseq > _If_seed_seq<_Sseq> std::linear_congruential_engine< _UIntType, __a, __c, __m >::seed (_Sseq & __q)

Reseeds the linear_congruential_engine random number generator engine sequence using values from the seed sequence __q.

Parameters

__q	the seed sequence.

4.673.5 Friends And Related Function Documentation

4.673.5.1 template<typename _UIntType, _UIntType __a, _UIntType __c, _UIntType __m> template<typename _UIntType1 , _UIntType1 __a1, _UIntType1 __c1, _UIntType1 __m1, typename _CharT , typename _Traits > std::basic_ostream<_CharT, _Traits>& operator<< (std::basic_ostream< _CharT, _Traits > & __os, const std::linear_congruential_engine< _UIntType1, __a1, __c1, __m1 > & __lcr) [friend]

Writes the textual representation of the state x(i) of x to __os.

Parameters

__os	The output stream.
__lcr	A % linear_congruential_engine random number generator.

Returns

__os.

4.673.5.2 template<typename _UIntType, _UIntType __a, _UIntType __c, _UIntType __m> bool operator== (const linear_congruential_engine< _UIntType, __a, __c, __m > & *__lhs,* const linear_congruential_engine< _UIntType, __a, __c, __m > & *__rhs*) [friend]

Compares two linear congruential random number generator objects of the same type for equality.

Parameters

__lhs	A linear congruential random number generator object.
__rhs	Another linear congruential random number generator object.

Returns

true if the infinite sequences of generated values would be equal, false otherwise.

Definition at line 367 of file random.h.

4.673.5.3 template<typename _UIntType, _UIntType __a, _UIntType __c, _UIntType __m> template<typename _UIntType1 , _UIntType1 __a1, _UIntType1 __c1, _UIntType1 __m1, typename _CharT , typename _Traits > std::basic_istream<_CharT, _Traits>& operator>> (std::basic_istream< _CharT, _Traits > & *__is,* std::linear_congruential_engine< _UIntType1, __a1, __c1, __m1 > & *__lcr*) [friend]

Sets the state of the engine by reading its textual representation from __is.

The textual representation must have been previously written using an output stream whose imbued locale and whose type's template specialization arguments _CharT and _Traits were the same as those of __is.

Parameters

__is	The input stream.
__lcr	A % linear_congruential_engine random number generator.

Returns

__is.

4.673.6 Member Data Documentation

4.673.6.1 template<typename _UIntType, _UIntType __a, _UIntType __c, _UIntType __m> constexpr _UIntType std::linear_congruential_engine< _UIntType, __a, __c, __m >::increment [static]

An increment.

Definition at line 264 of file random.h.

4.673.6.2 template<typename _UIntType, _UIntType __a, _UIntType __c, _UIntType __m> constexpr _UIntType std::linear_congruential_engine< _UIntType, __a, __c, __m >::modulus [static]

The modulus.

Definition at line 266 of file random.h.

4.673.6.3 template<typename _UIntType, _UIntType __a, _UIntType __c, _UIntType __m> constexpr _UIntType std::linear_congruential_engine< _UIntType, __a, __c, __m >::multiplier [static]

The multiplier.

Definition at line 262 of file random.h.

4.675.1 Detailed Description

template<typename _Tp, typename _Allocator>class std::__debug::list< _Tp, _Allocator >

Class std::list with safety/checking/debug instrumentation.

Definition at line 36 of file debug/list.

4.675.2 Member Function Documentation

4.675.2.1 void __gnu_debug::_Safe_sequence_base::_M_detach_all ( ) [protected], [inherited]

Detach all iterators, leaving them singular.

Referenced by __gnu_debug::_Safe_sequence_base::~_Safe_sequence_base().

4.675.2.2 void __gnu_debug::_Safe_sequence_base::_M_detach_singular ( ) [protected], [inherited]

Detach all singular iterators.

Postcondition

for all iterators i attached to this sequence, i->_M_version == _M_version.

4.675.2.3 __gnu_cxx::__mutex& __gnu_debug::_Safe_sequence_base::_M_get_mutex ( ) throw) [protected], [inherited]

For use in _Safe_sequence.

Referenced by __gnu_debug::_Safe_sequence< _Sequence >::_M_transfer_from_if().

4.675.2.4 void __gnu_debug::_Safe_sequence_base::_M_invalidate_all ( ) const [inline], [protected], [inherited]

Invalidates all iterators.

Definition at line 256 of file safe_base.h.

References __gnu_debug::_Safe_sequence_base::_M_version.

4.675.2.5 void __gnu_debug::_Safe_sequence< list< _Tp, _Allocator > >::_M_invalidate_if (_Predicate __pred) [inherited]

Invalidates all iterators `x` that reference this sequence, are not singular, and for which `__pred(x)` returns `true`. `__pred` will be invoked with the normal iterators nested in the safe ones.

4.675.2.6 void __gnu_debug::_Safe_sequence_base::_M_revalidate_singular ( ) [protected], [inherited]

Revalidates all attached singular iterators. This method may be used to validate iterators that were invalidated before (but for some reason, such as an exception, need to become valid again).

4.675.2.7 void __gnu_debug::_Safe_sequence_base::_M_swap (_Safe_sequence_base & __x) [protected], [noexcept], [inherited]

Swap this sequence with the given sequence. This operation also swaps ownership of the iterators, so that when the operation is complete all iterators that originally referenced one container now reference the other container.

4.675.2.8 void __gnu_debug::_Safe_sequence< list< _Tp, _Allocator > >::_M_transfer_from_if (_Safe_sequence< list< _Tp, _Allocator > > & __from, _Predicate __pred) [inherited]

Transfers all iterators `x` that reference `from` sequence, are not singular, and for which `__pred(x)` returns `true`. `__pred` will be invoked with the normal iterators nested in the safe ones.

4.675.3 Member Data Documentation

4.675.3.1 _Safe_iterator_base* __gnu_debug::_Safe_sequence_base::_M_const_iterators [inherited]

The list of constant iterators that reference this container.

Definition at line 197 of file safe_base.h.

Referenced by __gnu_debug::_Safe_sequence< _Sequence >::_M_transfer_from_if().

4.675.3.2 _Safe_iterator_base* __gnu_debug::_Safe_sequence_base::_M_iterators [inherited]

The list of mutable iterators that reference this container.

Definition at line 194 of file safe_base.h.

Referenced by __gnu_debug::_Safe_sequence< _Sequence >::_M_transfer_from_if().

4.675.3.3 unsigned int __gnu_debug::_Safe_sequence_base::_M_version [mutable], [inherited]

The container version number. This number may never be 0.

Definition at line 200 of file safe_base.h.

Referenced by __gnu_debug::_Safe_sequence_base::_M_invalidate_all().

4.676.1 Detailed Description

template<typename _Tp, typename _Alloc = std::allocator<_Tp>>class std::list< _Tp, _Alloc >

A standard container with linear time access to elements, and fixed time insertion/deletion at any point in the sequence.

Template Parameters

_Tp	Type of element.
_Alloc	Allocator type, defaults to allocator<_Tp>.

Meets the requirements of a `container`, a `reversible container`, and a `sequence`, including the `optional sequence requirements` with the exception of `at` and `operator[]`.

This is a *doubly linked* list. Traversal up and down the list requires linear time, but adding and removing elements (or *nodes*) is done in constant time, regardless of where the change takes place. Unlike std::vector and std::deque, random-access iterators are not provided, so subscripting ([]) access is not allowed. For algorithms which only need sequential access, this lack makes no difference.

Also unlike the other standard containers, std::list provides specialized algorithms unique to linked lists, such as splicing, sorting, and in-place reversal.

A couple points on memory allocation for list<Tp>:

First, we never actually allocate a Tp, we allocate List_node<Tp>'s and trust [20.1.5]/4 to DTRT. This is to ensure that after elements from list<X,Alloc1> are spliced into list<X,Alloc2>, destroying the memory of the second list is a valid operation, i.e., Alloc1 giveth and Alloc2 taketh away.

Second, a list conceptually represented as

```
A <---> B <---> C <---> D
```

is actually circular; a link exists between A and D. The list class holds (as its only data member) a private list::iterator pointing to *D*, not to *A!* To get to the head of the list, we start at the tail and move forward by one. When this member iterator's next/previous pointers refer to itself, the list is empty.

Definition at line 556 of file stl_list.h.

4.676.2 Constructor & Destructor Documentation

4.676.2.1 template<typename _Tp, typename _Alloc = std::allocator<_Tp>> std::list< _Tp, _Alloc >::list ( ) [default]

Creates a list with no elements.

4.676.2.2 template<typename _Tp, typename _Alloc = std::allocator<_Tp>> std::list< _Tp, _Alloc >::list (const allocator_type & *__a*) [inline], [explicit], [noexcept]

Creates a list with no elements.

Parameters

__a	An allocator object.

Definition at line 683 of file stl_list.h.

4.676.2.3 template<typename _Tp, typename _Alloc = std::allocator<_Tp>> std::list< _Tp, _Alloc >::list (size_type *__n*, const allocator_type & *__a* = allocator_type()) [inline], [explicit]

Creates a list with default constructed elements.

Parameters

__n	The number of elements to initially create.
__a	An allocator object.

This constructor fills the list with *__n* default constructed elements.

Definition at line 696 of file stl_list.h.

4.676.2.4 template<typename _Tp, typename _Alloc = std::allocator<_Tp>> std::list< _Tp, _Alloc >::list (size_type *__n*, const value_type & *__value*, const allocator_type & *__a* = allocator_type()) [inline]

Creates a list with copies of an exemplar element.

Parameters

__n	The number of elements to initially create.
__value	An element to copy.
__a	An allocator object.

This constructor fills the list with *__n* copies of *__value*.

Definition at line 708 of file stl_list.h.

4.676.2.5 template<typename _Tp, typename _Alloc = std::allocator<_Tp>> std::list< _Tp, _Alloc >::list (const list< _Tp, _Alloc > & *__x*) [inline]

List copy constructor.

Parameters

__x	A list of identical element and allocator types.

The newly-created list uses a copy of the allocation object used by *__x* (unless the allocator traits dictate a different object).

Definition at line 735 of file stl_list.h.

4.676.2.6 template<typename _Tp, typename _Alloc = std::allocator<_Tp>> std::list< _Tp, _Alloc >::list (list< _Tp, _Alloc > &&) [default]

List move constructor.

The newly-created list contains the exact contents of the moved instance. The contents of the moved instance are a valid, but unspecified list.

4.676.2.7 template<typename _Tp, typename _Alloc = std::allocator<_Tp>> std::list< _Tp, _Alloc >::list (initializer_list< value_type > *__l*, const allocator_type & *__a* = allocator_type()) [inline]

Builds a list from an initializer_list.

Parameters

__l	An initializer_list of value_type.
__a	An allocator object.

Create a list consisting of copies of the elements in the initializer_list *__l*. This is linear in __l.size().

Definition at line 758 of file stl_list.h.

4.676.2.8 template<typename _Tp, typename _Alloc = std::allocator<_Tp>> template<typename _InputIterator , typename = std::_RequireInputIter<_InputIterator>> std::list< _Tp, _Alloc >::list (_InputIterator *__first,* _InputIterator *__last,* const allocator_type & *__a* = allocator_type()) [inline]

Builds a list from a range.

Parameters

__first	An input iterator.
__last	An input iterator.
__a	An allocator object.

Create a list consisting of copies of the elements from [*__first*,*__last*). This is linear in N (where N is distance(*__first*,*__last*)).

Definition at line 803 of file stl_list.h.

4.676.2.9 template<typename _Tp, typename _Alloc = std::allocator<_Tp>> std::list< _Tp, _Alloc >::~list ( ) [default]

No explicit dtor needed as the _Base dtor takes care of things. The _Base dtor only erases the elements, and note that if the elements themselves are pointers, the pointed-to memory is not touched in any way. Managing the pointer is the user's responsibility.

4.676.3 Member Function Documentation

4.676.3.1 template<typename _Tp, typename _Alloc = std::allocator<_Tp>> template<typename... _Args> _Node* std::list< _Tp, _Alloc >::_M_create_node (_Args &&... *__args*) [inline], [protected]

Parameters

__args	An instance of user data.

Allocates space for a new node and constructs a copy of *__args* in it.

Definition at line 632 of file stl_list.h.

4.676.3.2 template<typename _Tp, typename _Alloc = std::allocator<_Tp>> void std::list< _Tp, _Alloc >::assign (size_type *__n,* const value_type & *__val*) [inline]

Assigns a given value to a list.

Parameters

__n	Number of elements to be assigned.
__val	Value to be assigned.

This function fills a list with *__n* copies of the given value. Note that the assignment completely changes the list and that the resulting list's size is the same as the number of elements assigned.

Definition at line 889 of file stl_list.h.

Referenced by std::list< __inp, __rebind_inp >::operator=().

4.676.3.3 template<typename _Tp, typename _Alloc = std::allocator<_Tp>> template<typename _InputIterator , typename = std::_RequireInputIter<_InputIterator>> void std::list< _Tp, _Alloc >::assign (_InputIterator *__first,* _InputIterator *__last*) [inline]

Assigns a range to a list.

Parameters

__first	An input iterator.

__last	An input iterator.

This function fills a list with copies of the elements in the range [*__first*,*__last*).

Note that the assignment completely changes the list and that the resulting list's size is the same as the number of elements assigned.

Definition at line 908 of file stl_list.h.

4.676.3.4 template<typename _Tp, typename _Alloc = std::allocator<_Tp>> void std::list< _Tp, _Alloc >::assign (initializer_list< value_type > __l) [inline]

Assigns an initializer_list to a list.

Parameters

__l	An initializer_list of value_type.

Replace the contents of the list with copies of the elements in the initializer_list *__l*. This is linear in __l.size().

Definition at line 930 of file stl_list.h.

4.676.3.5 template<typename _Tp, typename _Alloc = std::allocator<_Tp>> reference std::list< _Tp, _Alloc >::back ( ) [inline], [noexcept]

Returns a read/write reference to the data at the last element of the list.

Definition at line 1130 of file stl_list.h.

4.676.3.6 template<typename _Tp, typename _Alloc = std::allocator<_Tp>> const_reference std::list< _Tp, _Alloc >::back ( ) const [inline], [noexcept]

Returns a read-only (constant) reference to the data at the last element of the list.

Definition at line 1142 of file stl_list.h.

4.676.3.7 template<typename _Tp, typename _Alloc = std::allocator<_Tp>> iterator std::list< _Tp, _Alloc >::begin ( ) [inline], [noexcept]

Returns a read/write iterator that points to the first element in the list. Iteration is done in ordinary element order.

Definition at line 945 of file stl_list.h.

Referenced by std::list< __inp, __rebind_inp >::crend(), std::list< __inp, __rebind_inp >::front(), std::list< _Tp, _Alloc >::insert(), std::list< __inp, __rebind_inp >::list(), std::list< _Tp, _Alloc >::merge(), std::list< _Tp, _Alloc >::operator=(), std::operator==(), std::list< __inp, __rebind_inp >::pop_front(), std::list< __inp, __rebind_inp >::push_front(), std::list< __inp, __rebind_inp >::rend(), std::list< _Tp, _Alloc >::sort(), and std::list< __inp, __rebind_inp >::splice().

4.676.3.8 template<typename _Tp, typename _Alloc = std::allocator<_Tp>> const_iterator std::list< _Tp, _Alloc >::begin ( ) const [inline], [noexcept]

Returns a read-only (constant) iterator that points to the first element in the list. Iteration is done in ordinary element order.

Definition at line 954 of file stl_list.h.

4.676.3.9 template<typename _Tp, typename _Alloc = std::allocator<_Tp>> const_iterator std::list< _Tp, _Alloc >::cbegin ( ) const [inline], [noexcept]

Returns a read-only (constant) iterator that points to the first element in the list. Iteration is done in ordinary element order.

Definition at line 1018 of file stl_list.h.

4.676.3.10 template<typename _Tp, typename _Alloc = std::allocator<_Tp>> const_iterator std::list< _Tp, _Alloc >::cend ( ) const [inline], [noexcept]

Returns a read-only (constant) iterator that points one past the last element in the list. Iteration is done in ordinary element order.

Definition at line 1027 of file stl_list.h.

4.676.3.11 template<typename _Tp, typename _Alloc = std::allocator<_Tp>> void std::list< _Tp, _Alloc >::clear ( ) [inline], [noexcept]

Erases all the elements. Note that this function only erases the elements, and that if the elements themselves are pointers, the pointed-to memory is not touched in any way. Managing the pointer is the user's responsibility.

Definition at line 1498 of file stl_list.h.

4.676.3.12 template<typename _Tp, typename _Alloc = std::allocator<_Tp>> const_reverse_iterator std::list< _Tp, _Alloc >::crbegin ( ) const [inline], [noexcept]

Returns a read-only (constant) reverse iterator that points to the last element in the list. Iteration is done in reverse element order.

Definition at line 1036 of file stl_list.h.

4.676.3.13 template<typename _Tp, typename _Alloc = std::allocator<_Tp>> const_reverse_iterator std::list< _Tp, _Alloc >::crend ( ) const [inline], [noexcept]

Returns a read-only (constant) reverse iterator that points to one before the first element in the list. Iteration is done in reverse element order.

Definition at line 1045 of file stl_list.h.

4.676.3.14 template<typename _Tp, typename _Alloc = std::allocator<_Tp>> template<typename... _Args> iterator std::list< _Tp, _Alloc >::emplace (const_iterator *__position*, _Args &&... *__args*)

Constructs object in list before specified iterator.

Parameters

__position	A const_iterator into the list.
__args	Arguments.

Returns

An iterator that points to the inserted data.

This function will insert an object of type T constructed with T(std::forward<Args>(args)...) before the specified location. Due to the nature of a list this operation can be done in constant time, and does not invalidate iterators and references.

Referenced by std::list< __inp, __rebind_inp >::insert().

4.676.3.15 template<typename _Tp, typename _Alloc = std::allocator<_Tp>> bool std::list< _Tp, _Alloc >::empty ( ) const [inline], [noexcept]

Returns true if the list is empty. (Thus begin() would equal end().)

Definition at line 1055 of file stl_list.h.

Referenced by std::list< _Tp, _Alloc >::sort(), and std::list< __inp, __rebind_inp >::splice().

4.676.3.16 template<typename _Tp, typename _Alloc = std::allocator<_Tp>> iterator std::list< _Tp, _Alloc >::end ( ) [inline], [noexcept]

Returns a read/write iterator that points one past the last element in the list. Iteration is done in ordinary element order.

Definition at line 963 of file stl_list.h.

Referenced by std::list< __inp, __rebind_inp >::back(), std::list< __inp, __rebind_inp >::crbegin(), std::list< __inp, __rebind_inp >::list(), std::list< _Tp, _Alloc >::merge(), std::list< _Tp, _Alloc >::operator=(), std::operator==(), std::list< __inp, __rebind_inp >::push_back(), std::list< __inp, __rebind_inp >::rbegin(), and std::list< __inp, __rebind_inp >::splice().

4.676.3.17 template<typename _Tp, typename _Alloc = std::allocator<_Tp>> const_iterator std::list< _Tp, _Alloc >::end ( ) const [inline], [noexcept]

Returns a read-only (constant) iterator that points one past the last element in the list. Iteration is done in ordinary element order.

Definition at line 972 of file stl_list.h.

4.676.3.18 template<typename _Tp , typename _Alloc > list< _Tp, _Alloc >::iterator list::erase (const_iterator *__position*) [noexcept]

Remove element at given position.

Parameters

__position	Iterator pointing to element to be erased.

Returns

An iterator pointing to the next element (or end()).

This function will erase the element at the given position and thus shorten the list by one.

Due to the nature of a list this operation can be done in constant time, and only invalidates iterators/references to the element being removed. The user is also cautioned that this function only erases the element, and that if the element is itself a pointer, the pointed-to memory is not touched in any way. Managing the pointer is the user's responsibility.

Definition at line 152 of file list.tcc.

Referenced by std::list< __inp, __rebind_inp >::erase().

4.676.3.19 template<typename _Tp, typename _Alloc = std::allocator<_Tp>> iterator std::list< _Tp, _Alloc >::erase (const_iterator *__first,* const_iterator *__last*) [inline], [noexcept]

Remove a range of elements.

Parameters

__first	Iterator pointing to the first element to be erased.
__last	Iterator pointing to one past the last element to be erased.

Returns

An iterator pointing to the element pointed to by *last* prior to erasing (or end()).

This function will erase the elements in the range [first,last) and shorten the list accordingly.

This operation is linear time in the size of the range and only invalidates iterators/references to the element being removed. The user is also cautioned that this function only erases the elements, and that if the elements themselves

are pointers, the pointed-to memory is not touched in any way. Managing the pointer is the user's responsibility.

Definition at line 1456 of file stl_list.h.

4.676.3.20 template<typename _Tp, typename _Alloc = std::allocator<_Tp>> reference std::list< _Tp, _Alloc >::front ( ) [inline], [noexcept]

Returns a read/write reference to the data at the first element of the list.

Definition at line 1114 of file stl_list.h.

4.676.3.21 template<typename _Tp, typename _Alloc = std::allocator<_Tp>> const_reference std::list< _Tp, _Alloc >::front ( ) const [inline], [noexcept]

Returns a read-only (constant) reference to the data at the first element of the list.

Definition at line 1122 of file stl_list.h.

4.676.3.22 template<typename _Tp, typename _Alloc = std::allocator<_Tp>> allocator_type std::list< _Tp, _Alloc >::get_allocator ( ) const [inline], [noexcept]

Get a copy of the memory allocation object.

Definition at line 936 of file stl_list.h.

4.676.3.23 template<typename _Tp , typename _Alloc > list< _Tp, _Alloc >::iterator list::insert (const_iterator *__position,* const value_type & *__x*)

Inserts given value into list before specified iterator.

Parameters

__position	A const_iterator into the list.
__x	Data to be inserted.

Returns

An iterator that points to the inserted data.

This function will insert a copy of the given value before the specified location. Due to the nature of a list this operation can be done in constant time, and does not invalidate iterators and references.

Definition at line 103 of file list.tcc.

Referenced by std::list< __inp, __rebind_inp >::insert().

4.676.3.24 template<typename _Tp, typename _Alloc = std::allocator<_Tp>> iterator std::list< _Tp, _Alloc >::insert (const_iterator *__position,* value_type && *__x*) [inline]

Inserts given rvalue into list before specified iterator.

Parameters

__position	A const_iterator into the list.
__x	Data to be inserted.

Returns

An iterator that points to the inserted data.

This function will insert a copy of the given rvalue before the specified location. Due to the nature of a list this operation can be done in constant time, and does not invalidate iterators and references.

Definition at line 1308 of file stl_list.h.

4.676.3.25 template<typename _Tp, typename _Alloc = std::allocator<_Tp>> iterator std::list< _Tp, _Alloc >::insert (const_iterator __p, initializer_list< value_type > __l) [inline]

Inserts the contents of an initializer_list into list before specified const_iterator.

Parameters

__p	A const_iterator into the list.
__l	An initializer_list of value_type.

Returns

An iterator pointing to the first element inserted (or __position).

This function will insert copies of the data in the initializer_list *l* into the list before the location specified by *p*.

This operation is linear in the number of elements inserted and does not invalidate iterators and references.

Definition at line 1327 of file stl_list.h.

4.676.3.26 template<typename _Tp , typename _Alloc > list< _Tp, _Alloc >::iterator list::insert (const_iterator __position, size_type __n, const value_type & __x)

Inserts a number of copies of given data into the list.

Parameters

__position	A const_iterator into the list.
__n	Number of elements to be inserted.
__x	Data to be inserted.

Returns

An iterator pointing to the first element inserted (or __position).

This function will insert a specified number of copies of the given data before the location specified by *position*.

This operation is linear in the number of elements inserted and does not invalidate iterators and references.

Definition at line 118 of file list.tcc.

References std::list< _Tp, _Alloc >::begin().

4.676.3.27 template<typename _Tp, typename _Alloc = std::allocator<_Tp>> template<typename _InputIterator , typename = std::_RequireInputIter<_InputIterator>> iterator std::list< _Tp, _Alloc >::insert (const_iterator __position, _InputIterator __first, _InputIterator __last)

Inserts a range into the list.

Parameters

__position	A const_iterator into the list.
__first	An input iterator.
__last	An input iterator.

Returns

An iterator pointing to the first element inserted (or __position).

This function will insert copies of the data in the range [*first*,*last*) into the list before the location specified by *position*.

This operation is linear in the number of elements inserted and does not invalidate iterators and references.

4.676.3.28 template<typename _Tp, typename _Alloc = std::allocator<_Tp>> size_type std::list< _Tp, _Alloc >::max_size ( ) const [inline],[noexcept]

Returns the size() of the largest possible list.

Definition at line 1065 of file stl_list.h.

4.676.3.29 template<typename _Tp , typename _Alloc > void list::merge (list< _Tp, _Alloc > && __x)

Merge sorted lists.

Parameters

__x	Sorted list to merge.

Assumes that both *__x* and this list are sorted according to operator<(). Merges elements of *__x* into this list in sorted order, leaving *__x* empty when complete. Elements in this list precede elements in *__x* that are equal.

Definition at line 394 of file list.tcc.

References std::__addressof(), std::list< _Tp, _Alloc >::begin(), std::begin(), std::distance(), std::list< _Tp, _Alloc >::end(), std::end(), and std::list< _Tp, _Alloc >::size().

Referenced by std::list< _Tp, _Alloc >::sort().

4.676.3.30 template<typename _Tp , typename _Alloc > template<typename _StrictWeakOrdering > void list::merge (list< _Tp, _Alloc > && __x, _StrictWeakOrdering __comp)

Merge sorted lists according to comparison function.

Template Parameters

_StrictWeakOrdering	Comparison function defining sort order.

Parameters

__x	Sorted list to merge.
__comp	Comparison functor.

Assumes that both *__x* and this list are sorted according to StrictWeakOrdering. Merges elements of *__x* into this list in sorted order, leaving *__x* empty when complete. Elements in this list precede elements in *__x* that are equivalent according to StrictWeakOrdering().

Definition at line 441 of file list.tcc.

References std::__addressof(), std::list< _Tp, _Alloc >::begin(), std::begin(), std::distance(), std::list< _Tp, _Alloc >::end(), std::end(), and std::list< _Tp, _Alloc >::size().

4.676.3.31 template<typename _Tp , typename _Alloc > list< _Tp, _Alloc > & list::operator= (const list< _Tp, _Alloc > & __x)

List assignment operator.

Parameters

__x	A list of identical element and allocator types.

All the elements of *__x* are copied.

Whether the allocator is copied depends on the allocator traits.

Definition at line 268 of file list.tcc.

References std::__addressof(), std::list< _Tp, _Alloc >::begin(), and std::list< _Tp, _Alloc >::end().

4.676.3.32 template<typename _Tp, typename _Alloc = std::allocator<_Tp>> list& std::list< _Tp, _Alloc >::operator= (list< _Tp, _Alloc > && *__x*) [inline], [noexcept]

List move assignment operator.

Parameters

__x	A list of identical element and allocator types.

The contents of *__x* are moved into this list (without copying).

Afterwards *__x* is a valid, but unspecified list

Whether the allocator is moved depends on the allocator traits.

Definition at line 853 of file stl_list.h.

4.676.3.33 template<typename _Tp, typename _Alloc = std::allocator<_Tp>> list& std::list< _Tp, _Alloc >::operator= (initializer_list< value_type > *__l*) [inline]

List initializer list assignment operator.

Parameters

__l	An initializer_list of value_type.

Replace the contents of the list with copies of the elements in the initializer_list *__l*. This is linear in l.size().

Definition at line 871 of file stl_list.h.

4.676.3.34 template<typename _Tp, typename _Alloc = std::allocator<_Tp>> void std::list< _Tp, _Alloc >::pop_back ( ) [inline], [noexcept]

Removes last element.

This is a typical stack operation. It shrinks the list by one. Due to the nature of a list this operation can be done in constant time, and only invalidates iterators/references to the element being removed.

Note that no data is returned, and if the last element's data is needed, it should be retrieved before pop_back() is called.

Definition at line 1246 of file stl_list.h.

4.676.3.35 template<typename _Tp, typename _Alloc = std::allocator<_Tp>> void std::list< _Tp, _Alloc >::pop_front ( ) [inline], [noexcept]

Removes first element.

This is a typical stack operation. It shrinks the list by one. Due to the nature of a list this operation can be done in constant time, and only invalidates iterators/references to the element being removed.

Note that no data is returned, and if the first element's data is needed, it should be retrieved before pop_front() is called.

Definition at line 1197 of file stl_list.h.

4.676.3.36 template<typename _Tp, typename _Alloc = std::allocator<_Tp>> void std::list< _Tp, _Alloc >::push_back (const value_type & __x) [inline]

Add data to the end of the list.

Parameters

__x	Data to be added.

This is a typical stack operation. The function creates an element at the end of the list and assigns the given data to it. Due to the nature of a list this operation can be done in constant time, and does not invalidate iterators and references.

Definition at line 1211 of file stl_list.h.

4.676.3.37 template<typename _Tp, typename _Alloc = std::allocator<_Tp>> void std::list< _Tp, _Alloc >::push_front (const value_type & *__x*) [inline]

Add data to the front of the list.

Parameters

__x	Data to be added.

This is a typical stack operation. The function creates an element at the front of the list and assigns the given data to it. Due to the nature of a list this operation can be done in constant time, and does not invalidate iterators and references.

Definition at line 1161 of file stl_list.h.

4.676.3.38 template<typename _Tp, typename _Alloc = std::allocator<_Tp>> reverse_iterator std::list< _Tp, _Alloc >::rbegin ( ) [inline], [noexcept]

Returns a read/write reverse iterator that points to the last element in the list. Iteration is done in reverse element order.

Definition at line 981 of file stl_list.h.

4.676.3.39 template<typename _Tp, typename _Alloc = std::allocator<_Tp>> const_reverse_iterator std::list< _Tp, _Alloc >::rbegin ( ) const [inline], [noexcept]

Returns a read-only (constant) reverse iterator that points to the last element in the list. Iteration is done in reverse element order.

Definition at line 990 of file stl_list.h.

4.676.3.40 template<typename _Tp, typename _Alloc > list< _Tp, _Alloc >::__remove_return_type list::remove (const _Tp & *__value*)

Remove all elements equal to value.

Parameters

__value	The value to remove.

Removes every element in the list equal to *value*. Remaining elements stay in list order. Note that this function only erases the elements, and that if the elements themselves are pointers, the pointed-to memory is not touched in any way. Managing the pointer is the user's responsibility.

Definition at line 332 of file list.tcc.

References std::__addressof(), std::begin(), and std::end().

4.676.3.41 template<typename _Tp, typename _Alloc = std::allocator<_Tp>> template<typename _Predicate > __remove_return_type std::list< _Tp, _Alloc >::remove_if (_Predicate)

Remove all elements satisfying a predicate.

Template Parameters

_Predicate	Unary predicate function or object.

Removes every element in the list for which the predicate returns true. Remaining elements stay in list order. Note that this function only erases the elements, and that if the elements themselves are pointers, the pointed-to memory is not touched in any way. Managing the pointer is the user's responsibility.

4.676.3.42 template<typename _Tp, typename _Alloc = std::allocator<_Tp>> reverse_iterator std::list< _Tp, _Alloc >::rend ( ) [inline], [noexcept]

Returns a read/write reverse iterator that points to one before the first element in the list. Iteration is done in reverse element order.

Definition at line 999 of file stl_list.h.

4.676.3.43 template<typename _Tp, typename _Alloc = std::allocator<_Tp>> const_reverse_iterator std::list< _Tp, _Alloc >::rend ( ) const [inline], [noexcept]

Returns a read-only (constant) reverse iterator that points to one before the first element in the list. Iteration is done in reverse element order.

Definition at line 1008 of file stl_list.h.

4.676.3.44 template<typename _Tp , typename _Alloc > void list::resize (size_type *__new_size*)

Resizes the list to the specified number of elements.

Parameters

__new_size	Number of elements the list should contain.

This function will resize the list to the specified number of elements. If the number is smaller than the list's current size the list is truncated, otherwise default constructed elements are appended.

Definition at line 231 of file list.tcc.

References std::end().

4.676.3.45 template<typename _Tp , typename _Alloc > void list::resize (size_type *__new_size,* const value_type & *__x*)

Resizes the list to the specified number of elements.

Parameters

__new_size	Number of elements the list should contain.
__x	Data with which new elements should be populated.

This function will resize the list to the specified number of elements. If the number is smaller than the list's current size the list is truncated, otherwise the list is extended and new elements are populated with given data.

Definition at line 243 of file list.tcc.

References std::end().

4.676.3.46 template<typename _Tp, typename _Alloc = std::allocator<_Tp>> void std::list< _Tp, _Alloc >::reverse ( ) [inline], [noexcept]

Reverse the elements in list.

Reverse the order of elements in the list in linear time.

Definition at line 1798 of file stl_list.h.

4.676.3.47 template<typename _Tp, typename _Alloc = std::allocator<_Tp>> size_type std::list< _Tp, _Alloc >::size ( ) const [inline], [noexcept]

Returns the number of elements in the list.

Definition at line 1060 of file stl_list.h.

Referenced by std::list< _Tp, _Alloc >::merge(), and std::operator==().

4.676.3.48 template<typename _Tp , typename _Alloc > void list::sort ( )

Sort the elements.

Sorts the elements of this list in NlogN time. Equivalent elements remain in list order.

Definition at line 487 of file list.tcc.

References std::list< _Tp, _Alloc >::begin(), std::begin(), std::list< _Tp, _Alloc >::empty(), std::end(), std::list< _Tp, _Alloc >::merge(), std::list< _Tp, _Alloc >::splice(), and std::list< _Tp, _Alloc >::swap().

4.676.3.49 template<typename _Tp , typename _Alloc > template<typename _StrictWeakOrdering > void list::sort (_StrictWeakOrdering __comp)

Sort the elements according to comparison function.

Sorts the elements of this list in NlogN time. Equivalent elements remain in list order.

Definition at line 585 of file list.tcc.

References std::list< _Tp, _Alloc >::begin(), std::begin(), std::list< _Tp, _Alloc >::empty(), std::end(), std::list< _Tp, _Alloc >::merge(), std::list< _Tp, _Alloc >::splice(), and std::list< _Tp, _Alloc >::swap().

4.676.3.50 template<typename _Tp, typename _Alloc = std::allocator<_Tp>> void std::list< _Tp, _Alloc >::splice (const_iterator __position, list< _Tp, _Alloc > && __x) [inline], [noexcept]

Insert contents of another list.

Parameters

__position	Iterator referencing the element to insert before.
__x	Source list.

The elements of *__x* are inserted in constant time in front of the element referenced by *__position*. *__x* becomes an empty list.

Requires this != *__x*.

Definition at line 1518 of file stl_list.h.

Referenced by std::list< _Tp, _Alloc >::sort(), and std::list< __inp, __rebind_inp >::splice().

4.676.3.51 template<typename _Tp, typename _Alloc = std::allocator<_Tp>> void std::list< _Tp, _Alloc >::splice (const_iterator __position, list< _Tp, _Alloc > && __x, const_iterator __i) [inline], [noexcept]

Insert element from another list.

Parameters

__position	Const_iterator referencing the element to insert before.
__x	Source list.

__i	Const_iterator referencing the element to move.

Removes the element in list *__x* referenced by *__i* and inserts it into the current list before *__position*.

Definition at line 1553 of file stl_list.h.

4.676.3.52 template<typename _Tp, typename _Alloc = std::allocator<_Tp>> void std::list< _Tp, _Alloc >::splice (const_iterator *__position,* list< _Tp, _Alloc > & *__x,* const_iterator *__i*) [inline],[noexcept]

Insert element from another list.

Parameters

__position	Const_iterator referencing the element to insert before.
__x	Source list.
__i	Const_iterator referencing the element to move.

Removes the element in list *__x* referenced by *__i* and inserts it into the current list before *__position*.

Definition at line 1595 of file stl_list.h.

4.676.3.53 template<typename _Tp, typename _Alloc = std::allocator<_Tp>> void std::list< _Tp, _Alloc >::splice (const_iterator *__position,* list< _Tp, _Alloc > && *__x,* const_iterator *__first,* const_iterator *__last*) [inline],[noexcept]

Insert range from another list.

Parameters

__position	Const_iterator referencing the element to insert before.
__x	Source list.
__first	Const_iterator referencing the start of range in x.
__last	Const_iterator referencing the end of range in x.

Removes elements in the range [__first,__last) and inserts them before *__position* in constant time.

Undefined if *__position* is in [__first,__last).

Definition at line 1614 of file stl_list.h.

4.676.3.54 template<typename _Tp, typename _Alloc = std::allocator<_Tp>> void std::list< _Tp, _Alloc >::splice (const_iterator *__position,* list< _Tp, _Alloc > & *__x,* const_iterator *__first,* const_iterator *__last*) [inline],[noexcept]

Insert range from another list.

Parameters

__position	Const_iterator referencing the element to insert before.
__x	Source list.
__first	Const_iterator referencing the start of range in x.
__last	Const_iterator referencing the end of range in x.

Removes elements in the range [__first,__last) and inserts them before *__position* in constant time.

Undefined if *__position* is in [__first,__last).

Definition at line 1664 of file stl_list.h.

4.676.3.55 template<typename _Tp, typename _Alloc = std::allocator<_Tp>> void std::list< _Tp, _Alloc >::swap (list< _Tp, _Alloc > & *__x*) [inline],[noexcept]

Swaps data with another list.

Parameters

__x	A list of the same element and allocator types.

This exchanges the elements between two lists in constant time. Note that the global std::swap() function is specialized such that std::swap(l1,l2) will feed to this function.

Whether the allocators are swapped depends on the allocator traits.

Definition at line 1478 of file stl_list.h.

Referenced by std::list< _Tp, _Alloc >::sort().

4.676.3.56 template<typename _Tp , typename _Alloc > list< _Tp, _Alloc >::__remove_return_type list::unique ( )

Remove consecutive duplicate elements.

For each consecutive set of elements with the same value, remove all but the first one. Remaining elements stay in list order. Note that this function only erases the elements, and that if the elements themselves are pointers, the pointed-to memory is not touched in any way. Managing the pointer is the user's responsibility.

Definition at line 368 of file list.tcc.

References std::begin(), and std::end().

4.676.3.57 template<typename _Tp, typename _Alloc = std::allocator<_Tp>> template<typename _BinaryPredicate > __remove_return_type std::list< _Tp, _Alloc >::unique (_BinaryPredicate)

Remove consecutive elements satisfying a predicate.

Template Parameters

_BinaryPredicate	Binary predicate function or object.

For each consecutive set of elements [first,last) that satisfy predicate(first,i) where i is an iterator in [first,last), remove all but the first one. Remaining elements stay in list order. Note that this function only erases the elements, and that if the elements themselves are pointers, the pointed-to memory is not touched in any way. Managing the pointer is the user's responsibility.

4.677 __gnu_pbds::list_update< Key, Mapped, Eq_Fn, Update_Policy, _Alloc > Class Template Reference

Inherits type< Key, Mapped, _Alloc, list_update_tag, __gnu_cxx::typelist::create2< Eq_Fn, Update_Policy >::type >.

Public Types

- typedef list_update_tag **container_category**
- typedef Eq_Fn **eq_fn**
- typedef Update_Policy **update_policy**

Public Member Functions

- template<typename It >
  list_update (It first, It last)
- **list_update** (const list_update &other)

- list_update & **operator=** (const list_update &other)

- void **swap** (list_update &other)

4.677.1 Detailed Description

template<typename Key, typename Mapped, class Eq_Fn = typename detail::default_eq_fn<Key>::type, class Update_Policy = detail::default_update_policy::type, class _Alloc = std::allocator<char>>class __gnu_pbds::list_update< Key, Mapped, Eq_Fn, Update_Policy, _Alloc >

A list-update based associative container.

Template Parameters

Key	Key type.
Mapped	Map type.
Eq_Fn	Equal functor.
Update_Policy	Update policy, determines when an element will be moved to the front of the list.
_Alloc	Allocator type.

Base is detail::lu_map.

Definition at line 815 of file assoc_container.hpp.

4.677.2 Constructor & Destructor Documentation

4.677.2.1 template<typename Key , typename Mapped , class Eq_Fn = typename detail::default_eq_fn<Key>::type, class Update_Policy = detail::default_update_policy::type, class _Alloc = std::allocator<char>> template<typename It > __gnu_pbds::list_update< Key, Mapped, Eq_Fn, Update_Policy, _Alloc >::list_update (It *first,* It *last*) [inline]

Constructor taking __iterators to a range of value_types. The value_types between first_it and last_it will be inserted into the container object.

Definition at line 831 of file assoc_container.hpp.

4.679.1 Detailed Description

Container class for localization functionality.

The locale class is first a class wrapper for C library locales. It is also an extensible container for user-defined localization. A locale is a collection of facets that implement various localization features such as money, time, and number printing.

Constructing C++ locales does not change the C library locale.

This library supports efficient construction and copying of locales through a reference counting implementation of the locale class.

Definition at line 62 of file locale_classes.h.

4.679.2 Member Typedef Documentation

4.679.2.1 typedef int std::locale::category

Definition of locale::category.

Definition at line 67 of file locale_classes.h.

4.679.3 Constructor & Destructor Documentation

4.679.3.1 std::locale::locale ( ) throw)

Default constructor.

Constructs a copy of the global locale. If no locale has been explicitly set, this is the C locale.

Referenced by combine().

4.679.3.2 std::locale::locale (const locale & *__other*) throw)

Copy constructor.

Constructs a copy of *other*.

Parameters

__other	The locale to copy.

4.679.3.3 std::locale::locale (const char * *__s*) [explicit]

Named locale constructor.

Constructs a copy of the named C library locale.

Parameters

__s	Name of the locale to construct.

Exceptions

std::runtime_error	if __s is null or an undefined locale.

4.679.3.4 std::locale::locale (const locale & *__base,* const char * *__s,* category *__cat*)

Construct locale with facets from another locale.

Constructs a copy of the locale *base*. The facets specified by *cat* are replaced with those from the locale named by *s*. If base is named, this locale instance will also be named.

Parameters

__base	The locale to copy.
__s	Name of the locale to use facets from.
__cat	Set of categories defining the facets to use from __s.

Exceptions

std::runtime_error	if __s is null or an undefined locale.

4.679.3.5 std::locale::locale (const std::string & __s) [inline],[explicit]

Named locale constructor.

Constructs a copy of the named C library locale.

Parameters

__s	Name of the locale to construct.

Exceptions

std::runtime_error	if __s is an undefined locale.

Definition at line 163 of file locale_classes.h.

4.679.3.6 std::locale::locale (const locale & *__base*, const std::string & *__s*, category *__cat*) [inline]

Construct locale with facets from another locale.

Constructs a copy of the locale *base*. The facets specified by *cat* are replaced with those from the locale named by *s*. If base is named, this locale instance will also be named.

Parameters

__base	The locale to copy.
__s	Name of the locale to use facets from.
__cat	Set of categories defining the facets to use from __s.

Exceptions

std::runtime_error	if __s is an undefined locale.

Definition at line 177 of file locale_classes.h.

4.679.3.7 std::locale::locale (const locale & *__base*, const locale & *__add*, category *__cat*)

Construct locale with facets from another locale.

Constructs a copy of the locale *base*. The facets specified by *cat* are replaced with those from the locale *add*. If *base* and *add* are named, this locale instance will also be named.

Parameters

__base	The locale to copy.
__add	The locale to use facets from.
__cat	Set of categories defining the facets to use from add.

4.679.3.8 template<typename _Facet> std::locale::locale (const locale & *__other*, _Facet * *__f*)

Construct locale with another facet.

Constructs a copy of the locale *__other*. The facet *__f* is added to *__other*, replacing an existing facet of type Facet if there is one. If *__f* is null, this locale is a copy of *__other*.

Parameters

__other	The locale to copy.
__f	The facet to add in.

Definition at line 45 of file locale_classes.tcc.

4.679.3.9 std::locale::~locale ( ) throw)

Locale destructor.

4.679.4 Member Function Documentation

4.679.4.1 static const locale& std::locale::classic ( ) [static]

Return reference to the C locale.

4.679.4.2 template<typename _Facet> locale std::locale::combine (const locale & *__other*) const

Construct locale with another facet.

Constructs and returns a new copy of this locale. Adds or replaces an existing facet of type Facet from the locale *other* into the new locale.

Template Parameters

_Facet	The facet type to copy from other

Parameters

__other	The locale to copy from.

Returns

Newly constructed locale.

Exceptions

std::runtime_error	if __other has no facet of type _Facet.

Definition at line 63 of file locale_classes.tcc.

References locale().

4.679.4.3 static locale std::locale::global (const locale & *__loc*) [static]

Set global locale.

This function sets the global locale to the argument and returns a copy of the previous global locale. If the argument has a name, it will also call std::setlocale(LC_ALL, loc.name()).

Parameters

__loc	The new locale to make global.

Returns

Copy of the old global locale.

4.679.4.4 _GLIBCXX_DEFAULT_ABI_TAG string std::locale::name ( ) const

Return locale name.

Returns

Locale name or "*" if unnamed.

4.679.4.5 bool std::locale::operator!= (const locale & *__other*) const throw) [inline]

Locale inequality.

Parameters

__other	The locale to compare against.

Returns

! (*this == __other)

Definition at line 265 of file locale_classes.h.

References operator==().

4.679.4.6 template<typename _Char , typename _Traits , typename _Alloc > bool std::locale::operator() (const basic_string< _Char, _Traits, _Alloc > & *__s1*, const basic_string< _Char, _Traits, _Alloc > & *__s2*) const

Compare two strings according to collate.

Template operator to compare two strings using the compare function of the collate facet in this locale. One use is to provide the locale to the sort function. For example, a vector v of strings could be sorted according to locale loc by doing:

```
std::sort(v.begin(), v.end(), loc);
```

Parameters

__s1	First string to compare.
__s2	Second string to compare.

Returns

True if collate<_Char> facet compares __s1 < __s2, else false.

4.679.4.7 const locale& std::locale::operator= (const locale & *__other*) throw)

Assignment operator.

Set this locale to be a copy of *other*.

Parameters

__other	The locale to copy.

Returns

A reference to this locale.

4.679.4.8 bool std::locale::operator== (const locale & __other) const throw)

Locale equality.

Parameters

__other	The locale to compare against.

Returns

True if other and this refer to the same locale instance, are copies, or have the same name. False otherwise.

Referenced by operator!=().

4.679.5 Friends And Related Function Documentation

4.679.5.1 template<typename _Facet > bool has_facet (const locale &) throw) [friend]

Test for the presence of a facet.

has_facet tests the locale argument for the presence of the facet type provided as the template parameter. Facets derived from the facet parameter will also return true.

Template Parameters

_Facet	The facet type to test the presence of.

Parameters

__loc	The locale to test.

Returns

true if `__loc` contains a facet of type _Facet, else false.

Definition at line 104 of file locale_classes.tcc.

4.679.5.2 template<typename _Facet > const _Facet& use_facet (const locale &) [friend]

Return a facet.

use_facet looks for and returns a reference to a facet of type Facet where Facet is the template parameter. If has_facet(locale) is true, there is a suitable facet to return. It throws std::bad_cast if the locale doesn't contain a facet of type Facet.

Template Parameters

_Facet	The facet type to access.

Parameters

__loc	The locale to use.

Returns

Reference to facet of type Facet.

Exceptions

std::bad_cast	if `__loc` doesn't contain a facet of type _Facet.

Definition at line 132 of file locale_classes.tcc.

4.679.6 Member Data Documentation

4.679.6.1 const category std::locale::all [static]

Category values.

The standard category values are none, ctype, numeric, collate, time, monetary, and messages. They form a bitmask that supports union and intersection. The category all is the union of these values.

NB: Order must match _S_facet_categories definition in locale.cc

Definition at line 105 of file locale_classes.h.

4.679.6.2 const category std::locale::collate [static]

Category values.

The standard category values are none, ctype, numeric, collate, time, monetary, and messages. They form a bitmask that supports union and intersection. The category all is the union of these values.

NB: Order must match _S_facet_categories definition in locale.cc

Definition at line 101 of file locale_classes.h.

4.679.6.3 const category std::locale::ctype [static]

Category values.

The standard category values are none, ctype, numeric, collate, time, monetary, and messages. They form a bitmask that supports union and intersection. The category all is the union of these values.

NB: Order must match _S_facet_categories definition in locale.cc

Definition at line 99 of file locale_classes.h.

4.679.6.4 const category std::locale::messages [static]

Category values.

The standard category values are none, ctype, numeric, collate, time, monetary, and messages. They form a bitmask that supports union and intersection. The category all is the union of these values.

NB: Order must match _S_facet_categories definition in locale.cc

Definition at line 104 of file locale_classes.h.

4.679.6.5 const category std::locale::monetary [static]

Category values.

The standard category values are none, ctype, numeric, collate, time, monetary, and messages. They form a bitmask that supports union and intersection. The category all is the union of these values.

NB: Order must match _S_facet_categories definition in locale.cc

Definition at line 103 of file locale_classes.h.

4.679.6.6 const category std::locale::none [static]

Category values.

The standard category values are none, ctype, numeric, collate, time, monetary, and messages. They form a bitmask that supports union and intersection. The category all is the union of these values.

NB: Order must match _S_facet_categories definition in locale.cc

Definition at line 98 of file locale_classes.h.

4.679.6.7 const category std::locale::numeric [static]

Category values.

The standard category values are none, ctype, numeric, collate, time, monetary, and messages. They form a bitmask that supports union and intersection. The category all is the union of these values.

NB: Order must match _S_facet_categories definition in locale.cc

Definition at line 100 of file locale_classes.h.

4.679.6.8 const category std::locale::time [static]

Category values.

The standard category values are none, ctype, numeric, collate, time, monetary, and messages. They form a bitmask that supports union and intersection. The category all is the union of these values.

NB: Order must match _S_facet_categories definition in locale.cc

Definition at line 102 of file locale_classes.h.

The documentation for this class was generated from the following files:

4.680 std::lock_guard< _Mutex > Class Template Reference

Public Types

- typedef _Mutex **mutex_type**

Public Member Functions

- **lock_guard** (mutex_type &__m)
- **lock_guard** (mutex_type &__m, adopt_lock_t) noexcept
- **lock_guard** (const lock_guard &)=delete
- lock_guard & **operator=** (const lock_guard &)=delete

4.680.1 Detailed Description

template<typename _Mutex>class std::lock_guard< _Mutex >

A simple scoped lock type.

A lock_guard controls mutex ownership within a scope, releasing ownership in the destructor.

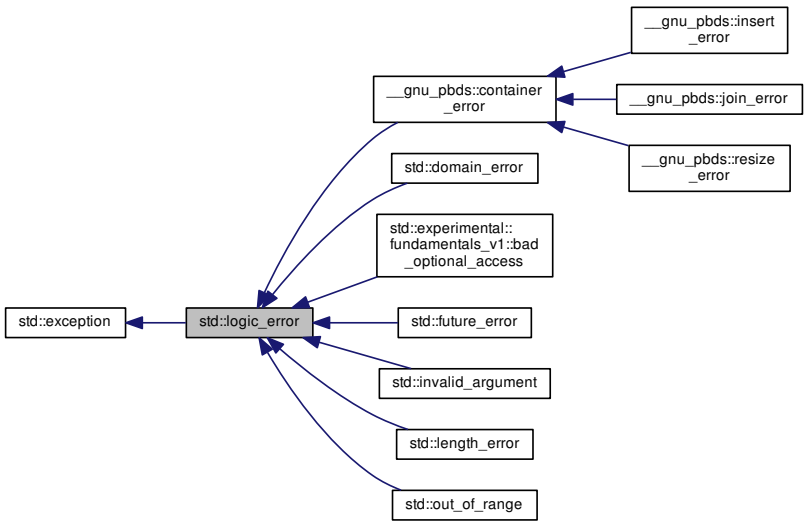
Definition at line 153 of file std_mutex.h.

The documentation for this class was generated from the following file:

- std_mutex.h

4.681 std::logic_error Class Reference

Inheritance diagram for std::logic_error:



Public Member Functions

- logic_error (const string &__arg) _GLIBCXX_TXN_SAFE
- **logic_error** (const char *) _GLIBCXX_TXN_SAFE
- **logic_error** (logic_error &&) noexcept
- **logic_error** (const logic_error &)=default
- logic_error & **operator=** (logic_error &&) noexcept
- logic_error & **operator=** (const logic_error &)=default
- virtual const char * what () const noexcept

4.681.1 Detailed Description

One of two subclasses of exception.

Logic errors represent problems in the internal logic of a program; in theory, these are preventable, and even detectable before the program runs (e.g., violations of class invariants).

Definition at line 113 of file stdexcept.

4.681.2 Constructor & Destructor Documentation

4.681.2.1 std::logic_error::logic_error (const string & *__arg*) [explicit]

Takes a character string describing the error.

4.681.3 Member Function Documentation

4.681.3.1 virtual const char* std::logic_error::what ( ) const [virtual], [noexcept]

Returns a C-style character string describing the general cause of the current error (the same string passed to the ctor).

Reimplemented from std::exception.

Reimplemented in std::future_error.

The documentation for this class was generated from the following file:

- stdexcept

4.682 std::logical_and< _Tp > Struct Template Reference

Inheritance diagram for std::logical_and< _Tp >:

4.688.1 Detailed Description

template<typename _RealType = double>class std::lognormal_distribution< _RealType >

A lognormal_distribution random number distribution.

The formula for the normal probability mass function is

$$p(x|m,s) = \frac{1}{sx\sqrt{2\pi}} \exp -\frac{(\ln x - m)^2}{2s^2}$$

Definition at line 2182 of file random.h.

4.688.2 Member Typedef Documentation

4.688.2.1 template<typename _RealType = double> typedef _RealType std::lognormal_distribution< _RealType >::result_type

The type of the range of the distribution.

Definition at line 2185 of file random.h.

4.688.3 Member Function Documentation

4.688.3.1 template<typename _RealType = double> result_type std::lognormal_distribution< _RealType >::max ( ) const [inline]

Returns the least upper bound value of the distribution.

Definition at line 2280 of file random.h.

References std::numeric_limits< _Tp >::max().

4.688.3.2 template<typename _RealType = double> result_type std::lognormal_distribution< _RealType >::min ( ) const [inline]

Returns the greatest lower bound value of the distribution.

Definition at line 2273 of file random.h.

4.688.3.3 template<typename _RealType = double> template<typename _UniformRandomNumberGenerator > result_type std::lognormal_distribution< _RealType >::operator() (_UniformRandomNumberGenerator & *__urng*) [inline]

Generating functions.

Definition at line 2288 of file random.h.

4.688.3.4 template<typename _RealType = double> param_type std::lognormal_distribution< _RealType >::param ( ) const [inline]

Returns the parameter set of the distribution.

Definition at line 2258 of file random.h.

4.688.3.5 template<typename _RealType = double> void std::lognormal_distribution< _RealType >::param (const param_type & *__param*) [inline]

Sets the parameter set of the distribution.

Parameters

__param	The new parameter set of the distribution.

Definition at line 2266 of file random.h.

4.688.3.6 template<typename _RealType = double> void std::lognormal_distribution< _RealType >::reset ( ) [inline]

Resets the distribution state.

Definition at line 2240 of file random.h.

References std::normal_distribution< _RealType >::reset().

4.688.4 Friends And Related Function Documentation

4.688.4.1 template<typename _RealType = double> template<typename _RealType1 , typename _CharT , typename _Traits > std::basic_ostream<_CharT, _Traits>& operator<< (std::basic_ostream< _CharT, _Traits > & *__os,* const std::lognormal_distribution< _RealType1 > & *__x*) [friend]

Inserts a lognormal_distribution random number distribution __x into the output stream __os.

Parameters

__os	An output stream.
__x	A lognormal_distribution random number distribution.

Returns

The output stream with the state of __x inserted or in an error state.

4.688.4.2 template<typename _RealType = double> bool operator== (const lognormal_distribution< _RealType > & *__d1,* const lognormal_distribution< _RealType > & *__d2*) [friend]

Return true if two lognormal distributions have the same parameters and the sequences that would be generated are equal.

Definition at line 2325 of file random.h.

4.688.4.3 template<typename _RealType = double> template<typename _RealType1 , typename _CharT , typename _Traits > std::basic_istream<_CharT, _Traits>& operator>> (std::basic_istream< _CharT, _Traits > & *__is,* std::lognormal_distribution< _RealType1 > & *__x*) [friend]

Extracts a lognormal_distribution random number distribution __x from the input stream __is.

Parameters

__is	An input stream.
__x	A lognormal_distribution random number generator engine.

Returns

The input stream with __x extracted or in an error state.

4.692.1 Detailed Description

template<typename Key, typename Mapped, typename Eq_Fn, typename _Alloc, typename Update_Policy>class __gnu_pbds::detail::lu_map< Key, Mapped, Eq_Fn, _Alloc, Update_Policy >

list-based (with updates) associative container. Skip to the lu, my darling.

Definition at line 91 of file lu_map_.hpp.

The documentation for this class was generated from the following file:

- lu_map_.hpp

4.693 __gnu_pbds::lu_move_to_front_policy< _Alloc > Class Template Reference

Public Types

- typedef _Alloc **allocator_type**
- typedef detail::rebind_traits
  < _Alloc, metadata_type >
  ::reference metadata_reference
- typedef null_type metadata_type

Public Member Functions

- metadata_type operator() () const
- bool operator() (metadata_reference r_metadata) const

4.693.1 Detailed Description

template<typename _Alloc = std::allocator<char>>class __gnu_pbds::lu_move_to_front_policy< _Alloc >

A list-update policy that unconditionally moves elements to the front of the list. A null type means that each link in a list-based container does not actually need metadata.

Definition at line 58 of file list_update_policy.hpp.

4.693.2 Member Typedef Documentation

4.693.2.1 template<typename _Alloc = std::allocator<char>> typedef detail::rebind_traits<_Alloc, metadata_type>::reference __gnu_pbds::lu_move_to_front_policy< _Alloc >::metadata_reference

Reference to metadata on which this functor operates.

Definition at line 69 of file list_update_policy.hpp.

4.693.2.2 template<typename _Alloc = std::allocator<char>> typedef null_type __gnu_pbds::lu_move_to_front_policy< _Alloc >::metadata_type

Metadata on which this functor operates.

Definition at line 64 of file list_update_policy.hpp.

4.693.3 Member Function Documentation

4.693.3.1 template<typename _Alloc = std::allocator<char>> metadata_type __gnu_pbds::lu_move_to_front_policy< _Alloc >::operator() ( ) const [inline]

Creates a metadata object.

Definition at line 73 of file list_update_policy.hpp.

4.693.3.2 template<typename _Alloc = std::allocator<char>> bool __gnu_pbds::lu_move_to_front_policy< _Alloc >::operator() (metadata_reference *r_metadata*) const [inline]

Decides whether a metadata object should be moved to the front of the list.

Definition at line 79 of file list_update_policy.hpp.

The documentation for this class was generated from the following file:

- list_update_policy.hpp

4.694 std::make_signed< _Tp > Struct Template Reference

Public Types

- typedef __make_signed_selector < _Tp >::__type **type**

4.694.1 Detailed Description

template<typename _Tp>struct std::make_signed< _Tp >

make_signed

Definition at line 1951 of file type_traits.

The documentation for this struct was generated from the following file:

- type_traits

4.695 std::make_unsigned< _Tp > Struct Template Reference

Public Types

- typedef __make_unsigned_selector< _Tp > ::__type **type**

4.695.1 Detailed Description

template<typename _Tp>struct std::make_unsigned< _Tp >

make_unsigned

Definition at line 1825 of file type_traits.

The documentation for this struct was generated from the following file:

- type_traits

4.696 __gnu_cxx::malloc_allocator< _Tp > Class Template Reference

Public Types

- typedef const _Tp * **const_pointer**

4.697.1 Detailed Description

template<typename _Key, typename _Tp, typename _Compare = std::less<_Key>, typename _Allocator = std::allocator<std::pair<const _Key, _Tp> >>class std::__debug::map< _Key, _Tp, _Compare, _Allocator >

Class std::map with safety/checking/debug instrumentation.

Definition at line 44 of file map.h.

4.697.2 Member Function Documentation

4.697.2.1 void __gnu_debug::_Safe_sequence_base::_M_detach_all ( ) [protected], [inherited]

Detach all iterators, leaving them singular.

Referenced by __gnu_debug::_Safe_sequence_base::~_Safe_sequence_base().

4.697.2.2 void __gnu_debug::_Safe_sequence_base::_M_detach_singular ( ) [protected], [inherited]

Detach all singular iterators.

Postcondition

for all iterators i attached to this sequence, i->_M_version == _M_version.

4.697.2.3 __gnu_cxx::__mutex& __gnu_debug::_Safe_sequence_base::_M_get_mutex ( ) throw) [protected], [inherited]

For use in _Safe_sequence.

Referenced by __gnu_debug::_Safe_sequence< _Sequence >::_M_transfer_from_if().

4.697.2.4 void __gnu_debug::_Safe_sequence_base::_M_invalidate_all ( ) const [inline], [protected], [inherited]

Invalidates all iterators.

Definition at line 256 of file safe_base.h.

References __gnu_debug::_Safe_sequence_base::_M_version.

4.697.2.5 void __gnu_debug::_Safe_sequence< map< _Key, _Tp, _Compare, _Allocator > >::_M_invalidate_if (_Predicate __pred) [inherited]

Invalidates all iterators `x` that reference this sequence, are not singular, and for which `__pred(x)` returns `true`. `__pred` will be invoked with the normal iterators nested in the safe ones.

4.697.2.6 void __gnu_debug::_Safe_sequence_base::_M_revalidate_singular ( ) [protected], [inherited]

Revalidates all attached singular iterators. This method may be used to validate iterators that were invalidated before (but for some reason, such as an exception, need to become valid again).

4.697.2.7 void __gnu_debug::_Safe_sequence_base::_M_swap (_Safe_sequence_base & __x) [protected], [noexcept], [inherited]

Swap this sequence with the given sequence. This operation also swaps ownership of the iterators, so that when the operation is complete all iterators that originally referenced one container now reference the other container.

4.697.2.8 void __gnu_debug::_Safe_sequence< map< _Key, _Tp, _Compare, _Allocator > >::_M_transfer_from_if (_Safe_sequence< map< _Key, _Tp, _Compare, _Allocator > > & __from, _Predicate __pred) [inherited]

Transfers all iterators `x` that reference `from` sequence, are not singular, and for which `__pred(x)` returns `true`. `__pred` will be invoked with the normal iterators nested in the safe ones.

4.697.3 Member Data Documentation

4.697.3.1 _Safe_iterator_base* __gnu_debug::_Safe_sequence_base::_M_const_iterators [inherited]

The list of constant iterators that reference this container.

Definition at line 197 of file safe_base.h.

Referenced by __gnu_debug::_Safe_sequence< _Sequence >::_M_transfer_from_if().

4.697.3.2 _Safe_iterator_base* __gnu_debug::_Safe_sequence_base::_M_iterators [inherited]

The list of mutable iterators that reference this container.

Definition at line 194 of file safe_base.h.

Referenced by __gnu_debug::_Safe_sequence< _Sequence >::_M_transfer_from_if().

4.697.3.3 unsigned int __gnu_debug::_Safe_sequence_base::_M_version [mutable], [inherited]

The container version number. This number may never be 0.

Definition at line 200 of file safe_base.h.

Referenced by __gnu_debug::_Safe_sequence_base::_M_invalidate_all().

The documentation for this class was generated from the following file:

4.698.1 Detailed Description

template<typename _Key, typename _Tp, typename _Compare = std::less<_Key>, typename _Alloc = std::allocator<std::pair<const _Key, _Tp> >>class std::map< _Key, _Tp, _Compare, _Alloc >

A standard container made up of (key,value) pairs, which can be retrieved based on a key, in logarithmic time.

Template Parameters

_Key	Type of key objects.
_Tp	Type of mapped objects.
_Compare	Comparison function object type, defaults to less<_Key>.
_Alloc	Allocator type, defaults to allocator<pair<const _Key, _Tp>.

Meets the requirements of a `container`, a `reversible container`, and an `associative container` (using unique keys). For a `map<Key,T>` the key_type is Key, the mapped_type is T, and the value_type is std::pair<const Key,T>.

Maps support bidirectional iterators.

The private tree data is declared exactly the same way for map and multimap; the distinction is made entirely in how the tree functions are called (*_unique versus *_equal, same as the standard).

Definition at line 100 of file stl_map.h.

4.698.2 Constructor & Destructor Documentation

4.698.2.1 template<typename _Key, typename _Tp, typename _Compare = std::less<_Key>, typename _Alloc = std::allocator<std::pair<const _Key, _Tp> >> std::map< _Key, _Tp, _Compare, _Alloc >::map ( ) [default]

Default constructor creates no elements.

4.698.2.2 template<typename _Key, typename _Tp, typename _Compare = std::less<_Key>, typename _Alloc = std::allocator<std::pair<const _Key, _Tp> >> std::map< _Key, _Tp, _Compare, _Alloc >::map (const _Compare & *__comp*, const allocator_type & *__a* = `allocator_type()`) [inline], [explicit]

Creates a map with no elements.

Parameters

__comp	A comparison object.
__a	An allocator object.

Definition at line 194 of file stl_map.h.

4.698.2.3 template<typename _Key, typename _Tp, typename _Compare = std::less<_Key>, typename _Alloc = std::allocator<std::pair<const _Key, _Tp> >> std::map< _Key, _Tp, _Compare, _Alloc >::map (const map< _Key, _Tp, _Compare, _Alloc > &) [default]

Map copy constructor.

Whether the allocator is copied depends on the allocator traits.

4.698.2.4 template<typename _Key, typename _Tp, typename _Compare = std::less<_Key>, typename _Alloc = std::allocator<std::pair<const _Key, _Tp> >> std::map< _Key, _Tp, _Compare, _Alloc >::map (map< _Key, _Tp, _Compare, _Alloc > &&) [default]

Map move constructor.

The newly-created map contains the exact contents of the moved instance. The moved instance is a valid, but unspecified, map.

4.698.2.5 template<typename _Key, typename _Tp, typename _Compare = std::less<_Key>, typename _Alloc = std::allocator<std::pair<const _Key, _Tp> >> std::map< _Key, _Tp, _Compare, _Alloc >::map (initializer_list< value_type > __l, const _Compare & __comp = _Compare(), const allocator_type & __a = allocator_type()) [inline]

Builds a map from an initializer_list.

Parameters

__l	An initializer_list.
__comp	A comparison object.
__a	An allocator object.

Create a map consisting of copies of the elements in the initializer_list *__l*. This is linear in N if the range is already sorted, and NlogN otherwise (where N is *__l.size()*).

Definition at line 228 of file stl_map.h.

4.698.2.6 template<typename _Key, typename _Tp, typename _Compare = std::less<_Key>, typename _Alloc = std::allocator<std::pair<const _Key, _Tp> >> std::map< _Key, _Tp, _Compare, _Alloc >::map (const allocator_type & __a) [inline], [explicit]

Allocator-extended default constructor.

Definition at line 236 of file stl_map.h.

4.698.2.7 template<typename _Key, typename _Tp, typename _Compare = std::less<_Key>, typename _Alloc = std::allocator<std::pair<const _Key, _Tp> >> std::map< _Key, _Tp, _Compare, _Alloc >::map (const map< _Key, _Tp, _Compare, _Alloc > & __m, const allocator_type & __a) [inline]

Allocator-extended copy constructor.

Definition at line 240 of file stl_map.h.

4.698.2.8 template<typename _Key, typename _Tp, typename _Compare = std::less<_Key>, typename _Alloc = std::allocator<std::pair<const _Key, _Tp> >> std::map< _Key, _Tp, _Compare, _Alloc >::map (map< _Key, _Tp, _Compare, _Alloc > && __m, const allocator_type & __a) [inline], [noexcept]

Allocator-extended move constructor.

Definition at line 244 of file stl_map.h.

4.698.2.9 template<typename _Key, typename _Tp, typename _Compare = std::less<_Key>, typename _Alloc = std::allocator<std::pair<const _Key, _Tp> >> std::map< _Key, _Tp, _Compare, _Alloc >::map (initializer_list< value_type > __l, const allocator_type & __a) [inline]

Allocator-extended initialier-list constructor.

Definition at line 250 of file stl_map.h.

4.698.2.10 template<typename _Key, typename _Tp, typename _Compare = std::less<_Key>, typename _Alloc = std::allocator<std::pair<const _Key, _Tp> >> template<typename _InputIterator > std::map< _Key, _Tp, _Compare, _Alloc >::map (_InputIterator __first, _InputIterator __last, const allocator_type & __a) [inline]

Allocator-extended range constructor.

Definition at line 256 of file stl_map.h.

4.698.2.11 template<typename _Key, typename _Tp, typename _Compare = std::less<_Key>, typename _Alloc = std::allocator<std::pair<const _Key, _Tp> >> template<typename _InputIterator > std::map< _Key, _Tp, _Compare, _Alloc >::map (_InputIterator __first, _InputIterator __last) [inline]

Builds a map from a range.

Parameters

__first	An input iterator.
__last	An input iterator.

Create a map consisting of copies of the elements from [__first,__last). This is linear in N if the range is already sorted, and NlogN otherwise (where N is distance(__first,__last)).

Definition at line 273 of file stl_map.h.

4.698.2.12 template<typename _Key, typename _Tp, typename _Compare = std::less<_Key>, typename _Alloc = std::allocator<std::pair<const _Key, _Tp> >> template<typename _InputIterator > std::map< _Key, _Tp, _Compare, _Alloc >::map (_InputIterator __first, _InputIterator __last, const _Compare & __comp, const allocator_type & __a = allocator_type()) [inline]

Builds a map from a range.

Parameters

__first	An input iterator.
__last	An input iterator.
__comp	A comparison functor.
__a	An allocator object.

Create a map consisting of copies of the elements from [__first,__last). This is linear in N if the range is already sorted, and NlogN otherwise (where N is distance(__first,__last)).

Definition at line 290 of file stl_map.h.

4.698.2.13 template<typename _Key, typename _Tp, typename _Compare = std::less<_Key>, typename _Alloc = std::allocator<std::pair<const _Key, _Tp> >> std::map< _Key, _Tp, _Compare, _Alloc >::~map ( ) [default]

The dtor only erases the elements, and note that if the elements themselves are pointers, the pointed-to memory is not touched in any way. Managing the pointer is the user's responsibility.

4.698.3 Member Function Documentation

4.698.3.1 template<typename _Key, typename _Tp, typename _Compare = std::less<_Key>, typename _Alloc = std::allocator<std::pair<const _Key, _Tp> >> mapped_type& std::map< _Key, _Tp, _Compare, _Alloc >::at (const key_type & __k) [inline]

Access to map data.

Parameters

__k	The key for which data should be retrieved.

Returns

A reference to the data whose key is equivalent to *__k*, if such a data is present in the map.

Exceptions

std::out_of_range	If no such data is present.

Definition at line 537 of file stl_map.h.

References std::map< _Key, _Tp, _Compare, _Alloc >::end(), std::map< _Key, _Tp, _Compare, _Alloc >::key_comp(), and std::map< _Key, _Tp, _Compare, _Alloc >::lower_bound().

4.698.3.2 template<typename _Key, typename _Tp, typename _Compare = std::less<_Key>, typename _Alloc = std::allocator<std::pair<const _Key, _Tp> >> iterator std::map< _Key, _Tp, _Compare, _Alloc >::begin ( ) [inline], [noexcept]

Returns a read/write iterator that points to the first pair in the map. Iteration is done in ascending order according to the keys.

Definition at line 356 of file stl_map.h.

4.698.3.3 template<typename _Key, typename _Tp, typename _Compare = std::less<_Key>, typename _Alloc = std::allocator<std::pair<const _Key, _Tp> >> const_iterator std::map< _Key, _Tp, _Compare, _Alloc >::begin ( ) const [inline], [noexcept]

Returns a read-only (constant) iterator that points to the first pair in the map. Iteration is done in ascending order according to the keys.

Definition at line 365 of file stl_map.h.

4.698.3.4 template<typename _Key, typename _Tp, typename _Compare = std::less<_Key>, typename _Alloc = std::allocator<std::pair<const _Key, _Tp> >> const_iterator std::map< _Key, _Tp, _Compare, _Alloc >::cbegin ( ) const [inline], [noexcept]

Returns a read-only (constant) iterator that points to the first pair in the map. Iteration is done in ascending order according to the keys.

Definition at line 429 of file stl_map.h.

4.698.3.5 template<typename _Key, typename _Tp, typename _Compare = std::less<_Key>, typename _Alloc = std::allocator<std::pair<const _Key, _Tp> >> const_iterator std::map< _Key, _Tp, _Compare, _Alloc >::cend ( ) const [inline], [noexcept]

Returns a read-only (constant) iterator that points one past the last pair in the map. Iteration is done in ascending order according to the keys.

Definition at line 438 of file stl_map.h.

4.698.3.6 template<typename _Key, typename _Tp, typename _Compare = std::less<_Key>, typename _Alloc = std::allocator<std::pair<const _Key, _Tp> >> void std::map< _Key, _Tp, _Compare, _Alloc >::clear ( ) [inline], [noexcept]

Erases all elements in a map. Note that this function only erases the elements, and that if the elements themselves are pointers, the pointed-to memory is not touched in any way. Managing the pointer is the user's responsibility.

Definition at line 1133 of file stl_map.h.

4.698.3.7 template<typename _Key, typename _Tp, typename _Compare = std::less<_Key>, typename _Alloc = std::allocator<std::pair<const _Key, _Tp> >> size_type std::map< _Key, _Tp, _Compare, _Alloc >::count (const key_type & __x) const [inline]

Finds the number of elements with given key.

Parameters

__x	Key of (key, value) pairs to be located.

Returns

Number of elements with specified key.

This function only makes sense for multimaps; for map the result will either be 0 (not present) or 1 (present).

Definition at line 1215 of file stl_map.h.

4.698.3.8 template<typename _Key, typename _Tp, typename _Compare = std::less<_Key>, typename _Alloc = std::allocator<std::pair<const _Key, _Tp> >> template<typename _Kt > auto std::map< _Key, _Tp, _Compare, _Alloc >::count (const _Kt & __x) const -> decltype(_M_t._M_count_tr(__x)) [inline]

Finds the number of elements with given key.

Parameters

__x	Key of (key, value) pairs to be located.

Returns

Number of elements with specified key.

This function only makes sense for multimaps; for map the result will either be 0 (not present) or 1 (present).

Definition at line 1221 of file stl_map.h.

4.698.3.9 template<typename _Key, typename _Tp, typename _Compare = std::less<_Key>, typename _Alloc = std::allocator<std::pair<const _Key, _Tp> >> const_reverse_iterator std::map< _Key, _Tp, _Compare, _Alloc >::crbegin ( ) const [inline], [noexcept]

Returns a read-only (constant) reverse iterator that points to the last pair in the map. Iteration is done in descending order according to the keys.

Definition at line 447 of file stl_map.h.

4.698.3.10 template<typename _Key, typename _Tp, typename _Compare = std::less<_Key>, typename _Alloc = std::allocator<std::pair<const _Key, _Tp> >> const_reverse_iterator std::map< _Key, _Tp, _Compare, _Alloc >::crend ( ) const [inline], [noexcept]

Returns a read-only (constant) reverse iterator that points to one before the first pair in the map. Iteration is done in descending order according to the keys.

Definition at line 456 of file stl_map.h.

4.698.3.11 template<typename _Key, typename _Tp, typename _Compare = std::less<_Key>, typename _Alloc = std::allocator<std::pair<const _Key, _Tp> >> template<typename... _Args> std::pair<iterator, bool> std::map< _Key, _Tp, _Compare, _Alloc >::emplace (_Args &&... *__args*) [inline]

Attempts to build and insert a std::pair into the map.

Parameters

__args	Arguments used to generate a new pair instance (see std::piecewise_contruct for passing arguments to each part of the pair constructor).

Returns

A pair, of which the first element is an iterator that points to the possibly inserted pair, and the second is a bool that is true if the pair was actually inserted.

This function attempts to build and insert a (key, value) pair into the map. A map relies on unique keys and thus a pair is only inserted if its first element (the key) is not already present in the map.

Insertion requires logarithmic time.

Definition at line 576 of file stl_map.h.

4.698.3.12 template<typename _Key, typename _Tp, typename _Compare = std::less<_Key>, typename _Alloc = std::allocator<std::pair<const _Key, _Tp> >> template<typename... _Args> iterator std::map< _Key, _Tp, _Compare, _Alloc >::emplace_hint (const_iterator *__pos*, _Args &&... *__args*) [inline]

Attempts to build and insert a std::pair into the map.

Parameters

__pos	An iterator that serves as a hint as to where the pair should be inserted.
__args	Arguments used to generate a new pair instance (see std::piecewise_contruct for passing arguments to each part of the pair constructor).

Returns

An iterator that points to the element with key of the std::pair built from *__args* (may or may not be that std::pair).

This function is not concerned about whether the insertion took place, and thus does not return a boolean like the single-argument emplace() does. Note that the first parameter is only a hint and can potentially improve the performance of the insertion process. A bad hint would cause no gains in efficiency.

See https://gcc.gnu.org/onlinedocs/libstdc++/manual/associative.html#containers.associative.insert_hints for more on *hinting*.

Insertion requires logarithmic time (if the hint is not taken).

Definition at line 606 of file stl_map.h.

4.698.3.13 template<typename _Key, typename _Tp, typename _Compare = std::less<_Key>, typename _Alloc = std::allocator<std::pair<const _Key, _Tp> >> bool std::map< _Key, _Tp, _Compare, _Alloc >::empty ( ) const [inline], [noexcept]

Returns true if the map is empty. (Thus begin() would equal end().)

Definition at line 465 of file stl_map.h.

4.698.3.14 template<typename _Key, typename _Tp, typename _Compare = std::less<_Key>, typename _Alloc = std::allocator<std::pair<const _Key, _Tp> >> iterator std::map< _Key, _Tp, _Compare, _Alloc >::end ( ) [inline], [noexcept]

Returns a read/write iterator that points one past the last pair in the map. Iteration is done in ascending order according to the keys.

Definition at line 374 of file stl_map.h.

Referenced by std::map< _Key, _Tp, _Compare, _Alloc >::at(), and std::map< _Key, _Tp, _Compare, _Alloc >::operator[]().

4.698.3.15 template<typename _Key, typename _Tp, typename _Compare = std::less<_Key>, typename _Alloc = std::allocator<std::pair<const _Key, _Tp> >> const_iterator std::map< _Key, _Tp, _Compare, _Alloc >::end ( ) const [inline], [noexcept]

Returns a read-only (constant) iterator that points one past the last pair in the map. Iteration is done in ascending order according to the keys.

Definition at line 383 of file stl_map.h.

4.698.3.16 template<typename _Key, typename _Tp, typename _Compare = std::less<_Key>, typename _Alloc = std::allocator<std::pair<const _Key, _Tp> >> std::pair<iterator, iterator> std::map< _Key, _Tp, _Compare, _Alloc >::equal_range (const key_type & __x) [inline]

Finds a subsequence matching given key.

Parameters

__x	Key of (key, value) pairs to be located.

Returns

Pair of iterators that possibly points to the subsequence matching given key.

This function is equivalent to

```
std::make_pair(c.lower_bound(val),
               c.upper_bound(val))
```

(but is faster than making the calls separately).

This function probably only makes sense for multimaps.

Definition at line 1352 of file stl_map.h.

4.698.3.17 template<typename _Key, typename _Tp, typename _Compare = std::less<_Key>, typename _Alloc = std::allocator<std::pair<const _Key, _Tp> >> template<typename _Kt > auto std::map< _Key, _Tp, _Compare, _Alloc >::equal_range (const _Kt & __x) -> decltype(pair<iterator, iterator>(_M_t._M_equal_range_tr(__x))) [inline]

Finds a subsequence matching given key.

Parameters

__x	Key of (key, value) pairs to be located.

Returns

Pair of iterators that possibly points to the subsequence matching given key.

This function is equivalent to

```
std::make_pair(c.lower_bound(val),
               c.upper_bound(val))
```

(but is faster than making the calls separately).

This function probably only makes sense for multimaps.

Definition at line 1358 of file stl_map.h.

4.698.3.18 template<typename _Key, typename _Tp, typename _Compare = std::less<_Key>, typename _Alloc = std::allocator<std::pair<const _Key, _Tp> >> std::pair<const_iterator, const_iterator> std::map< _Key, _Tp, _Compare, _Alloc >::equal_range (const key_type & __x) const [inline]

Finds a subsequence matching given key.

Parameters

__x	Key of (key, value) pairs to be located.

Returns

Pair of read-only (constant) iterators that possibly points to the subsequence matching given key.

This function is equivalent to

```
std::make_pair(c.lower_bound(val),
               c.upper_bound(val))
```

(but is faster than making the calls separately).

This function probably only makes sense for multimaps.

Definition at line 1381 of file stl_map.h.

4.698.3.19 template<typename _Key, typename _Tp, typename _Compare = std::less<_Key>, typename _Alloc = std::allocator<std::pair<const _Key, _Tp> >> template<typename _Kt > auto std::map< _Key, _Tp, _Compare, _Alloc >::equal_range (const _Kt & __x) const -> decltype(pair<const_iterator, const_iterator>(_M_t._M_equal_range_tr(__x))) [inline]

Finds a subsequence matching given key.

Parameters

__x	Key of (key, value) pairs to be located.

Returns

Pair of read-only (constant) iterators that possibly points to the subsequence matching given key.

This function is equivalent to

```
std::make_pair(c.lower_bound(val),
               c.upper_bound(val))
```

(but is faster than making the calls separately).

This function probably only makes sense for multimaps.

Definition at line 1387 of file stl_map.h.

4.698.3.20 template<typename _Key, typename _Tp, typename _Compare = std::less<_Key>, typename _Alloc = std::allocator<std::pair<const _Key, _Tp> >> iterator std::map< _Key, _Tp, _Compare, _Alloc >::erase (const_iterator *__position*) [inline]

Erases an element from a map.

Parameters

__position	An iterator pointing to the element to be erased.

Returns

An iterator pointing to the element immediately following *position* prior to the element being erased. If no such element exists, end() is returned.

This function erases an element, pointed to by the given iterator, from a map. Note that this function only erases the element, and that if the element is itself a pointer, the pointed-to memory is not touched in any way. Managing the pointer is the user's responsibility.

Definition at line 1031 of file stl_map.h.

4.698.3.21 template<typename _Key, typename _Tp, typename _Compare = std::less<_Key>, typename _Alloc = std::allocator<std::pair<const _Key, _Tp> >> _GLIBCXX_ABI_TAG_CXX11 iterator std::map< _Key, _Tp, _Compare, _Alloc >::erase (iterator *__position*) [inline]

Erases an element from a map.

Parameters

__position	An iterator pointing to the element to be erased.

Returns

An iterator pointing to the element immediately following *position* prior to the element being erased. If no such element exists, end() is returned.

This function erases an element, pointed to by the given iterator, from a map. Note that this function only erases the element, and that if the element is itself a pointer, the pointed-to memory is not touched in any way. Managing the pointer is the user's responsibility.

Definition at line 1037 of file stl_map.h.

4.698.3.22 template<typename _Key, typename _Tp, typename _Compare = std::less<_Key>, typename _Alloc = std::allocator<std::pair<const _Key, _Tp> >> size_type std::map< _Key, _Tp, _Compare, _Alloc >::erase (const key_type & *__x*) [inline]

Erases elements according to the provided key.

Parameters

__x	Key of element to be erased.

Returns

The number of elements erased.

This function erases all the elements located by the given key from a map. Note that this function only erases the element, and that if the element is itself a pointer, the pointed-to memory is not touched in any way. Managing the pointer is the user's responsibility.

Definition at line 1068 of file stl_map.h.

4.698.3.23 template<typename _Key, typename _Tp, typename _Compare = std::less<_Key>, typename _Alloc = std::allocator<std::pair<const _Key, _Tp> >> iterator std::map< _Key, _Tp, _Compare, _Alloc >::erase (const_iterator *__first,* const_iterator *__last*) [inline]

Erases a [first,last) range of elements from a map.

Parameters

__first	Iterator pointing to the start of the range to be erased.
__last	Iterator pointing to the end of the range to be erased.

Returns

The iterator *__last*.

This function erases a sequence of elements from a map. Note that this function only erases the element, and that if the element is itself a pointer, the pointed-to memory is not touched in any way. Managing the pointer is the user's responsibility.

Definition at line 1088 of file stl_map.h.

4.698.3.24 template<typename _Key, typename _Tp, typename _Compare = std::less<_Key>, typename _Alloc = std::allocator<std::pair<const _Key, _Tp> >> iterator std::map< _Key, _Tp, _Compare, _Alloc >::find (const key_type & __x) [inline]

Tries to locate an element in a map.

Parameters

__x	Key of (key, value) pair to be located.

Returns

Iterator pointing to sought-after element, or end() if not found.

This function takes a key and tries to locate the element with which the key matches. If successful the function returns an iterator pointing to the sought after pair. If unsuccessful it returns the past-the-end (`end()`) iterator.

Definition at line 1169 of file stl_map.h.

4.698.3.25 template<typename _Key, typename _Tp, typename _Compare = std::less<_Key>, typename _Alloc = std::allocator<std::pair<const _Key, _Tp> >> template<typename _Kt > auto std::map< _Key, _Tp, _Compare, _Alloc >::find (const _Kt & __x) -> decltype(_M_t._M_find_tr(__x)) [inline]

Tries to locate an element in a map.

Parameters

__x	Key of (key, value) pair to be located.

Returns

Iterator pointing to sought-after element, or end() if not found.

This function takes a key and tries to locate the element with which the key matches. If successful the function returns an iterator pointing to the sought after pair. If unsuccessful it returns the past-the-end (`end()`) iterator.

Definition at line 1175 of file stl_map.h.

4.698.3.26 template<typename _Key, typename _Tp, typename _Compare = std::less<_Key>, typename _Alloc = std::allocator<std::pair<const _Key, _Tp> >> const_iterator std::map< _Key, _Tp, _Compare, _Alloc >::find (const key_type & __x) const [inline]

Tries to locate an element in a map.

Parameters

__x	Key of (key, value) pair to be located.

Returns

Read-only (constant) iterator pointing to sought-after element, or end() if not found.

This function takes a key and tries to locate the element with which the key matches. If successful the function returns a constant iterator pointing to the sought after pair. If unsuccessful it returns the past-the-end (`end()`) iterator.

Definition at line 1194 of file stl_map.h.

4.698.3.27 template<typename _Key, typename _Tp, typename _Compare = std::less<_Key>, typename _Alloc = std::allocator<std::pair<const _Key, _Tp> >> template<typename _Kt > auto std::map< _Key, _Tp, _Compare, _Alloc >::find (const _Kt & __x) const -> decltype(_M_t._M_find_tr(__x)) [inline]

Tries to locate an element in a map.

Parameters

__x	Key of (key, value) pair to be located.

Returns

Read-only (constant) iterator pointing to sought-after element, or end() if not found.

This function takes a key and tries to locate the element with which the key matches. If successful the function returns a constant iterator pointing to the sought after pair. If unsuccessful it returns the past-the-end (`end()`) iterator.

Definition at line 1200 of file stl_map.h.

4.698.3.28 template<typename _Key, typename _Tp, typename _Compare = std::less<_Key>, typename _Alloc = std::allocator<std::pair<const _Key, _Tp> >> allocator_type std::map< _Key, _Tp, _Compare, _Alloc >::get_allocator ( ) const [inline], [noexcept]

Get a copy of the memory allocation object.

Definition at line 346 of file stl_map.h.

4.698.3.29 template<typename _Key, typename _Tp, typename _Compare = std::less<_Key>, typename _Alloc = std::allocator<std::pair<const _Key, _Tp> >> std::pair<iterator, bool> std::map< _Key, _Tp, _Compare, _Alloc >::insert (const value_type & __x) [inline]

Attempts to insert a std::pair into the map.

Parameters

__x	Pair to be inserted (see std::make_pair for easy creation of pairs).

Returns

A pair, of which the first element is an iterator that points to the possibly inserted pair, and the second is a bool that is true if the pair was actually inserted.

This function attempts to insert a (key, value) pair into the map. A map relies on unique keys and thus a pair is only inserted if its first element (the key) is not already present in the map.

Insertion requires logarithmic time.

Definition at line 803 of file stl_map.h.

Referenced by std::map< _Key, _Tp, _Compare, _Alloc >::insert(), and std::map< _Key, _Tp, _Compare, _Alloc >::operator[]().

4.698.3.30 template<typename _Key, typename _Tp, typename _Compare = std::less<_Key>, typename _Alloc = std::allocator<std::pair<const _Key, _Tp> >> std::pair<iterator, bool> std::map< _Key, _Tp, _Compare, _Alloc >::insert (value_type && __x) [inline]

Attempts to insert a std::pair into the map.

Parameters

__x	Pair to be inserted (see std::make_pair for easy creation of pairs).

Returns

A pair, of which the first element is an iterator that points to the possibly inserted pair, and the second is a bool that is true if the pair was actually inserted.

This function attempts to insert a (key, value) pair into the map. A map relies on unique keys and thus a pair is only inserted if its first element (the key) is not already present in the map.

Insertion requires logarithmic time.

Definition at line 810 of file stl_map.h.

References std::move().

4.698.3.31 template<typename _Key, typename _Tp, typename _Compare = std::less<_Key>, typename _Alloc = std::allocator<std::pair<const _Key, _Tp> >> template<typename _Pair > __enable_if_t<is_constructible<value_type, _Pair>::value, pair<iterator, bool> > std::map< _Key, _Tp, _Compare, _Alloc >::insert (_Pair && __x) [inline]

Attempts to insert a std::pair into the map.

Parameters

__x	Pair to be inserted (see std::make_pair for easy creation of pairs).

Returns

A pair, of which the first element is an iterator that points to the possibly inserted pair, and the second is a bool that is true if the pair was actually inserted.

This function attempts to insert a (key, value) pair into the map. A map relies on unique keys and thus a pair is only inserted if its first element (the key) is not already present in the map.

Insertion requires logarithmic time.

Definition at line 816 of file stl_map.h.

4.698.3.32 template<typename _Key, typename _Tp, typename _Compare = std::less<_Key>, typename _Alloc = std::allocator<std::pair<const _Key, _Tp> >> void std::map< _Key, _Tp, _Compare, _Alloc >::insert (std::initializer_list< value_type > __list) [inline]

Attempts to insert a list of std::pairs into the map.

Parameters

__list	A std::initializer_list<value_type> of pairs to be inserted.

Complexity similar to that of the range constructor.

Definition at line 830 of file stl_map.h.

References std::map< _Key, _Tp, _Compare, _Alloc >::insert().

4.698.3.33 template<typename _Key, typename _Tp, typename _Compare = std::less<_Key>, typename _Alloc = std::allocator<std::pair<const _Key, _Tp> >> iterator std::map< _Key, _Tp, _Compare, _Alloc >::insert (const_iterator *__position*, const value_type & *__x*) [inline]

Attempts to insert a std::pair into the map.

Parameters

__position	An iterator that serves as a hint as to where the pair should be inserted.
__x	Pair to be inserted (see std::make_pair for easy creation of pairs).

Returns

An iterator that points to the element with key of *__x* (may or may not be the pair passed in).

This function is not concerned about whether the insertion took place, and thus does not return a boolean like the single-argument insert() does. Note that the first parameter is only a hint and can potentially improve the performance of the insertion process. A bad hint would cause no gains in efficiency.

See https://gcc.gnu.org/onlinedocs/libstdc++/manual/associative.html#containers.associative.insert_hints for more on *hinting*.

Insertion requires logarithmic time (if the hint is not taken).

Definition at line 860 of file stl_map.h.

4.698.3.34 template<typename _Key, typename _Tp, typename _Compare = std::less<_Key>, typename _Alloc = std::allocator<std::pair<const _Key, _Tp> >> iterator std::map< _Key, _Tp, _Compare, _Alloc >::insert (const_iterator *__position*, value_type && *__x*) [inline]

Attempts to insert a std::pair into the map.

Parameters

__position	An iterator that serves as a hint as to where the pair should be inserted.
__x	Pair to be inserted (see std::make_pair for easy creation of pairs).

Returns

An iterator that points to the element with key of *__x* (may or may not be the pair passed in).

This function is not concerned about whether the insertion took place, and thus does not return a boolean like the single-argument insert() does. Note that the first parameter is only a hint and can potentially improve the performance of the insertion process. A bad hint would cause no gains in efficiency.

See https://gcc.gnu.org/onlinedocs/libstdc++/manual/associative.html#containers.associative.insert_hints for more on *hinting*.

Insertion requires logarithmic time (if the hint is not taken).

Definition at line 870 of file stl_map.h.

References std::move().

4.698.3.35 template<typename _Key, typename _Tp, typename _Compare = std::less<_Key>, typename _Alloc = std::allocator<std::pair<const _Key, _Tp> >> template<typename _Pair > __enable_if_t<is_constructible<value_type, _Pair>::value, iterator> std::map< _Key, _Tp, _Compare, _Alloc >::insert (const_iterator *__position,* _Pair && *__x*) [inline]

Attempts to insert a std::pair into the map.

Parameters

__position	An iterator that serves as a hint as to where the pair should be inserted.
__x	Pair to be inserted (see std::make_pair for easy creation of pairs).

Returns

An iterator that points to the element with key of *__x* (may or may not be the pair passed in).

This function is not concerned about whether the insertion took place, and thus does not return a boolean like the single-argument insert() does. Note that the first parameter is only a hint and can potentially improve the performance of the insertion process. A bad hint would cause no gains in efficiency.

See https://gcc.gnu.org/onlinedocs/libstdc++/manual/associative.html#containers.associative.insert_hints for more on *hinting*.

Insertion requires logarithmic time (if the hint is not taken).

4.698.3.36 template<typename _Key, typename _Tp, typename _Compare = std::less<_Key>, typename _Alloc = std::allocator<std::pair<const _Key, _Tp> >> template<typename _InputIterator > void std::map< _Key, _Tp, _Compare, _Alloc >::insert (_InputIterator *__first*, _InputIterator *__last*) [inline]

Template function that attempts to insert a range of elements.

Parameters

__first	Iterator pointing to the start of the range to be inserted.
__last	Iterator pointing to the end of the range.

Complexity similar to that of the range constructor.

Definition at line 893 of file stl_map.h.

4.698.3.37 template<typename _Key, typename _Tp, typename _Compare = std::less<_Key>, typename _Alloc = std::allocator<std::pair<const _Key, _Tp> >> key_compare std::map< _Key, _Tp, _Compare, _Alloc >::key_comp ( ) const [inline]

Returns the key comparison object out of which the map was constructed.

Definition at line 1142 of file stl_map.h.

Referenced by std::map< _Key, _Tp, _Compare, _Alloc >::at(), and std::map< _Key, _Tp, _Compare, _Alloc >::operator[]().

4.698.3.38 template<typename _Key, typename _Tp, typename _Compare = std::less<_Key>, typename _Alloc = std::allocator<std::pair<const _Key, _Tp> >> iterator std::map< _Key, _Tp, _Compare, _Alloc >::lower_bound (const key_type & *__x*) [inline]

Finds the beginning of a subsequence matching given key.

Parameters

__x	Key of (key, value) pair to be located.

Returns

Iterator pointing to first element equal to or greater than key, or end().

This function returns the first element of a subsequence of elements that matches the given key. If unsuccessful it returns an iterator pointing to the first element that has a greater value than given key or end() if no such element exists.

Definition at line 1258 of file stl_map.h.

Referenced by std::map< _Key, _Tp, _Compare, _Alloc >::at(), and std::map< _Key, _Tp, _Compare, _Alloc >::operator[]().

4.698.3.39 template<typename _Key, typename _Tp, typename _Compare = std::less<_Key>, typename _Alloc = std::allocator<std::pair<const _Key, _Tp> >> template<typename _Kt > auto std::map< _Key, _Tp, _Compare, _Alloc >::lower_bound (const _Kt & __x) -> decltype(iterator(_M_t._M_lower_bound_tr(__x))) [inline]

Finds the beginning of a subsequence matching given key.

Parameters

__x	Key of (key, value) pair to be located.

Returns

Iterator pointing to first element equal to or greater than key, or end().

This function returns the first element of a subsequence of elements that matches the given key. If unsuccessful it returns an iterator pointing to the first element that has a greater value than given key or end() if no such element exists.

Definition at line 1264 of file stl_map.h.

4.698.3.40 template<typename _Key, typename _Tp, typename _Compare = std::less<_Key>, typename _Alloc = std::allocator<std::pair<const _Key, _Tp> >> const_iterator std::map< _Key, _Tp, _Compare, _Alloc >::lower_bound (const key_type & __x) const [inline]

Finds the beginning of a subsequence matching given key.

Parameters

__x	Key of (key, value) pair to be located.

Returns

Read-only (constant) iterator pointing to first element equal to or greater than key, or end().

This function returns the first element of a subsequence of elements that matches the given key. If unsuccessful it returns an iterator pointing to the first element that has a greater value than given key or end() if no such element exists.

Definition at line 1283 of file stl_map.h.

4.698.3.41 template<typename _Key, typename _Tp, typename _Compare = std::less<_Key>, typename _Alloc = std::allocator<std::pair<const _Key, _Tp> >> template<typename _Kt > auto std::map< _Key, _Tp, _Compare, _Alloc >::lower_bound (const _Kt & __x) const -> decltype(const_iterator(_M_t._M_lower_bound_tr(__x))) [inline]

Finds the beginning of a subsequence matching given key.

Parameters

__x	Key of (key, value) pair to be located.

Returns

Read-only (constant) iterator pointing to first element equal to or greater than key, or end().

This function returns the first element of a subsequence of elements that matches the given key. If unsuccessful it returns an iterator pointing to the first element that has a greater value than given key or end() if no such element exists.

Definition at line 1289 of file stl_map.h.

4.698.3.42 template<typename _Key, typename _Tp, typename _Compare = std::less<_Key>, typename _Alloc = std::allocator<std::pair<const _Key, _Tp> >> size_type std::map< _Key, _Tp, _Compare, _Alloc >::max_size ( ) const [inline], [noexcept]

Returns the maximum size of the map.

Definition at line 475 of file stl_map.h.

4.698.3.43 template<typename _Key, typename _Tp, typename _Compare = std::less<_Key>, typename _Alloc = std::allocator<std::pair<const _Key, _Tp> >> map& std::map< _Key, _Tp, _Compare, _Alloc >::operator= (const map< _Key, _Tp, _Compare, _Alloc > &) [default]

Map assignment operator.

Whether the allocator is copied depends on the allocator traits.

4.698.3.44 template<typename _Key, typename _Tp, typename _Compare = std::less<_Key>, typename _Alloc = std::allocator<std::pair<const _Key, _Tp> >> map& std::map< _Key, _Tp, _Compare, _Alloc >::operator= (map< _Key, _Tp, _Compare, _Alloc > &&) [default]

Move assignment operator.

4.698.3.45 template<typename _Key, typename _Tp, typename _Compare = std::less<_Key>, typename _Alloc = std::allocator<std::pair<const _Key, _Tp> >> map& std::map< _Key, _Tp, _Compare, _Alloc >::operator= (initializer_list< value_type > __l) [inline]

Map list assignment operator.

Parameters

__l	An initializer_list.

This function fills a map with copies of the elements in the initializer list *__l*.

Note that the assignment completely changes the map and that the resulting map's size is the same as the number of elements assigned.

Definition at line 337 of file stl_map.h.

4.698.3.46 template<typename _Key, typename _Tp, typename _Compare = std::less<_Key>, typename _Alloc = std::allocator<std::pair<const _Key, _Tp> >> mapped_type& std::map< _Key, _Tp, _Compare, _Alloc >::operator[] (const key_type & *__k*) [inline]

Subscript ([]) access to map data.

Parameters

__k	The key for which data should be retrieved.

Returns

A reference to the data of the (key,data) pair.

Allows for easy lookup with the subscript ([]) operator. Returns data associated with the key specified in subscript. If the key does not exist, a pair with that key is created using default values, which is then returned.

Lookup requires logarithmic time.

Definition at line 492 of file stl_map.h.

References std::map< _Key, _Tp, _Compare, _Alloc >::end(), std::map< _Key, _Tp, _Compare, _Alloc >::insert(), std::map< _Key, _Tp, _Compare, _Alloc >::key_comp(), std::map< _Key, _Tp, _Compare, _Alloc >::lower_bound(), and std::piecewise_construct.

4.698.3.47 template<typename _Key, typename _Tp, typename _Compare = std::less<_Key>, typename _Alloc = std::allocator<std::pair<const _Key, _Tp> >> reverse_iterator std::map< _Key, _Tp, _Compare, _Alloc >::rbegin ( ) [inline], [noexcept]

Returns a read/write reverse iterator that points to the last pair in the map. Iteration is done in descending order according to the keys.

Definition at line 392 of file stl_map.h.

4.698.3.48 template<typename _Key, typename _Tp, typename _Compare = std::less<_Key>, typename _Alloc = std::allocator<std::pair<const _Key, _Tp> >> const_reverse_iterator std::map< _Key, _Tp, _Compare, _Alloc >::rbegin ( ) const [inline], [noexcept]

Returns a read-only (constant) reverse iterator that points to the last pair in the map. Iteration is done in descending order according to the keys.

Definition at line 401 of file stl_map.h.

4.698.3.49 template<typename _Key, typename _Tp, typename _Compare = std::less<_Key>, typename _Alloc = std::allocator<std::pair<const _Key, _Tp> >> reverse_iterator std::map< _Key, _Tp, _Compare, _Alloc >::rend ( ) [inline], [noexcept]

Returns a read/write reverse iterator that points to one before the first pair in the map. Iteration is done in descending order according to the keys.

Definition at line 410 of file stl_map.h.

4.698.3.50 template<typename _Key, typename _Tp, typename _Compare = std::less<_Key>, typename _Alloc = std::allocator<std::pair<const _Key, _Tp> >> const_reverse_iterator std::map< _Key, _Tp, _Compare, _Alloc >::rend ( ) const [inline], [noexcept]

Returns a read-only (constant) reverse iterator that points to one before the first pair in the map. Iteration is done in descending order according to the keys.

Definition at line 419 of file stl_map.h.

4.698.3.51 template<typename _Key, typename _Tp, typename _Compare = std::less<_Key>, typename _Alloc = std::allocator<std::pair<const _Key, _Tp> >> size_type std::map< _Key, _Tp, _Compare, _Alloc >::size ( ) const [inline], [noexcept]

Returns the size of the map.

Definition at line 470 of file stl_map.h.

4.698.3.52 template<typename _Key, typename _Tp, typename _Compare = std::less<_Key>, typename _Alloc = std::allocator<std::pair<const _Key, _Tp> >> void std::map< _Key, _Tp, _Compare, _Alloc >::swap (map< _Key, _Tp, _Compare, _Alloc > & __x) [inline], [noexcept]

Swaps data with another map.

Parameters

__x	A map of the same element and allocator types.

This exchanges the elements between two maps in constant time. (It is only swapping a pointer, an integer, and an instance of the Compare type (which itself is often stateless and empty), so it should be quite fast.) Note that the global std::swap() function is specialized such that std::swap(m1,m2) will feed to this function.

Whether the allocators are swapped depends on the allocator traits.

Definition at line 1122 of file stl_map.h.

4.698.3.53 template<typename _Key, typename _Tp, typename _Compare = std::less<_Key>, typename _Alloc = std::allocator<std::pair<const _Key, _Tp> >> iterator std::map< _Key, _Tp, _Compare, _Alloc >::upper_bound (const key_type & __x) [inline]

Finds the end of a subsequence matching given key.

Parameters

__x	Key of (key, value) pair to be located.

Returns

Iterator pointing to the first element greater than key, or end().

Definition at line 1303 of file stl_map.h.

4.698.3.54 template<typename _Key, typename _Tp, typename _Compare = std::less<_Key>, typename _Alloc = std::allocator<std::pair<const _Key, _Tp> >> template<typename _Kt > auto std::map< _Key, _Tp, _Compare, _Alloc >::upper_bound (const _Kt & __x) -> decltype(iterator(_M_t._M_upper_bound_tr(__x))) [inline]

Finds the end of a subsequence matching given key.

Parameters

__x	Key of (key, value) pair to be located.

Returns

Iterator pointing to the first element greater than key, or end().

Definition at line 1309 of file stl_map.h.

4.698.3.55 template<typename _Key, typename _Tp, typename _Compare = std::less<_Key>, typename _Alloc = std::allocator<std::pair<const _Key, _Tp> >> const_iterator std::map< _Key, _Tp, _Compare, _Alloc >::upper_bound (const key_type & __x) const [inline]

Finds the end of a subsequence matching given key.

Parameters

__x	Key of (key, value) pair to be located.

Returns

Read-only (constant) iterator pointing to first iterator greater than key, or end().

Definition at line 1323 of file stl_map.h.

4.698.3.56 template<typename _Key, typename _Tp, typename _Compare = std::less<_Key>, typename _Alloc = std::allocator<std::pair<const _Key, _Tp> >> template<typename _Kt > auto std::map< _Key, _Tp, _Compare, _Alloc >::upper_bound (const _Kt & __x) const -> decltype(const_iterator(_M_t._M_upper_bound_tr(__x))) [inline]

Finds the end of a subsequence matching given key.

Parameters

__x	Key of (key, value) pair to be located.

Returns

Read-only (constant) iterator pointing to first iterator greater than key, or end().

Definition at line 1329 of file stl_map.h.

4.698.3.57 template<typename _Key, typename _Tp, typename _Compare = std::less<_Key>, typename _Alloc = std::allocator<std::pair<const _Key, _Tp> >> value_compare std::map< _Key, _Tp, _Compare, _Alloc >::value_comp ( ) const [inline]

Returns a value comparison object, built from the key comparison object out of which the map was constructed.

Definition at line 1150 of file stl_map.h.

4.699.1 Detailed Description

template<class _Tp>class std::mask_array< _Tp >

Reference to selected subset of an array.

A mask_array is a reference to the actual elements of an array specified by a bitmask in the form of an array of bool. The way to get a mask_array is to call operator[](valarray<bool>) on a valarray. The returned mask_array then permits carrying operations out on the referenced subset of elements in the original valarray.

For example, if a mask_array is obtained using the array (false, true, false, true) as an argument, the mask array has two elements referring to array[1] and array[3] in the underlying array.

Parameters

Tp	Element type.

Definition at line 94 of file valarray.

The documentation for this class was generated from the following files:

- valarray
- mask_array.h

4.701.1 Detailed Description

template<typename, typename>class std::match_results< typename, typename >

The results of a match or search operation.

A collection of character sequences representing the result of a regular expression match. Storage for the collection is allocated and freed as necessary by the member functions of class template match_results.

This class satisfies the Sequence requirements, with the exception that only the operations defined for a const-qualified Sequence are supported.

The sub_match object stored at index 0 represents sub-expression 0, i.e. the whole match. In this case the sub_match member matched is always true. The sub_match object stored at index n denotes what matched the marked sub-expression n within the matched expression. If the sub-expression n participated in a regular expression match then the sub_match member matched evaluates to true, and members first and second denote the range of characters [first, second) which formed that match. Otherwise matched is false, and members first and second point to the end of the sequence that was searched.

Definition at line 39 of file regex.h.

4.701.2 Constructor & Destructor Documentation

4.701.2.1 template<typename , typename > std::match_results< typename, typename >::match_results ( ) [inline]

Constructs a default match_results container.

Postcondition

size() returns 0 and str() returns an empty string.

Definition at line 1728 of file regex.h.

4.701.2.2 template<typename , typename > std::match_results< typename, typename >::match_results (const _Alloc & *__a*) [inline], [explicit], [noexcept]

Constructs a default match_results container.

Postcondition

size() returns 0 and str() returns an empty string.

Definition at line 1735 of file regex.h.

4.701.2.3 template<typename , typename > std::match_results< typename, typename >::match_results (const match_results< typename, typename > &) [default]

Copy constructs a match_results.

4.701.2.4 template<typename , typename > std::match_results< typename, typename >::match_results (match_results< typename, typename > &&) [default], [noexcept]

Move constructs a match_results.

4.701.2.5 template<typename , typename > std::match_results< typename, typename >::~match_results ( ) [default]

Destroys a match_results object.

4.701.3 Member Function Documentation

4.701.3.1 template<typename , typename > const_iterator std::match_results< typename, typename >::begin ( ) const [inline], [noexcept]

Gets an iterator to the start of the sub_match collection.

Definition at line 1908 of file regex.h.

Referenced by std::match_results< _Bi_iter >::cbegin(), and std::operator==().

4.701.3.2 template<typename , typename > const_iterator std::match_results< typename, typename >::cbegin ( ) const [inline], [noexcept]

Gets an iterator to the start of the sub_match collection.

Definition at line 1915 of file regex.h.

4.701.3.3 template<typename , typename > const_iterator std::match_results< typename, typename >::cend ( ) const [inline], [noexcept]

Gets an iterator to one-past-the-end of the collection.

Definition at line 1929 of file regex.h.

4.701.3.4 template<typename , typename > bool std::match_results< typename, typename >::empty ( ) const [inline], [noexcept]

Indicates if the match_results contains no results.

Return values

true	The match_results object is empty.
false	The match_results object is not empty.

Definition at line 1804 of file regex.h.

Referenced by std::match_results< _Bi_iter >::end(), std::operator==(), std::match_results< _Bi_iter >::prefix(), and std::match_results< _Bi_iter >::suffix().

4.701.3.5 template<typename , typename > const_iterator std::match_results< typename, typename >::end ( ) const [inline], [noexcept]

Gets an iterator to one-past-the-end of the collection.

Definition at line 1922 of file regex.h.

Referenced by std::match_results< _Bi_iter >::cend(), and std::operator==().

4.701.3.6 template<typename , typename > template<typename _Out_iter > _Out_iter std::match_results< typename, typename >::format (_Out_iter *__out,* const char_type * *__fmt_first,* const char_type * *__fmt_last,* match_flag_type *__flags* = regex_constants::format_default) const

Precondition

ready() == true

Referenced by std::match_results< _Bi_iter >::format().

4.701.3.7 template<typename , typename > template<typename _Out_iter , typename _St , typename _Sa > _Out_iter std::match_results< typename, typename >::format (_Out_iter *__out,* const basic_string< char_type, _St, _Sa > & *__fmt,* match_flag_type *__flags* = regex_constants::format_default) const [inline]

Precondition

ready() == true

Definition at line 1958 of file regex.h.

4.701.3.8 template<typename , typename > template<typename _St , typename _Sa > basic_string<char_type, _St, _Sa> std::match_results< typename, typename >::format (const basic_string< char_type, _St, _Sa > & *__fmt,* match_flag_type *__flags* = regex_constants::format_default) const [inline]

Precondition

ready() == true

Definition at line 1970 of file regex.h.

4.701.3.9 template<typename , typename > string_type std::match_results< typename, typename >::format (const char_type * *__fmt,* match_flag_type *__flags* = regex_constants::format_default) const [inline]

Precondition

ready() == true

Definition at line 1982 of file regex.h.

4.701.3.10 template<typename , typename > allocator_type std::match_results< typename, typename >::get_allocator ( ) const [inline], [noexcept]

Gets a copy of the allocator.

Definition at line 2004 of file regex.h.

4.701.3.11 template<typename , typename > difference_type std::match_results< typename, typename >::length (size_type *__sub* = 0) const [inline]

Gets the length of the indicated submatch.

Parameters

__sub	indicates the submatch.

Precondition

ready() == true

This function returns the length of the indicated submatch, or the length of the entire match if __sub is zero (the default).

Definition at line 1823 of file regex.h.

4.701.3.12 template<typename , typename > size_type std::match_results< typename, typename >::max_size ( ) const [inline], [noexcept]

Gets the number of matches and submatches.

The number of matches for a given regular expression will be either 0 if there was no match or mark_count() + 1 if a match was successful. Some matches may be empty.

Returns

the number of matches found.

Definition at line 1795 of file regex.h.

4.701.3.13 template<typename , typename > match_results& std::match_results< typename, typename >::operator= (const match_results< typename, typename > &) [default]

Assigns rhs to *this.

4.701.3.14 template<typename , typename > match_results& std::match_results< typename, typename >::operator= (match_results< typename, typename > &&) [default]

Move-assigns rhs to *this.

4.701.3.15 template<typename , typename > const_reference std::match_results< typename, typename >::operator[] (size_type *__sub*) const [inline]

Gets a sub_match reference for the match or submatch.

Parameters

__sub	indicates the submatch.

Precondition

ready() == true

This function gets a reference to the indicated submatch, or the entire match if __sub is zero.

If __sub >= size() then this function returns a sub_match with a special value indicating no submatch.

Definition at line 1866 of file regex.h.

4.701.3.16 template<typename , typename > difference_type std::match_results< typename, typename >::position (size_type *__sub* = 0) const [inline]

Gets the offset of the beginning of the indicated submatch.

Parameters

__sub	indicates the submatch.

Precondition

ready() == true

This function returns the offset from the beginning of the target sequence to the beginning of the submatch, unless the value of __sub is zero (the default), in which case this function returns the offset from the beginning of the target sequence to the beginning of the match.

Definition at line 1838 of file regex.h.

4.701.3.17 template<typename , typename > const_reference std::match_results< typename, typename >::prefix ( ) const [inline]

Gets a sub_match representing the match prefix.

Precondition

ready() == true

This function gets a reference to a sub_match object representing the part of the target range between the start of the target range and the start of the match.

Definition at line 1883 of file regex.h.

Referenced by std::operator==().

4.701.3.18 template<typename , typename > bool std::match_results< typename, typename >::ready ( ) const [inline], [noexcept]

Indicates if the match_results is ready.

Return values

true	The object has a fully-established result state.
false	The object is not ready.

Definition at line 1774 of file regex.h.

Referenced by std::operator==(), std::match_results< _Bi_iter >::operator[](), std::match_results< _Bi_iter >::prefix(), and std::match_results< _Bi_iter >::suffix().

4.701.3.19 template<typename , typename > size_type std::match_results< typename, typename >::size ( ) const [inline], [noexcept]

Gets the number of matches and submatches.

The number of matches for a given regular expression will be either 0 if there was no match or mark_count() + 1 if a match was successful. Some matches may be empty.

Returns

the number of matches found.

Definition at line 1791 of file regex.h.

Referenced by std::match_results< _Bi_iter >::empty(), std::operator==(), and std::match_results< _Bi_iter >::operator[]().

4.701.3.20 template<typename , typename > string_type std::match_results< typename, typename >::str (size_type __sub = 0) const [inline]

Gets the match or submatch converted to a string type.

Parameters

__sub	indicates the submatch.

Precondition

ready() == true

This function gets the submatch (or match, if __sub is zero) extracted from the target range and converted to the associated string type.

Definition at line 1851 of file regex.h.

4.701.3.21 template<typename , typename > const_reference std::match_results< typename, typename >::suffix ( ) const [inline]

Gets a sub_match representing the match suffix.

Precondition

ready() == true

This function gets a reference to a sub_match object representing the part of the target range between the end of the match and the end of the target range.

Definition at line 1898 of file regex.h.

Referenced by std::operator==().

4.701.3.22 template<typename , typename > void std::match_results< typename, typename >::swap (match_results< typename, typename > & *__that*) [inline], [noexcept]

Swaps the contents of two match_results.

Definition at line 2018 of file regex.h.

Referenced by std::match_results< _Bi_iter >::swap().

4.708.1 Detailed Description

template<typename _UIntType, size_t __w, size_t __n, size_t __m, size_t __r, _UIntType __a, size_t __u, _UIntType __d, size_t __s, _UIntType __b, size_t __t, _UIntType __c, size_t __l, _UIntType __f>class std::mersenne_twister_engine< _UIntType, __w, __n, __m, __r, __a, __u, __d, __s, __b, __t, __c, __l, __f >

A generalized feedback shift register discrete random number generator.

This algorithm avoids multiplication and division and is designed to be friendly to a pipelined architecture. If the parameters are chosen correctly, this generator will produce numbers with a very long period and fairly good apparent entropy, although still not cryptographically strong.

The best way to use this generator is with the predefined mt19937 class.

This algorithm was originally invented by Makoto Matsumoto and Takuji Nishimura.

Template Parameters

__w	Word size, the number of bits in each element of the state vector.
__n	The degree of recursion.
__m	The period parameter.
__r	The separation point bit index.
__a	The last row of the twist matrix.
__u	The first right-shift tempering matrix parameter.
__d	The first right-shift tempering matrix mask.
__s	The first left-shift tempering matrix parameter.
__b	The first left-shift tempering matrix mask.

__t	The second left-shift tempering matrix parameter.
__c	The second left-shift tempering matrix mask.
__l	The second right-shift tempering matrix parameter.
__f	Initialization multiplier.

Definition at line 463 of file random.h.

The type of the generated random value.

Definition at line 498 of file random.h.

4.708.3 Constructor & Destructor Documentation

4.708.3.1 template<typename _UIntType, size_t __w, size_t __n, size_t __m, size_t __r, _UIntType __a, size_t __u, _UIntType __d, size_t __s, _UIntType __b, size_t __t, _UIntType __c, size_t __l, _UIntType __f> template<typename _Sseq , typename = _If_seed_seq<_Sseq>> std::mersenne_twister_engine< _UIntType, __w, __n, __m, __r, __a, __u, __d, __s, __b, __t, __c, __l, __f >::mersenne_twister_engine (_Sseq & *__q*) [inline], [explicit]

Constructs a mersenne_twister_engine random number generator engine seeded from the seed sequence __q.

Parameters

__q	the seed sequence.

Definition at line 532 of file random.h.

4.708.4 Member Function Documentation

4.708.4.1 template<typename _UIntType , size_t __w, size_t __n, size_t __m, size_t __r, _UIntType __a, size_t __u, _UIntType __d, size_t __s, _UIntType __b, size_t __t, _UIntType __c, size_t __l, _UIntType __f> void std::mersenne_twister_engine< _UIntType, __w, __n, __m, __r, __a, __u, __d, __s, __b, __t, __c, __l, __f >::discard (unsigned long long *__z*)

Discard a sequence of random numbers.

Definition at line 432 of file bits/random.tcc.

4.708.4.2 template<typename _UIntType, size_t __w, size_t __n, size_t __m, size_t __r, _UIntType __a, size_t __u, _UIntType __d, size_t __s, _UIntType __b, size_t __t, _UIntType __c, size_t __l, _UIntType __f> static constexpr result_type std::mersenne_twister_engine< _UIntType, __w, __n, __m, __r, __a, __u, __d, __s, __b, __t, __c, __l, __f >::max ( ) [inline], [static]

Gets the largest possible value in the output range.

Definition at line 553 of file random.h.

4.708.4.3 template<typename _UIntType, size_t __w, size_t __n, size_t __m, size_t __r, _UIntType __a, size_t __u, _UIntType __d, size_t __s, _UIntType __b, size_t __t, _UIntType __c, size_t __l, _UIntType __f> static constexpr result_type std::mersenne_twister_engine< _UIntType, __w, __n, __m, __r, __a, __u, __d, __s, __b, __t, __c, __l, __f >::min ( ) [inline], [static]

Gets the smallest possible value in the output range.

Definition at line 546 of file random.h.

4.708.5 Friends And Related Function Documentation

4.708.5.1 template<typename _UIntType, size_t __w, size_t __n, size_t __m, size_t __r, _UIntType __a, size_t __u, _UIntType __d, size_t __s, _UIntType __b, size_t __t, _UIntType __c, size_t __l, _UIntType __f> template<typename _UIntType1 , size_t __w1, size_t __n1, size_t __m1, size_t __r1, _UIntType1 __a1, size_t __u1, _UIntType1 __d1, size_t __s1, _UIntType1 __b1, size_t __t1, _UIntType1 __c1, size_t __l1, _UIntType1 __f1, typename _CharT , typename _Traits > std::basic_ostream<_CharT, _Traits>& operator<< (std::basic_ostream< _CharT, _Traits > & *__os,* const std::mersenne_twister_engine< _UIntType1, __w1, __n1, __m1, __r1, __a1, __u1, __d1, __s1, __b1, __t1, __c1, __l1, __f1 > & *__x*) [friend]

Inserts the current state of a % mersenne_twister_engine random number generator engine __x into the output stream __os.

Parameters

__os	An output stream.
__x	A % mersenne_twister_engine random number generator engine.

Returns

The output stream with the state of __x inserted or in an error state.

4.708.5.2 template<typename _UIntType, size_t __w, size_t __n, size_t __m, size_t __r, _UIntType __a, size_t __u, _UIntType __d, size_t __s, _UIntType __b, size_t __t, _UIntType __c, size_t __l, _UIntType __f> bool operator== (const mersenne_twister_engine< _UIntType, __w, __n, __m, __r, __a, __u, __d, __s, __b, __t, __c, __l, __f > & *__lhs,* const mersenne_twister_engine< _UIntType, __w, __n, __m, __r, __a, __u, __d, __s, __b, __t, __c, __l, __f > & *__rhs*) [friend]

Compares two % mersenne_twister_engine random number generator objects of the same type for equality.

Parameters

__lhs	A % mersenne_twister_engine random number generator object.
__rhs	Another % mersenne_twister_engine random number generator object.

Returns

true if the infinite sequences of generated values would be equal, false otherwise.

Definition at line 578 of file random.h.

4.708.5.3 template<typename _UIntType, size_t __w, size_t __n, size_t __m, size_t __r, _UIntType __a, size_t __u, _UIntType __d, size_t __s, _UIntType __b, size_t __t, _UIntType __c, size_t __l, _UIntType __f> template<typename _UIntType1 , size_t __w1, size_t __n1, size_t __m1, size_t __r1, _UIntType1 __a1, size_t __u1, _UIntType1 __d1, size_t __s1, _UIntType1 __b1, size_t __t1, _UIntType1 __c1, size_t __l1, _UIntType1 __f1, typename _CharT , typename _Traits > std::basic_istream<_CharT, _Traits>& operator>> (std::basic_istream< _CharT, _Traits > & *__is,* std::mersenne_twister_engine< _UIntType1, __w1, __n1, __m1, __r1, __a1, __u1, __d1, __s1, __b1, __t1, __c1, __l1, __f1 > & *__x*) [friend]

Extracts the current state of a % mersenne_twister_engine random number generator engine `__x` from the input stream `__is`.

Parameters

__is	An input stream.
__x	A % mersenne_twister_engine random number generator engine.

Returns

The input stream with the state of __x extracted or in an error state.

4.709.1 Detailed Description

template<typename _CharT>class std::messages< _CharT >

Primary class template messages.

This facet encapsulates the code to retrieve messages from message catalogs. The only thing defined by the standard for this facet is the interface. All underlying functionality is implementation-defined.

This library currently implements 3 versions of the message facet. The first version (gnu) is a wrapper around gettext, provided by libintl. The second version (ieee) is a wrapper around catgets. The final version (default) does no actual translation. These implementations are only provided for char and wchar_t instantiations.

The messages template uses protected virtual functions to provide the actual results. The public accessors forward the call to the virtual functions. These virtual functions are hooks for developers to implement the behavior they require from the messages facet.

Definition at line 1799 of file locale_facets_nonio.h.

4.709.2 Member Typedef Documentation

4.709.2.1 template<typename _CharT > typedef _CharT std::messages< _CharT >::char_type

Public typedefs.

Definition at line 1805 of file locale_facets_nonio.h.

Public typedefs.

Definition at line 1806 of file locale_facets_nonio.h.

4.709.3 Constructor & Destructor Documentation

4.709.3.1 template<typename _CharT > std::messages< _CharT >::messages (size_t __refs = 0) [explicit]

Constructor performs initialization.

This is the constructor provided by the standard.

Parameters

__refs	Passed to the base facet class.

Definition at line 42 of file messages_members.h.

4.709.3.2 template<typename _CharT > std::messages< _CharT >::messages (__c_locale __cloc, const char * __s, size_t __refs = 0) [explicit]

Internal constructor. Not for general use.

This is a constructor for use by the library itself to set up new locales.

Parameters

__cloc	The C locale.
__s	The name of a locale.
__refs	Refcount to pass to the base class.

Definition at line 47 of file messages_members.h.

4.709.3.3 template<typename _CharT > std::messages< _CharT >::~messages ( ) [protected], [virtual]

Destructor.

Definition at line 59 of file messages_members.h.

4.718.4 Member Function Documentation

4.718.4.1 template<typename _CharT , typename _InIter > _InIter std::money_get< _CharT, _InIter >::do_get (iter_type __s, iter_type __end, bool __intl, ios_base & __io, ios_base::iostate & __err, long double & __units) const [protected],[virtual]

Read and parse a monetary value.

This function reads and parses characters representing a monetary value. This function is a hook for derived classes to change the value returned.

See Also

get() for details.

Definition at line 371 of file locale_facets_nonio.tcc.

References std::basic_string< _CharT, _Traits, _Alloc >::c_str().

Referenced by std::money_get< _CharT, _InIter >::get().

4.718.4.2 template<typename _CharT , typename _InIter > _InIter std::money_get< _CharT, _InIter >::do_get (iter_type __s, iter_type __end, bool __intl, ios_base & __io, ios_base::iostate & __err, string_type & __digits) const [protected],[virtual]

Read and parse a monetary value.

This function reads and parses characters representing a monetary value. This function is a hook for derived classes to change the value returned.

See Also

get() for details.

Definition at line 384 of file locale_facets_nonio.tcc.

References std::ios_base::_M_getloc(), std::basic_string< _CharT, _Traits, _Alloc >::resize(), and std::__ctype_abstract_base< _CharT >::widen().

4.718.4.3 template<typename _CharT , typename _InIter > iter_type std::money_get< _CharT, _InIter >::get (iter_type __s, iter_type __end, bool __intl, ios_base & __io, ios_base::iostate & __err, long double & __units) const [inline]

Read and parse a monetary value.

This function reads characters from *__s*, interprets them as a monetary value according to moneypunct and ctype facets retrieved from io.getloc(), and returns the result in *units* as an integral value moneypunct::frac_digits() * the actual amount. For example, the string $10.01 in a US locale would store 1001 in *units*.

Any characters not part of a valid money amount are not consumed.

If a money value cannot be parsed from the input stream, sets err=(err|io.failbit). If the stream is consumed before finishing parsing, sets err=(err|io.failbit|io.eofbit). *units* is unchanged if parsing fails.

This function works by returning the result of do_get().

Parameters

__s	Start of characters to parse.
__end	End of characters to parse.
__intl	Parameter to use_facet<moneypunct<CharT,intl> >.
__io	Source of facets and io state.
__err	Error field to set if parsing fails.
__units	Place to store result of parsing.

Returns

Iterator referencing first character beyond valid money amount.

Definition at line 1520 of file locale_facets_nonio.h.

References std::money_get< _CharT, _InIter >::do_get().

4.718.4.4 template<typename _CharT , typename _InIter > iter_type std::money_get< _CharT, _InIter >::get (iter_type __s, iter_type __end, bool __intl, ios_base & __io, ios_base::iostate & __err, string_type & __digits) const [inline]

Read and parse a monetary value.

This function reads characters from *__s*, interprets them as a monetary value according to moneypunct and ctype facets retrieved from io.getloc(), and returns the result in *digits*. For example, the string $10.01 in a US locale would store `1001` in *digits*.

Any characters not part of a valid money amount are not consumed.

If a money value cannot be parsed from the input stream, sets err=(err|io.failbit). If the stream is consumed before finishing parsing, sets err=(err|io.failbit|io.eofbit).

This function works by returning the result of do_get().

Parameters

__s	Start of characters to parse.
__end	End of characters to parse.
__intl	Parameter to use_facet<moneypunct<CharT,intl> >.

__io	Source of facets and io state.
__err	Error field to set if parsing fails.
__digits	Place to store result of parsing.

Returns

Iterator referencing first character beyond valid money amount.

Definition at line 1551 of file locale_facets_nonio.h.

References std::money_get< _CharT, _InIter >::do_get().

4.719.2.3 template<typename _CharT , typename _OutIter > typedef basic_string<_CharT> std::money_put< _CharT, _OutIter >::string_type

Public typedefs.

Definition at line 1628 of file locale_facets_nonio.h.

4.719.3 Constructor & Destructor Documentation

4.719.3.1 template<typename _CharT , typename _OutIter > std::money_put< _CharT, _OutIter >::money_put (size_t *__refs* = 0) [inline], [explicit]

Constructor performs initialization.

This is the constructor provided by the standard.

Parameters

__refs	Passed to the base facet class.

Definition at line 1642 of file locale_facets_nonio.h.

4.719.3.2 template<typename _CharT , typename _OutIter > virtual std::money_put< _CharT, _OutIter >::~money_put ( ) [inline], [protected], [virtual]

Destructor.

Definition at line 1692 of file locale_facets_nonio.h.

4.719.4 Member Function Documentation

4.719.4.1 template<typename _CharT , typename _OutIter > _OutIter std::money_put< _CharT, _OutIter >::do_put (iter_type *__s,* bool *__intl,* ios_base & *__io,* char_type *__fill,* long double *__units*) const [protected], [virtual]

Format and output a monetary value.

This function formats *units* as a monetary value according to moneypunct and ctype facets retrieved from io.getloc(), and writes the resulting characters to *__s*. For example, the value 1001 in a US locale would write `$10.01` to *__s*.

This function is a hook for derived classes to change the value returned.

See Also

put().

Parameters

__s	The stream to write to.

__intl	Parameter to use_facet<moneypunct<CharT,intl> >.
__io	Source of facets and io state.
__fill	char_type to use for padding.
__units	Place to store result of parsing.

Returns

Iterator after writing.

Definition at line 577 of file locale_facets_nonio.tcc.

References std::ios_base::getloc(), and std::__ctype_abstract_base< _CharT >::widen().

Referenced by std::money_put< _CharT, _OutIter >::put().

4.719.4.2 template<typename _CharT , typename _OutIter > _OutIter std::money_put< _CharT, _OutIter >::do_put (iter_type *__s*, bool *__intl*, ios_base & *__io*, char_type *__fill*, const string_type & *__digits*) const [protected], [virtual]

Format and output a monetary value.

This function formats *digits* as a monetary value according to moneypunct and ctype facets retrieved from io.getloc(), and writes the resulting characters to *__s*. For example, the string `1001` in a US locale would write `$10.01` to *__s*.

This function is a hook for derived classes to change the value returned.

See Also

put().

Parameters

__s	The stream to write to.
__intl	Parameter to use_facet<moneypunct<CharT,intl> >.
__io	Source of facets and io state.
__fill	char_type to use for padding.
__digits	Place to store result of parsing.

Returns

Iterator after writing.

Definition at line 615 of file locale_facets_nonio.tcc.

4.719.4.3 template<typename _CharT , typename _OutIter > iter_type std::money_put< _CharT, _OutIter >::put (iter_type *__s*, bool *__intl*, ios_base & *__io*, char_type *__fill*, long double *__units*) const [inline]

Format and output a monetary value.

This function formats *units* as a monetary value according to moneypunct and ctype facets retrieved from io.getloc(), and writes the resulting characters to *__s*. For example, the value 1001 in a US locale would write `$10.01` to *__s*.

This function works by returning the result of do_put().

Parameters

__s	The stream to write to.
__intl	Parameter to use_facet<moneypunct<CharT,intl> >.
__io	Source of facets and io state.
__fill	char_type to use for padding.
__units	Place to store result of parsing.

Returns

Iterator after writing.

Definition at line 1662 of file locale_facets_nonio.h.

References std::money_put< _CharT, _OutIter >::do_put().

4.719.4.4 template<typename _CharT , typename _OutIter > iter_type std::money_put< _CharT, _OutIter >::put (iter_type *__s*, bool *__intl*, ios_base & *__io*, char_type *__fill*, const string_type & *__digits*) const [inline]

Format and output a monetary value.

This function formats *digits* as a monetary value according to moneypunct and ctype facets retrieved from io.getloc(), and writes the resulting characters to *__s*. For example, the string `1001` in a US locale would write `$10.01` to *__s*.

This function works by returning the result of do_put().

Parameters

__s	The stream to write to.
__intl	Parameter to use_facet<moneypunct<CharT,intl> >.
__io	Source of facets and io state.
__fill	char_type to use for padding.
__digits	Place to store result of parsing.

Returns

Iterator after writing.

Definition at line 1685 of file locale_facets_nonio.h.

References std::money_put< _CharT, _OutIter >::do_put().

4.719.5 Member Data Documentation

4.719.5.1 template<typename _CharT , typename _OutIter > locale::id std::money_put< _CharT, _OutIter >::id [static]

Numpunct facet id.

Definition at line 1632 of file locale_facets_nonio.h.

4.720.1 Detailed Description

template<typename _CharT, bool _Intl>class std::moneypunct< _CharT, _Intl >

Primary class template moneypunct.

This facet encapsulates the punctuation, grouping and other formatting features of money amount string representations.

Definition at line 1024 of file locale_facets_nonio.h.

4.720.2 Member Typedef Documentation

4.720.2.1 template<typename _CharT , bool _Intl> typedef _CharT std::moneypunct< _CharT, _Intl >::char_type

Public typedefs.

Definition at line 1030 of file locale_facets_nonio.h.

4.720.2.2 template<typename _CharT , bool _Intl> typedef basic_string<_CharT> std::moneypunct< _CharT, _Intl >::string_type

Public typedefs.

Definition at line 1031 of file locale_facets_nonio.h.

4.720.3 Constructor & Destructor Documentation

4.720.3.1 template<typename _CharT , bool _Intl> std::moneypunct< _CharT, _Intl >::moneypunct (size_t *__refs* = 0) [inline], [explicit]

Constructor performs initialization.

This is the constructor provided by the standard.

Parameters

__refs	Passed to the base facet class.

Definition at line 1053 of file locale_facets_nonio.h.

4.720.3.2 template<typename _CharT , bool _Intl> std::moneypunct< _CharT, _Intl >::moneypunct (__cache_type * *__cache*, size_t *__refs* = 0) [inline], [explicit]

Constructor performs initialization.

This is an internal constructor.

Parameters

__cache	Cache for optimization.
__refs	Passed to the base facet class.

Definition at line 1066 of file locale_facets_nonio.h.

4.720.3.3 template<typename _CharT , bool _Intl> std::moneypunct< _CharT, _Intl >::moneypunct (__c_locale *__cloc*, const char * *__s*, size_t *__refs* = 0) [inline], [explicit]

Internal constructor. Not for general use.

This is a constructor for use by the library itself to set up new locales.

Parameters

__cloc	The C locale.
__s	The name of a locale.
__refs	Passed to the base facet class.

Definition at line 1081 of file locale_facets_nonio.h.

4.720.3.4 template<typename _CharT , bool _Intl> virtual std::moneypunct< _CharT, _Intl >::~moneypunct ( ) [protected], [virtual]

Destructor.

4.720.4 Member Function Documentation

4.720.4.1 template<typename _CharT , bool _Intl> string_type std::moneypunct< _CharT, _Intl >::curr_symbol ( ) const [inline]

Return currency symbol string.

This function returns a string_type to use as a currency symbol. It does so by returning returning moneypunct<char_type>::do_curr_symbol().

Returns

string_type representing a currency symbol.

Definition at line 1151 of file locale_facets_nonio.h.

References std::moneypunct< _CharT, _Intl >::do_curr_symbol().

4.720.4.2 template<typename _CharT , bool _Intl> char_type std::moneypunct< _CharT, _Intl >::decimal_point ( ) const [inline]

Return decimal point character.

This function returns a char_type to use as a decimal point. It does so by returning returning moneypunct<char_type>::do_decimal_point().

Returns

char_type representing a decimal point.

Definition at line 1095 of file locale_facets_nonio.h.

References std::moneypunct< _CharT, _Intl >::do_decimal_point().

4.720.4.3 template<typename _CharT , bool _Intl> virtual string_type std::moneypunct< _CharT, _Intl >::do_curr_symbol ( ) const [inline], [protected], [virtual]

Return currency symbol string.

This function returns a string_type to use as a currency symbol. This function is a hook for derived classes to change the value returned.

See Also

curr_symbol() for details.

Returns

string_type representing a currency symbol.

Definition at line 1297 of file locale_facets_nonio.h.

Referenced by std::moneypunct< _CharT, _Intl >::curr_symbol().

4.720.4.4 template<typename _CharT , bool _Intl> virtual char_type std::moneypunct< _CharT, _Intl >::do_decimal_point ( ) const [inline],[protected],[virtual]

Return decimal point character.

Returns a char_type to use as a decimal point. This function is a hook for derived classes to change the value returned.

Returns

char_type representing a decimal point.

Definition at line 1259 of file locale_facets_nonio.h.

Referenced by std::moneypunct< _CharT, _Intl >::decimal_point().

4.720.4.5 template<typename _CharT , bool _Intl> virtual int std::moneypunct< _CharT, _Intl >::do_frac_digits ( ) const [inline],[protected],[virtual]

Return number of digits in fraction.

This function returns the exact number of digits that make up the fractional part of a money amount. This function is a hook for derived classes to change the value returned.

See Also

frac_digits() for details.

Returns

Number of digits in amount fraction.

Definition at line 1337 of file locale_facets_nonio.h.

Referenced by std::moneypunct< _CharT, _Intl >::frac_digits().

4.720.4.6 template<typename _CharT , bool _Intl> virtual string std::moneypunct< _CharT, _Intl >::do_grouping ( ) const [inline],[protected],[virtual]

Return grouping specification.

Returns a string representing groupings for the integer part of a number. This function is a hook for derived classes to change the value returned.

See Also

grouping() for details.

Returns

String representing grouping specification.

Definition at line 1284 of file locale_facets_nonio.h.

Referenced by std::moneypunct< _CharT, _Intl >::grouping().

4.720.4.7 template<typename _CharT , bool _Intl> virtual pattern std::moneypunct< _CharT, _Intl >::do_neg_format ( ) const [inline],[protected],[virtual]

Return pattern for money values.

This function returns a pattern describing the formatting of a negative valued money amount. This function is a hook for derived classes to change the value returned.

See Also

neg_format() for details.

Returns

Pattern for money values.

Definition at line 1365 of file locale_facets_nonio.h.

Referenced by std::moneypunct< _CharT, _Intl >::neg_format().

4.720.4.8 template<typename _CharT , bool _Intl> virtual string_type std::moneypunct< _CharT, _Intl >::do_negative_sign ( ) const [inline], [protected], [virtual]

Return negative sign string.

This function returns a string_type to use as a sign for negative amounts. This function is a hook for derived classes to change the value returned.

See Also

negative_sign() for details.

Returns

string_type representing a negative sign.

Definition at line 1323 of file locale_facets_nonio.h.

Referenced by std::moneypunct< _CharT, _Intl >::negative_sign().

4.720.4.9 template<typename _CharT , bool _Intl> virtual pattern std::moneypunct< _CharT, _Intl >::do_pos_format ( ) const [inline], [protected], [virtual]

Return pattern for money values.

This function returns a pattern describing the formatting of a positive valued money amount. This function is a hook for derived classes to change the value returned.

See Also

pos_format() for details.

Returns

Pattern for money values.

Definition at line 1351 of file locale_facets_nonio.h.

Referenced by std::moneypunct< _CharT, _Intl >::pos_format().

4.720.4.10 template<typename _CharT , bool _Intl> virtual string_type std::moneypunct< _CharT, _Intl >::do_positive_sign ( ) const [inline], [protected], [virtual]

Return positive sign string.

This function returns a string_type to use as a sign for positive amounts. This function is a hook for derived classes to change the value returned.

See Also

positive_sign() for details.

Returns

string_type representing a positive sign.

Definition at line 1310 of file locale_facets_nonio.h.

Referenced by std::moneypunct< _CharT, _Intl >::positive_sign().

4.720.4.11 template<typename _CharT , bool _Intl> virtual char_type std::moneypunct< _CharT, _Intl >::do_thousands_sep ( ) const [inline],[protected],[virtual]

Return thousands separator character.

Returns a char_type to use as a thousands separator. This function is a hook for derived classes to change the value returned.

Returns

char_type representing a thousands separator.

Definition at line 1271 of file locale_facets_nonio.h.

Referenced by std::moneypunct< _CharT, _Intl >::thousands_sep().

4.720.4.12 template<typename _CharT , bool _Intl> int std::moneypunct< _CharT, _Intl >::frac_digits ( ) const [inline]

Return number of digits in fraction.

This function returns the exact number of digits that make up the fractional part of a money amount. It does so by returning returning moneypunct<char_type>::do_frac_digits().

The fractional part of a money amount is optional. But if it is present, there must be frac_digits() digits.

Returns

Number of digits in amount fraction.

Definition at line 1201 of file locale_facets_nonio.h.

References std::moneypunct< _CharT, _Intl >::do_frac_digits().

4.720.4.13 template<typename _CharT , bool _Intl> string std::moneypunct< _CharT, _Intl >::grouping ( ) const [inline]

Return grouping specification.

This function returns a string representing groupings for the integer part of an amount. Groupings indicate where thousands separators should be inserted.

Each char in the return string is interpret as an integer rather than a character. These numbers represent the number of digits in a group. The first char in the string represents the number of digits in the least significant group. If a char is negative, it indicates an unlimited number of digits for the group. If more chars from the string are required to group a number, the last char is used repeatedly.

For example, if the grouping() returns `\003\002` and is applied to the number 123456789, this corresponds to 12,34,56,789. Note that if the string was `32`, this would put more than 50 digits into the least significant group if the character set is ASCII.

The string is returned by calling moneypunct<char_type>::do_grouping().

Returns

string representing grouping specification.

Definition at line 1138 of file locale_facets_nonio.h.

References std::moneypunct< _CharT, _Intl >::do_grouping().

4.720.4.14 template<typename _CharT , bool _Intl> pattern std::moneypunct< _CharT, _Intl >::neg_format ( ) const [inline]

Return pattern for money values.

This function returns a pattern describing the formatting of a positive or negative valued money amount. It does so by returning returning moneypunct<char_type>::do_pos_format() or moneypunct<char_type>::do_neg_format().

The pattern has 4 fields describing the ordering of symbol, sign, value, and none or space. There must be one of each in the pattern. The none and space enums may not appear in the first field and space may not appear in the final field.

The parts of a money string must appear in the order indicated by the fields of the pattern. The symbol field indicates that the value of curr_symbol() may be present. The sign field indicates that the value of positive_sign() or negative_sign() must be present. The value field indicates that the absolute value of the money amount is present. none indicates 0 or more whitespace characters, except at the end, where it permits no whitespace. space indicates that 1 or more whitespace characters must be present.

For example, for the US locale and pos_format() pattern {symbol,sign,value,none}, curr_symbol() == '$' positive_sign() == '+', and value 10.01, and options set to force the symbol, the corresponding string is `$+10.01`.

Returns

Pattern for money values.

Definition at line 1241 of file locale_facets_nonio.h.

References std::moneypunct< _CharT, _Intl >::do_neg_format().

4.720.4.15 template<typename _CharT , bool _Intl> string_type std::moneypunct< _CharT, _Intl >::negative_sign ( ) const [inline]

Return negative sign string.

This function returns a string_type to use as a sign for negative amounts. It does so by returning returning moneypunct<char_type>::do_negative_sign().

If the return value contains more than one character, the first character appears in the position indicated by neg_format() and the remainder appear at the end of the formatted string.

Returns

string_type representing a negative sign.

Definition at line 1185 of file locale_facets_nonio.h.

References std::moneypunct< _CharT, _Intl >::do_negative_sign().

4.720.4.16 template<typename _CharT , bool _Intl> pattern std::moneypunct< _CharT, _Intl >::pos_format ( ) const [inline]

Return pattern for money values.

This function returns a pattern describing the formatting of a positive or negative valued money amount. It does so by returning returning moneypunct<char_type>::do_pos_format() or moneypunct<char_type>::do_neg_format().

The pattern has 4 fields describing the ordering of symbol, sign, value, and none or space. There must be one of each in the pattern. The none and space enums may not appear in the first field and space may not appear in the final field.

The parts of a money string must appear in the order indicated by the fields of the pattern. The symbol field indicates that the value of curr_symbol() may be present. The sign field indicates that the value of positive_sign() or negative_sign() must be present. The value field indicates that the absolute value of the money amount is present. none indicates 0 or more whitespace characters, except at the end, where it permits no whitespace. space indicates that 1 or more whitespace characters must be present.

For example, for the US locale and pos_format() pattern {symbol,sign,value,none}, curr_symbol() == '$' positive_sign() == '+', and value 10.01, and options set to force the symbol, the corresponding string is `$+10.01`.

Returns

Pattern for money values.

Definition at line 1237 of file locale_facets_nonio.h.

References std::moneypunct< _CharT, _Intl >::do_pos_format().

4.720.4.17 template<typename _CharT , bool _Intl> string_type std::moneypunct< _CharT, _Intl >::positive_sign ( ) const [inline]

Return positive sign string.

This function returns a string_type to use as a sign for positive amounts. It does so by returning returning moneypunct<char_type>::do_positive_sign().

If the return value contains more than one character, the first character appears in the position indicated by pos_format() and the remainder appear at the end of the formatted string.

Returns

string_type representing a positive sign.

Definition at line 1168 of file locale_facets_nonio.h.

References std::moneypunct< _CharT, _Intl >::do_positive_sign().

4.720.4.18 template<typename _CharT , bool _Intl> char_type std::moneypunct< _CharT, _Intl >::thousands_sep ( ) const [inline]

Return thousands separator character.

This function returns a char_type to use as a thousands separator. It does so by returning returning moneypunct<char_type>::do_thousands_sep().

Returns

char_type representing a thousands separator.

Definition at line 1108 of file locale_facets_nonio.h.

References std::moneypunct< _CharT, _Intl >::do_thousands_sep().

4.721.1 Detailed Description

template<typename _CharT, bool _Intl>class std::moneypunct_byname< _CharT, _Intl >

class moneypunct_byname [22.2.6.4].

Definition at line 1414 of file locale_facets_nonio.h.

4.721.2 Member Function Documentation

4.721.2.1 template<typename _CharT , bool _Intl> string_type std::moneypunct< _CharT, _Intl >::curr_symbol ( ) const [inline], [inherited]

Return currency symbol string.

This function returns a string_type to use as a currency symbol. It does so by returning returning moneypunct<char_type>::do_curr_symbol().

Returns

string_type representing a currency symbol.

Definition at line 1151 of file locale_facets_nonio.h.

References std::moneypunct< _CharT, _Intl >::do_curr_symbol().

4.721.2.2 template<typename _CharT , bool _Intl> char_type std::moneypunct< _CharT, _Intl >::decimal_point ( ) const [inline], [inherited]

Return decimal point character.

This function returns a char_type to use as a decimal point. It does so by returning returning moneypunct<char_type>::do_decimal_point().

Returns

char_type representing a decimal point.

Definition at line 1095 of file locale_facets_nonio.h.

References std::moneypunct< _CharT, _Intl >::do_decimal_point().

4.721.2.3 template<typename _CharT , bool _Intl> virtual string_type std::moneypunct< _CharT, _Intl >::do_curr_symbol ( ) const [inline], [protected], [virtual], [inherited]

Return currency symbol string.

This function returns a string_type to use as a currency symbol. This function is a hook for derived classes to change the value returned.

See Also

curr_symbol() for details.

Returns

string_type representing a currency symbol.

Definition at line 1297 of file locale_facets_nonio.h.

Referenced by std::moneypunct< _CharT, _Intl >::curr_symbol().

4.721.2.4 template<typename _CharT , bool _Intl> virtual char_type std::moneypunct< _CharT, _Intl >::do_decimal_point ( ) const [inline], [protected], [virtual], [inherited]

Return decimal point character.

Returns a char_type to use as a decimal point. This function is a hook for derived classes to change the value returned.

Returns

char_type representing a decimal point.

Definition at line 1259 of file locale_facets_nonio.h.

Referenced by std::moneypunct< _CharT, _Intl >::decimal_point().

4.721.2.5 template<typename _CharT , bool _Intl> virtual int std::moneypunct< _CharT, _Intl >::do_frac_digits ( ) const [inline], [protected], [virtual], [inherited]

Return number of digits in fraction.

This function returns the exact number of digits that make up the fractional part of a money amount. This function is a hook for derived classes to change the value returned.

See Also

frac_digits() for details.

Returns

Number of digits in amount fraction.

Definition at line 1337 of file locale_facets_nonio.h.

Referenced by std::moneypunct< _CharT, _Intl >::frac_digits().

4.721.2.6 template<typename _CharT , bool _Intl> virtual string std::moneypunct< _CharT, _Intl >::do_grouping ( ) const [inline], [protected], [virtual], [inherited]

Return grouping specification.

Returns a string representing groupings for the integer part of a number. This function is a hook for derived classes to change the value returned.

See Also

grouping() for details.

Returns

String representing grouping specification.

Definition at line 1284 of file locale_facets_nonio.h.

Referenced by std::moneypunct< _CharT, _Intl >::grouping().

4.721.2.7 template<typename _CharT , bool _Intl> virtual pattern std::moneypunct< _CharT, _Intl >::do_neg_format ( ) const [inline], [protected], [virtual], [inherited]

Return pattern for money values.

This function returns a pattern describing the formatting of a negative valued money amount. This function is a hook for derived classes to change the value returned.

See Also

neg_format() for details.

Returns

Pattern for money values.

Definition at line 1365 of file locale_facets_nonio.h.

Referenced by std::moneypunct< _CharT, _Intl >::neg_format().

4.721.2.8 template<typename _CharT , bool _Intl> virtual string_type std::moneypunct< _CharT, _Intl >::do_negative_sign ( ) const [inline], [protected], [virtual], [inherited]

Return negative sign string.

This function returns a string_type to use as a sign for negative amounts. This function is a hook for derived classes to change the value returned.

See Also

negative_sign() for details.

Returns

string_type representing a negative sign.

Definition at line 1323 of file locale_facets_nonio.h.

Referenced by std::moneypunct< _CharT, _Intl >::negative_sign().

4.721.2.9 template<typename _CharT , bool _Intl> virtual pattern std::moneypunct< _CharT, _Intl >::do_pos_format ( ) const [inline], [protected], [virtual], [inherited]

Return pattern for money values.

This function returns a pattern describing the formatting of a positive valued money amount. This function is a hook for derived classes to change the value returned.

See Also

pos_format() for details.

Returns

Pattern for money values.

Definition at line 1351 of file locale_facets_nonio.h.

Referenced by std::moneypunct< _CharT, _Intl >::pos_format().

4.721.2.10 template<typename _CharT , bool _Intl> virtual string_type std::moneypunct< _CharT, _Intl >::do_positive_sign ( ) const [inline], [protected], [virtual], [inherited]

Return positive sign string.

This function returns a string_type to use as a sign for positive amounts. This function is a hook for derived classes to change the value returned.

See Also

positive_sign() for details.

Returns

string_type representing a positive sign.

Definition at line 1310 of file locale_facets_nonio.h.

Referenced by std::moneypunct< _CharT, _Intl >::positive_sign().

4.721.2.11 template<typename _CharT , bool _Intl> virtual char_type std::moneypunct< _CharT, _Intl >::do_thousands_sep ( ) const [inline], [protected], [virtual], [inherited]

Return thousands separator character.

Returns a char_type to use as a thousands separator. This function is a hook for derived classes to change the value returned.

Returns

char_type representing a thousands separator.

Definition at line 1271 of file locale_facets_nonio.h.

Referenced by std::moneypunct< _CharT, _Intl >::thousands_sep().

4.721.2.12 template<typename _CharT , bool _Intl> int std::moneypunct< _CharT, _Intl >::frac_digits ( ) const [inline], [inherited]

Return number of digits in fraction.

This function returns the exact number of digits that make up the fractional part of a money amount. It does so by returning returning moneypunct<char_type>::do_frac_digits().

The fractional part of a money amount is optional. But if it is present, there must be frac_digits() digits.

Returns

Number of digits in amount fraction.

Definition at line 1201 of file locale_facets_nonio.h.

References std::moneypunct< _CharT, _Intl >::do_frac_digits().

4.721.2.13 template<typename _CharT , bool _Intl> string std::moneypunct< _CharT, _Intl >::grouping ( ) const [inline], [inherited]

Return grouping specification.

This function returns a string representing groupings for the integer part of an amount. Groupings indicate where thousands separators should be inserted.

Each char in the return string is interpret as an integer rather than a character. These numbers represent the number of digits in a group. The first char in the string represents the number of digits in the least significant group. If a char is negative, it indicates an unlimited number of digits for the group. If more chars from the string are required to group a number, the last char is used repeatedly.

For example, if the grouping() returns `\003\002` and is applied to the number 123456789, this corresponds to 12,34,56,789. Note that if the string was `32`, this would put more than 50 digits into the least significant group if the character set is ASCII.

The string is returned by calling moneypunct<char_type>::do_grouping().

Returns

string representing grouping specification.

Definition at line 1138 of file locale_facets_nonio.h.

References std::moneypunct< _CharT, _Intl >::do_grouping().

4.721.2.14 template<typename _CharT , bool _Intl> pattern std::moneypunct< _CharT, _Intl >::neg_format ( ) const [inline], [inherited]

Return pattern for money values.

This function returns a pattern describing the formatting of a positive or negative valued money amount. It does so by returning returning moneypunct<char_type>::do_pos_format() or moneypunct<char_type>::do_neg_format().

The pattern has 4 fields describing the ordering of symbol, sign, value, and none or space. There must be one of each in the pattern. The none and space enums may not appear in the first field and space may not appear in the final field.

The parts of a money string must appear in the order indicated by the fields of the pattern. The symbol field indicates that the value of curr_symbol() may be present. The sign field indicates that the value of positive_sign() or negative_sign() must be present. The value field indicates that the absolute value of the money amount is present. none indicates 0 or more whitespace characters, except at the end, where it permits no whitespace. space indicates that 1 or more whitespace characters must be present.

For example, for the US locale and pos_format() pattern {symbol,sign,value,none}, curr_symbol() == '$' positive_sign() == '+', and value 10.01, and options set to force the symbol, the corresponding string is `$+10.01`.

Returns

Pattern for money values.

Definition at line 1241 of file locale_facets_nonio.h.

References std::moneypunct< _CharT, _Intl >::do_neg_format().

4.721.2.15 template<typename _CharT , bool _Intl> string_type std::moneypunct< _CharT, _Intl >::negative_sign ( ) const [inline], [inherited]

Return negative sign string.

This function returns a string_type to use as a sign for negative amounts. It does so by returning returning moneypunct<char_type>::do_negative_sign().

If the return value contains more than one character, the first character appears in the position indicated by neg_format() and the remainder appear at the end of the formatted string.

Returns

string_type representing a negative sign.

Definition at line 1185 of file locale_facets_nonio.h.

References std::moneypunct< _CharT, _Intl >::do_negative_sign().

4.721.2.16 template<typename _CharT , bool _Intl> pattern std::moneypunct< _CharT, _Intl >::pos_format ( ) const [inline], [inherited]

Return pattern for money values.

This function returns a pattern describing the formatting of a positive or negative valued money amount. It does so by returning returning moneypunct<char_type>::do_pos_format() or moneypunct<char_type>::do_neg_format().

The pattern has 4 fields describing the ordering of symbol, sign, value, and none or space. There must be one of each in the pattern. The none and space enums may not appear in the first field and space may not appear in the final field.

The parts of a money string must appear in the order indicated by the fields of the pattern. The symbol field indicates that the value of curr_symbol() may be present. The sign field indicates that the value of positive_sign() or negative_sign() must be present. The value field indicates that the absolute value of the money amount is present. none indicates 0 or more whitespace characters, except at the end, where it permits no whitespace. space indicates that 1 or more whitespace characters must be present.

For example, for the US locale and pos_format() pattern {symbol,sign,value,none}, curr_symbol() == '$' positive_sign() == '+', and value 10.01, and options set to force the symbol, the corresponding string is `$+10.01`.

Returns

Pattern for money values.

Definition at line 1237 of file locale_facets_nonio.h.

References std::moneypunct< _CharT, _Intl >::do_pos_format().

4.721.2.17 template<typename _CharT , bool _Intl> string_type std::moneypunct< _CharT, _Intl >::positive_sign ( ) const [inline], [inherited]

Return positive sign string.

This function returns a string_type to use as a sign for positive amounts. It does so by returning returning moneypunct<char_type>::do_positive_sign().

If the return value contains more than one character, the first character appears in the position indicated by pos_format() and the remainder appear at the end of the formatted string.

Returns

string_type representing a positive sign.

Definition at line 1168 of file locale_facets_nonio.h.

References std::moneypunct< _CharT, _Intl >::do_positive_sign().

4.721.2.18 template<typename _CharT , bool _Intl> char_type std::moneypunct< _CharT, _Intl >::thousands_sep ( ) const [inline], [inherited]

Return thousands separator character.

This function returns a char_type to use as a thousands separator. It does so by returning returning moneypunct<char-_type>::do_thousands_sep().

Returns

char_type representing a thousands separator.

Definition at line 1108 of file locale_facets_nonio.h.

References std::moneypunct< _CharT, _Intl >::do_thousands_sep().

4.722.1 Detailed Description

template<typename _Iterator>class std::move_iterator< _Iterator >

Class template move_iterator is an iterator adapter with the same behavior as the underlying iterator except that its dereference operator implicitly converts the value returned by the underlying iterator's dereference operator to an rvalue reference. Some generic algorithms can be called with move iterators to replace copying with moving.

Definition at line 1286 of file bits/stl_iterator.h.

4.723.1 Detailed Description

template<typename _Key, typename _Tp, typename _Compare = std::less<_Key>, typename _Allocator = std::allocator<std::pair<const _Key, _Tp> >>class std::__debug::multimap< _Key, _Tp, _Compare, _Allocator >

Class std::multimap with safety/checking/debug instrumentation.

Definition at line 44 of file multimap.h.

4.723.2 Member Function Documentation

4.723.2.1 void __gnu_debug::_Safe_sequence_base::_M_detach_all ( ) [protected], [inherited]

Detach all iterators, leaving them singular.

Referenced by __gnu_debug::_Safe_sequence_base::~_Safe_sequence_base().

4.723.2.2 void __gnu_debug::_Safe_sequence_base::_M_detach_singular ( ) [protected], [inherited]

Detach all singular iterators.

Postcondition

for all iterators i attached to this sequence, i->_M_version == _M_version.

4.723.2.3 __gnu_cxx::__mutex& __gnu_debug::_Safe_sequence_base::_M_get_mutex ( ) throw) [protected], [inherited]

For use in _Safe_sequence.

Referenced by __gnu_debug::_Safe_sequence< _Sequence >::_M_transfer_from_if().

4.723.2.4 void __gnu_debug::_Safe_sequence_base::_M_invalidate_all ( ) const [inline], [protected], [inherited]

Invalidates all iterators.

Definition at line 256 of file safe_base.h.

References __gnu_debug::_Safe_sequence_base::_M_version.

4.723.2.5 void __gnu_debug::_Safe_sequence< multimap< _Key, _Tp, _Compare, _Allocator > >::_M_invalidate_if (_Predicate __pred) [inherited]

Invalidates all iterators `x` that reference this sequence, are not singular, and for which `__pred(x)` returns `true`. `__pred` will be invoked with the normal iterators nested in the safe ones.

4.723.2.6 void __gnu_debug::_Safe_sequence_base::_M_revalidate_singular ( ) [protected], [inherited]

Revalidates all attached singular iterators. This method may be used to validate iterators that were invalidated before (but for some reason, such as an exception, need to become valid again).

4.723.2.7 void __gnu_debug::_Safe_sequence_base::_M_swap (_Safe_sequence_base & __x) [protected], [noexcept], [inherited]

Swap this sequence with the given sequence. This operation also swaps ownership of the iterators, so that when the operation is complete all iterators that originally referenced one container now reference the other container.

4.723.2.8 void __gnu_debug::_Safe_sequence< multimap< _Key, _Tp, _Compare, _Allocator > >::_M_transfer_from_if (_Safe_sequence< multimap< _Key, _Tp, _Compare, _Allocator > > & __from, _Predicate __pred) [inherited]

Transfers all iterators `x` that reference `from` sequence, are not singular, and for which `__pred(x)` returns `true`. `__pred` will be invoked with the normal iterators nested in the safe ones.

4.723.3 Member Data Documentation

4.723.3.1 _Safe_iterator_base* __gnu_debug::_Safe_sequence_base::_M_const_iterators [inherited]

The list of constant iterators that reference this container.

Definition at line 197 of file safe_base.h.

Referenced by __gnu_debug::_Safe_sequence< _Sequence >::_M_transfer_from_if().

4.723.3.2 _Safe_iterator_base* __gnu_debug::_Safe_sequence_base::_M_iterators [inherited]

The list of mutable iterators that reference this container.

4.724.1 Detailed Description

template<typename _Key, typename _Tp, typename _Compare, typename _Alloc>class std::multimap< _Key, _Tp, _Compare, _Alloc >

A standard container made up of (key,value) pairs, which can be retrieved based on a key, in logarithmic time.

Template Parameters

_Key	Type of key objects.

_Tp	Type of mapped objects.
_Compare	Comparison function object type, defaults to less<_Key>.
_Alloc	Allocator type, defaults to allocator<pair<const _Key, _Tp>>.

Meets the requirements of a container, a reversible container, and an associative container (using equivalent keys). For a multimap<Key,T> the key_type is Key, the mapped_type is T, and the value_type is std::pair<const Key,T>.

Multimaps support bidirectional iterators.

The private tree data is declared exactly the same way for map and multimap; the distinction is made entirely in how the tree functions are called (*_unique versus *_equal, same as the standard).

Definition at line 72 of file stl_map.h.

4.724.2 Constructor & Destructor Documentation

4.724.2.1 template<typename _Key , typename _Tp , typename _Compare , typename _Alloc > std::multimap< _Key, _Tp, _Compare, _Alloc >::multimap ( ) [default]

Default constructor creates no elements.

4.724.2.2 template<typename _Key , typename _Tp , typename _Compare , typename _Alloc > std::multimap< _Key, _Tp, _Compare, _Alloc >::multimap (const _Compare & *__comp*, const allocator_type & *__a* = allocator_type()) [inline], [explicit]

Creates a multimap with no elements.

Parameters

__comp	A comparison object.
__a	An allocator object.

Definition at line 191 of file stl_multimap.h.

4.724.2.3 template<typename _Key , typename _Tp , typename _Compare , typename _Alloc > std::multimap< _Key, _Tp, _Compare, _Alloc >::multimap (const multimap< _Key, _Tp, _Compare, _Alloc > &) [default]

Multimap copy constructor.

Whether the allocator is copied depends on the allocator traits.

4.724.2.4 template<typename _Key , typename _Tp , typename _Compare , typename _Alloc > std::multimap< _Key, _Tp, _Compare, _Alloc >::multimap (multimap< _Key, _Tp, _Compare, _Alloc > &&) [default]

Multimap move constructor.

The newly-created multimap contains the exact contents of the moved instance. The moved instance is a valid, but unspecified multimap.

4.724.2.5 template<typename _Key , typename _Tp , typename _Compare , typename _Alloc > std::multimap< _Key, _Tp, _Compare, _Alloc >::multimap (initializer_list< value_type > *__l*, const _Compare & *__comp* = _Compare(), const allocator_type & *__a* = allocator_type()) [inline]

Builds a multimap from an initializer_list.

Parameters

__l	An initializer_list.
__comp	A comparison functor.
__a	An allocator object.

Create a multimap consisting of copies of the elements from the initializer_list. This is linear in N if the list is already sorted, and NlogN otherwise (where N is *__l.size()*).

Definition at line 225 of file stl_multimap.h.

4.724.2.6 template<typename _Key , typename _Tp , typename _Compare , typename _Alloc > std::multimap< _Key, _Tp, _Compare, _Alloc >::multimap (const allocator_type & *__a*) [inline], [explicit]

Allocator-extended default constructor.

Definition at line 233 of file stl_multimap.h.

4.724.2.7 template<typename _Key , typename _Tp , typename _Compare , typename _Alloc > std::multimap< _Key, _Tp, _Compare, _Alloc >::multimap (const multimap< _Key, _Tp, _Compare, _Alloc > & *__m,* const allocator_type & *__a*) [inline]

Allocator-extended copy constructor.

Definition at line 237 of file stl_multimap.h.

4.724.2.8 template<typename _Key , typename _Tp , typename _Compare , typename _Alloc > std::multimap< _Key, _Tp, _Compare, _Alloc >::multimap (multimap< _Key, _Tp, _Compare, _Alloc > && *__m,* const allocator_type & *__a*) [inline], [noexcept]

Allocator-extended move constructor.

Definition at line 241 of file stl_multimap.h.

4.724.2.9 template<typename _Key , typename _Tp , typename _Compare , typename _Alloc > std::multimap< _Key, _Tp, _Compare, _Alloc >::multimap (initializer_list< value_type > *__l,* const allocator_type & *__a*) [inline]

Allocator-extended initialier-list constructor.

Definition at line 247 of file stl_multimap.h.

4.724.2.10 template<typename _Key , typename _Tp , typename _Compare , typename _Alloc > template<typename _InputIterator > std::multimap< _Key, _Tp, _Compare, _Alloc >::multimap (_InputIterator *__first,* _InputIterator *__last,* const allocator_type & *__a*) [inline]

Allocator-extended range constructor.

Definition at line 253 of file stl_multimap.h.

4.724.2.11 template<typename _Key , typename _Tp , typename _Compare , typename _Alloc > template<typename _InputIterator > std::multimap< _Key, _Tp, _Compare, _Alloc >::multimap (_InputIterator *__first,* _InputIterator *__last*) [inline]

Builds a multimap from a range.

Parameters

__first	An input iterator.
__last	An input iterator.

Create a multimap consisting of copies of the elements from [__first,__last). This is linear in N if the range is already sorted, and NlogN otherwise (where N is distance(__first,__last)).

Definition at line 269 of file stl_multimap.h.

4.724.2.12 template<typename _Key , typename _Tp , typename _Compare , typename _Alloc > template<typename _InputIterator > std::multimap< _Key, _Tp, _Compare, _Alloc >::multimap (_InputIterator __first, _InputIterator __last, const _Compare & __comp, const allocator_type & __a = allocator_type()) [inline]

Builds a multimap from a range.

Parameters

__first	An input iterator.
__last	An input iterator.
__comp	A comparison functor.
__a	An allocator object.

Create a multimap consisting of copies of the elements from [__first,__last). This is linear in N if the range is already sorted, and NlogN otherwise (where N is distance(__first,__last)).

Definition at line 285 of file stl_multimap.h.

4.724.2.13 template<typename _Key , typename _Tp , typename _Compare , typename _Alloc > std::multimap< _Key, _Tp, _Compare, _Alloc >::~multimap ( ) [default]

The dtor only erases the elements, and note that if the elements themselves are pointers, the pointed-to memory is not touched in any way. Managing the pointer is the user's responsibility.

4.724.3 Member Function Documentation

4.724.3.1 template<typename _Key , typename _Tp , typename _Compare , typename _Alloc > iterator std::multimap< _Key, _Tp, _Compare, _Alloc >::begin ( ) [inline], [noexcept]

Returns a read/write iterator that points to the first pair in the multimap. Iteration is done in ascending order according to the keys.

Definition at line 351 of file stl_multimap.h.

4.724.3.2 template<typename _Key , typename _Tp , typename _Compare , typename _Alloc > const_iterator std::multimap< _Key, _Tp, _Compare, _Alloc >::begin ( ) const [inline], [noexcept]

Returns a read-only (constant) iterator that points to the first pair in the multimap. Iteration is done in ascending order according to the keys.

Definition at line 360 of file stl_multimap.h.

4.724.3.3 template<typename _Key , typename _Tp , typename _Compare , typename _Alloc > const_iterator std::multimap< _Key, _Tp, _Compare, _Alloc >::cbegin ( ) const [inline], [noexcept]

Returns a read-only (constant) iterator that points to the first pair in the multimap. Iteration is done in ascending order according to the keys.

Definition at line 424 of file stl_multimap.h.

4.724.3.4 template<typename _Key , typename _Tp , typename _Compare , typename _Alloc > const_iterator std::multimap< _Key, _Tp, _Compare, _Alloc >::cend ( ) const [inline], [noexcept]

Returns a read-only (constant) iterator that points one past the last pair in the multimap. Iteration is done in ascending order according to the keys.

Definition at line 433 of file stl_multimap.h.

4.724.3.5 template<typename _Key , typename _Tp , typename _Compare , typename _Alloc > void std::multimap< _Key, _Tp, _Compare, _Alloc >::clear ( ) [inline], [noexcept]

Erases all elements in a multimap. Note that this function only erases the elements, and that if the elements themselves are pointers, the pointed-to memory is not touched in any way. Managing the pointer is the user's responsibility.

Definition at line 808 of file stl_multimap.h.

4.724.3.6 template<typename _Key , typename _Tp , typename _Compare , typename _Alloc > size_type std::multimap< _Key, _Tp, _Compare, _Alloc >::count (const key_type & __x) const [inline]

Finds the number of elements with given key.

Parameters

__x	Key of (key, value) pairs to be located.

Returns

Number of elements with specified key.

Definition at line 885 of file stl_multimap.h.

4.724.3.7 template<typename _Key , typename _Tp , typename _Compare , typename _Alloc > template<typename _Kt > auto std::multimap< _Key, _Tp, _Compare, _Alloc >::count (const _Kt & __x) const -> decltype(_M_t._M_count_tr(__x)) [inline]

Finds the number of elements with given key.

Parameters

__x	Key of (key, value) pairs to be located.

Returns

Number of elements with specified key.

Definition at line 891 of file stl_multimap.h.

4.724.3.8 template<typename _Key , typename _Tp , typename _Compare , typename _Alloc > const_reverse_iterator std::multimap< _Key, _Tp, _Compare, _Alloc >::crbegin ( ) const [inline], [noexcept]

Returns a read-only (constant) reverse iterator that points to the last pair in the multimap. Iteration is done in descending order according to the keys.

Definition at line 442 of file stl_multimap.h.

4.724.3.9 template<typename _Key , typename _Tp , typename _Compare , typename _Alloc > const_reverse_iterator std::multimap< _Key, _Tp, _Compare, _Alloc >::crend ( ) const [inline], [noexcept]

Returns a read-only (constant) reverse iterator that points to one before the first pair in the multimap. Iteration is done in descending order according to the keys.

Definition at line 451 of file stl_multimap.h.

4.724.3.10 template<typename _Key , typename _Tp , typename _Compare , typename _Alloc > template<typename... _Args> iterator std::multimap< _Key, _Tp, _Compare, _Alloc >::emplace (_Args &&... *__args*) [inline]

Build and insert a std::pair into the multimap.

Parameters

__args	Arguments used to generate a new pair instance (see std::piecewise_contruct for passing arguments to each part of the pair constructor).

Returns

An iterator that points to the inserted (key,value) pair.

This function builds and inserts a (key, value) pair into the multimap. Contrary to a std::map the multimap does not rely on unique keys and thus multiple pairs with the same key can be inserted.

Insertion requires logarithmic time.

Definition at line 491 of file stl_multimap.h.

4.724.3.11 template<typename _Key , typename _Tp , typename _Compare , typename _Alloc > template<typename... _Args> iterator std::multimap< _Key, _Tp, _Compare, _Alloc >::emplace_hint (const_iterator *__pos*, _Args &&... *__args*) [inline]

Builds and inserts a std::pair into the multimap.

Parameters

__pos	An iterator that serves as a hint as to where the pair should be inserted.
__args	Arguments used to generate a new pair instance (see std::piecewise_contruct for passing arguments to each part of the pair constructor).

Returns

An iterator that points to the inserted (key,value) pair.

This function inserts a (key, value) pair into the multimap. Contrary to a std::map the multimap does not rely on unique keys and thus multiple pairs with the same key can be inserted. Note that the first parameter is only a hint and can potentially improve the performance of the insertion process. A bad hint would cause no gains in efficiency.

For more on *hinting*, see: https://gcc.gnu.org/onlinedocs/libstdc++/manual/associative.html#containers.associative.insert_hints

Insertion requires logarithmic time (if the hint is not taken).

Definition at line 518 of file stl_multimap.h.

4.724.3.12 template<typename _Key , typename _Tp , typename _Compare , typename _Alloc > bool std::multimap< _Key, _Tp, _Compare, _Alloc >::empty ( ) const [inline], [noexcept]

Returns true if the multimap is empty.

Definition at line 458 of file stl_multimap.h.

4.724.3.13 template<typename _Key , typename _Tp , typename _Compare , typename _Alloc > iterator std::multimap< _Key, _Tp, _Compare, _Alloc >::end ( ) [inline], [noexcept]

Returns a read/write iterator that points one past the last pair in the multimap. Iteration is done in ascending order according to the keys.

Definition at line 369 of file stl_multimap.h.

4.724.3.14 template<typename _Key , typename _Tp , typename _Compare , typename _Alloc > const_iterator std::multimap< _Key, _Tp, _Compare, _Alloc >::end ( ) const [inline], [noexcept]

Returns a read-only (constant) iterator that points one past the last pair in the multimap. Iteration is done in ascending order according to the keys.

Definition at line 378 of file stl_multimap.h.

4.724.3.15 template<typename _Key , typename _Tp , typename _Compare , typename _Alloc > std::pair<iterator, iterator> std::multimap< _Key, _Tp, _Compare, _Alloc >::equal_range (const key_type & __x) [inline]

Finds a subsequence matching given key.

Parameters

__x	Key of (key, value) pairs to be located.

Returns

Pair of iterators that possibly points to the subsequence matching given key.

This function is equivalent to

```
std::make_pair(c.lower_bound(val),
               c.upper_bound(val))
```

(but is faster than making the calls separately).

Definition at line 1020 of file stl_multimap.h.

4.724.3.16 template<typename _Key , typename _Tp , typename _Compare , typename _Alloc > template<typename _Kt > auto std::multimap< _Key, _Tp, _Compare, _Alloc >::equal_range (const _Kt & __x) -> decltype(pair<iterator, iterator>(_M_t._M_equal_range_tr(__x))) [inline]

Finds a subsequence matching given key.

Parameters

__x	Key of (key, value) pairs to be located.

Returns

Pair of iterators that possibly points to the subsequence matching given key.

This function is equivalent to

```
std::make_pair(c.lower_bound(val),
               c.upper_bound(val))
```

(but is faster than making the calls separately).

Definition at line 1026 of file stl_multimap.h.

4.724.3.17 template<typename _Key , typename _Tp , typename _Compare , typename _Alloc > std::pair<const_iterator, const_iterator> std::multimap< _Key, _Tp, _Compare, _Alloc >::equal_range (const key_type & __x) const [inline]

Finds a subsequence matching given key.

Parameters

__x	Key of (key, value) pairs to be located.

Returns

Pair of read-only (constant) iterators that possibly points to the subsequence matching given key.

This function is equivalent to

```
std::make_pair(c.lower_bound(val),
               c.upper_bound(val))
```

(but is faster than making the calls separately).

Definition at line 1047 of file stl_multimap.h.

4.724.3.18 template<typename _Key , typename _Tp , typename _Compare , typename _Alloc > template<typename _Kt > auto std::multimap< _Key, _Tp, _Compare, _Alloc >::equal_range (const _Kt & *__x*) const -> decltype(pair<const_iterator, const_iterator>(_M_t._M_equal_range_tr(__x))) [inline]

Finds a subsequence matching given key.

Parameters

__x	Key of (key, value) pairs to be located.

Returns

Pair of read-only (constant) iterators that possibly points to the subsequence matching given key.

This function is equivalent to

```
std::make_pair(c.lower_bound(val),
               c.upper_bound(val))
```

(but is faster than making the calls separately).

Definition at line 1053 of file stl_multimap.h.

4.724.3.19 template<typename _Key , typename _Tp , typename _Compare , typename _Alloc > iterator std::multimap< _Key, _Tp, _Compare, _Alloc >::erase (const_iterator *__position*) [inline]

Erases an element from a multimap.

Parameters

__position	An iterator pointing to the element to be erased.

Returns

An iterator pointing to the element immediately following *position* prior to the element being erased. If no such element exists, end() is returned.

This function erases an element, pointed to by the given iterator, from a multimap. Note that this function only erases the element, and that if the element is itself a pointer, the pointed-to memory is not touched in any way. Managing the pointer is the user's responsibility.

Definition at line 702 of file stl_multimap.h.

4.724.3.20 template<typename _Key , typename _Tp , typename _Compare , typename _Alloc > _GLIBCXX_ABI_TAG_CXX11 iterator std::multimap< _Key, _Tp, _Compare, _Alloc >::erase (iterator *__position*) [inline]

Erases an element from a multimap.

Parameters

__position	An iterator pointing to the element to be erased.

Returns

An iterator pointing to the element immediately following *position* prior to the element being erased. If no such element exists, end() is returned.

This function erases an element, pointed to by the given iterator, from a multimap. Note that this function only erases the element, and that if the element is itself a pointer, the pointed-to memory is not touched in any way. Managing the pointer is the user's responsibility.

Definition at line 708 of file stl_multimap.h.

4.724.3.21 template<typename _Key , typename _Tp , typename _Compare , typename _Alloc > size_type std::multimap< _Key, _Tp, _Compare, _Alloc >::erase (const key_type & *__x*) [inline]

Erases elements according to the provided key.

Parameters

__x	Key of element to be erased.

Returns

The number of elements erased.

This function erases all elements located by the given key from a multimap. Note that this function only erases the element, and that if the element is itself a pointer, the pointed-to memory is not touched in any way. Managing the pointer is the user's responsibility.

Definition at line 739 of file stl_multimap.h.

4.724.3.22 template<typename _Key , typename _Tp , typename _Compare , typename _Alloc > iterator std::multimap< _Key, _Tp, _Compare, _Alloc >::erase (const_iterator *__first*, const_iterator *__last*) [inline]

Erases a [first,last) range of elements from a multimap.

Parameters

__first	Iterator pointing to the start of the range to be erased.
__last	Iterator pointing to the end of the range to be erased .

Returns

The iterator *__last*.

This function erases a sequence of elements from a multimap. Note that this function only erases the elements, and that if the elements themselves are pointers, the pointed-to memory is not touched in any way. Managing the pointer is the user's responsibility.

Definition at line 760 of file stl_multimap.h.

4.724.3.23 template<typename _Key , typename _Tp , typename _Compare , typename _Alloc > iterator std::multimap< _Key, _Tp, _Compare, _Alloc >::find (const key_type & *__x*) [inline]

Tries to locate an element in a multimap.

Parameters

__x	Key of (key, value) pair to be located.

Returns

Iterator pointing to sought-after element, or end() if not found.

This function takes a key and tries to locate the element with which the key matches. If successful the function returns an iterator pointing to the sought after pair. If unsuccessful it returns the past-the-end (`end()`) iterator.

Definition at line 843 of file stl_multimap.h.

4.724.3.24 template<typename _Key , typename _Tp , typename _Compare , typename _Alloc > template<typename _Kt > auto std::multimap< _Key, _Tp, _Compare, _Alloc >::find (const _Kt & *__x*) -> decltype(_M_t._M_find_tr(__x)) [inline]

Tries to locate an element in a multimap.

Parameters

__x	Key of (key, value) pair to be located.

Returns

Iterator pointing to sought-after element, or end() if not found.

This function takes a key and tries to locate the element with which the key matches. If successful the function returns an iterator pointing to the sought after pair. If unsuccessful it returns the past-the-end (`end()`) iterator.

Definition at line 849 of file stl_multimap.h.

4.724.3.25 template<typename _Key , typename _Tp , typename _Compare , typename _Alloc > const_iterator std::multimap< _Key, _Tp, _Compare, _Alloc >::find (const key_type & *__x*) const [inline]

Tries to locate an element in a multimap.

Parameters

__x	Key of (key, value) pair to be located.

Returns

Read-only (constant) iterator pointing to sought-after element, or end() if not found.

This function takes a key and tries to locate the element with which the key matches. If successful the function returns a constant iterator pointing to the sought after pair. If unsuccessful it returns the past-the-end (`end()`) iterator.

Definition at line 867 of file stl_multimap.h.

4.724.3.26 template<typename _Key , typename _Tp , typename _Compare , typename _Alloc > template<typename _Kt > auto std::multimap< _Key, _Tp, _Compare, _Alloc >::find (const _Kt & *__x*) const -> decltype(_M_t._M_find_tr(__x)) [inline]

Tries to locate an element in a multimap.

Parameters

__x	Key of (key, value) pair to be located.

Returns

Read-only (constant) iterator pointing to sought-after element, or end() if not found.

This function takes a key and tries to locate the element with which the key matches. If successful the function returns a constant iterator pointing to the sought after pair. If unsuccessful it returns the past-the-end (`end()`) iterator.

Definition at line 873 of file stl_multimap.h.

4.724.3.27 template<typename _Key , typename _Tp , typename _Compare , typename _Alloc > allocator_type std::multimap< _Key, _Tp, _Compare, _Alloc >::get_allocator ( ) const [inline], [noexcept]

Get a copy of the memory allocation object.

Definition at line 341 of file stl_multimap.h.

4.724.3.28 template<typename _Key , typename _Tp , typename _Compare , typename _Alloc > iterator std::multimap< _Key, _Tp, _Compare, _Alloc >::insert (const value_type & *__x*) [inline]

Inserts a std::pair into the multimap.

Parameters

__x	Pair to be inserted (see std::make_pair for easy creation of pairs).

Returns

An iterator that points to the inserted (key,value) pair.

This function inserts a (key, value) pair into the multimap. Contrary to a std::map the multimap does not rely on unique keys and thus multiple pairs with the same key can be inserted.

Insertion requires logarithmic time.

Definition at line 539 of file stl_multimap.h.

Referenced by std::multimap< _Key, _Tp, _Compare, _Alloc >::insert().

4.724.3.29 template<typename _Key , typename _Tp , typename _Compare , typename _Alloc > iterator std::multimap< _Key, _Tp, _Compare, _Alloc >::insert (value_type && *__x*) [inline]

Inserts a std::pair into the multimap.

Parameters

__x	Pair to be inserted (see std::make_pair for easy creation of pairs).

Returns

An iterator that points to the inserted (key,value) pair.

This function inserts a (key, value) pair into the multimap. Contrary to a std::map the multimap does not rely on unique keys and thus multiple pairs with the same key can be inserted.

Insertion requires logarithmic time.

Definition at line 546 of file stl_multimap.h.

References std::move().

4.724.3.30 template<typename _Key , typename _Tp , typename _Compare , typename _Alloc > template<typename _Pair > __enable_if_t<is_constructible<value_type, _Pair>::value, iterator> std::multimap< _Key, _Tp, _Compare, _Alloc >::insert (_Pair && __x) [inline]

Inserts a std::pair into the multimap.

Parameters

__x	Pair to be inserted (see std::make_pair for easy creation of pairs).

Returns

An iterator that points to the inserted (key,value) pair.

This function inserts a (key, value) pair into the multimap. Contrary to a std::map the multimap does not rely on unique keys and thus multiple pairs with the same key can be inserted.

Insertion requires logarithmic time.

Definition at line 551 of file stl_multimap.h.

4.724.3.31 template<typename _Key , typename _Tp , typename _Compare , typename _Alloc > iterator std::multimap< _Key, _Tp, _Compare, _Alloc >::insert (const_iterator *__position,* const value_type & *__x*) [inline]

Inserts a std::pair into the multimap.

Parameters

__position	An iterator that serves as a hint as to where the pair should be inserted.
__x	Pair to be inserted (see std::make_pair for easy creation of pairs).

Returns

An iterator that points to the inserted (key,value) pair.

This function inserts a (key, value) pair into the multimap. Contrary to a std::map the multimap does not rely on unique keys and thus multiple pairs with the same key can be inserted. Note that the first parameter is only a hint and can potentially improve the performance of the insertion process. A bad hint would cause no gains in efficiency.

For more on *hinting*, see: https://gcc.gnu.org/onlinedocs/libstdc++/manual/associative.html#containers.associative.insert_hints

Insertion requires logarithmic time (if the hint is not taken).

Definition at line 579 of file stl_multimap.h.

4.724.3.32 template<typename _Key , typename _Tp , typename _Compare , typename _Alloc > iterator std::multimap< _Key, _Tp, _Compare, _Alloc >::insert (const_iterator *__position,* value_type && *__x*) [inline]

Inserts a std::pair into the multimap.

Parameters

__position	An iterator that serves as a hint as to where the pair should be inserted.
__x	Pair to be inserted (see std::make_pair for easy creation of pairs).

Returns

An iterator that points to the inserted (key,value) pair.

This function inserts a (key, value) pair into the multimap. Contrary to a std::map the multimap does not rely on unique keys and thus multiple pairs with the same key can be inserted. Note that the first parameter is only a hint and can potentially improve the performance of the insertion process. A bad hint would cause no gains in efficiency.

For more on *hinting*, see: https://gcc.gnu.org/onlinedocs/libstdc++/manual/associative.html#containers.associative.insert_hints

Insertion requires logarithmic time (if the hint is not taken).

Definition at line 589 of file stl_multimap.h.

References std::move().

4.724.3.33 template<typename _Key , typename _Tp , typename _Compare , typename _Alloc > template<typename _Pair > __enable_if_t<is_constructible<value_type, _Pair&&>::value, iterator> std::multimap< _Key, _Tp, _Compare, _Alloc >::insert (const_iterator *__position,* _Pair && *__x*) [inline]

Inserts a std::pair into the multimap.

Parameters

__position	An iterator that serves as a hint as to where the pair should be inserted.
__x	Pair to be inserted (see std::make_pair for easy creation of pairs).

Returns

An iterator that points to the inserted (key,value) pair.

This function inserts a (key, value) pair into the multimap. Contrary to a std::map the multimap does not rely on unique keys and thus multiple pairs with the same key can be inserted. Note that the first parameter is only a hint and can potentially improve the performance of the insertion process. A bad hint would cause no gains in efficiency.

For more on *hinting*, see: https://gcc.gnu.org/onlinedocs/libstdc++/manual/associative.html#containers.associative.insert_hints

Insertion requires logarithmic time (if the hint is not taken).

Definition at line 594 of file stl_multimap.h.

4.724.3.34 template<typename _Key , typename _Tp , typename _Compare , typename _Alloc > template<typename _InputIterator > void std::multimap< _Key, _Tp, _Compare, _Alloc >::insert (_InputIterator *__first,* _InputIterator *__last*) [inline]

A template function that attempts to insert a range of elements.

Parameters

__first	Iterator pointing to the start of the range to be inserted.
__last	Iterator pointing to the end of the range.

Complexity similar to that of the range constructor.

Definition at line 613 of file stl_multimap.h.

4.724.3.35 template<typename _Key , typename _Tp , typename _Compare , typename _Alloc > void std::multimap< _Key, _Tp, _Compare, _Alloc >::insert (initializer_list< value_type > *__l*) [inline]

Attempts to insert a list of std::pairs into the multimap.

Parameters

__l	A std::initializer_list<value_type> of pairs to be inserted.

Complexity similar to that of the range constructor.

Definition at line 625 of file stl_multimap.h.

References std::multimap< _Key, _Tp, _Compare, _Alloc >::insert().

4.724.3.36 template<typename _Key , typename _Tp , typename _Compare , typename _Alloc > key_compare std::multimap< _Key, _Tp, _Compare, _Alloc >::key_comp ( ) const [inline]

Returns the key comparison object out of which the multimap was constructed.

Definition at line 817 of file stl_multimap.h.

4.724.3.37 template<typename _Key , typename _Tp , typename _Compare , typename _Alloc > iterator std::multimap< _Key, _Tp, _Compare, _Alloc >::lower_bound (const key_type & __x) [inline]

Finds the beginning of a subsequence matching given key.

Parameters

__x	Key of (key, value) pair to be located.

Returns

Iterator pointing to first element equal to or greater than key, or end().

This function returns the first element of a subsequence of elements that matches the given key. If unsuccessful it returns an iterator pointing to the first element that has a greater value than given key or end() if no such element exists.

Definition at line 928 of file stl_multimap.h.

4.724.3.38 template<typename _Key , typename _Tp , typename _Compare , typename _Alloc > template<typename _Kt > auto std::multimap< _Key, _Tp, _Compare, _Alloc >::lower_bound (const _Kt & __x) -> decltype(iterator(_M_t._M_lower_bound_tr(__x))) [inline]

Finds the beginning of a subsequence matching given key.

Parameters

__x	Key of (key, value) pair to be located.

Returns

Iterator pointing to first element equal to or greater than key, or end().

This function returns the first element of a subsequence of elements that matches the given key. If unsuccessful it returns an iterator pointing to the first element that has a greater value than given key or end() if no such element exists.

Definition at line 934 of file stl_multimap.h.

4.724.3.39 template<typename _Key , typename _Tp , typename _Compare , typename _Alloc > const_iterator std::multimap< _Key, _Tp, _Compare, _Alloc >::lower_bound (const key_type & __x) const [inline]

Finds the beginning of a subsequence matching given key.

Parameters

__x	Key of (key, value) pair to be located.

Returns

Read-only (constant) iterator pointing to first element equal to or greater than key, or end().

This function returns the first element of a subsequence of elements that matches the given key. If unsuccessful the iterator will point to the next greatest element or, if no such greater element exists, to end().

Definition at line 953 of file stl_multimap.h.

4.724.3.40 template<typename _Key , typename _Tp , typename _Compare , typename _Alloc > template<typename _Kt > auto std::multimap< _Key, _Tp, _Compare, _Alloc >::lower_bound (const _Kt & __x) const -> decltype(const_iterator(_M_t._M_lower_bound_tr(__x))) [inline]

Finds the beginning of a subsequence matching given key.

Parameters

__x	Key of (key, value) pair to be located.

Returns

Read-only (constant) iterator pointing to first element equal to or greater than key, or end().

This function returns the first element of a subsequence of elements that matches the given key. If unsuccessful the iterator will point to the next greatest element or, if no such greater element exists, to end().

Definition at line 959 of file stl_multimap.h.

4.724.3.41 template<typename _Key , typename _Tp , typename _Compare , typename _Alloc > size_type std::multimap< _Key, _Tp, _Compare, _Alloc >::max_size ( ) const [inline], [noexcept]

Returns the maximum size of the multimap.

Definition at line 468 of file stl_multimap.h.

4.724.3.42 template<typename _Key , typename _Tp , typename _Compare , typename _Alloc > multimap& std::multimap< _Key, _Tp, _Compare, _Alloc >::operator= (const multimap< _Key, _Tp, _Compare, _Alloc > &) [default]

Multimap assignment operator.

Whether the allocator is copied depends on the allocator traits.

4.724.3.43 template<typename _Key , typename _Tp , typename _Compare , typename _Alloc > multimap& std::multimap< _Key, _Tp, _Compare, _Alloc >::operator= (multimap< _Key, _Tp, _Compare, _Alloc > &&) [default]

Move assignment operator.

4.724.3.44 template<typename _Key , typename _Tp , typename _Compare , typename _Alloc > multimap& std::multimap< _Key, _Tp, _Compare, _Alloc >::operator= (initializer_list< value_type > __l) [inline]

Multimap list assignment operator.

Parameters

__l	An initializer_list.

This function fills a multimap with copies of the elements in the initializer list __l.

Note that the assignment completely changes the multimap and that the resulting multimap's size is the same as the number of elements assigned.

Definition at line 332 of file stl_multimap.h.

4.724.3.45 template<typename _Key , typename _Tp , typename _Compare , typename _Alloc > reverse_iterator std::multimap< _Key, _Tp, _Compare, _Alloc >::rbegin ( ) [inline], [noexcept]

Returns a read/write reverse iterator that points to the last pair in the multimap. Iteration is done in descending order according to the keys.

Definition at line 387 of file stl_multimap.h.

4.724.3.46 template<typename _Key , typename _Tp , typename _Compare , typename _Alloc > const_reverse_iterator std::multimap< _Key, _Tp, _Compare, _Alloc >::rbegin ( ) const [inline], [noexcept]

Returns a read-only (constant) reverse iterator that points to the last pair in the multimap. Iteration is done in descending order according to the keys.

Definition at line 396 of file stl_multimap.h.

4.724.3.47 template<typename _Key , typename _Tp , typename _Compare , typename _Alloc > reverse_iterator std::multimap< _Key, _Tp, _Compare, _Alloc >::rend ( ) [inline], [noexcept]

Returns a read/write reverse iterator that points to one before the first pair in the multimap. Iteration is done in descending order according to the keys.

Definition at line 405 of file stl_multimap.h.

4.724.3.48 template<typename _Key , typename _Tp , typename _Compare , typename _Alloc > const_reverse_iterator std::multimap< _Key, _Tp, _Compare, _Alloc >::rend ( ) const [inline], [noexcept]

Returns a read-only (constant) reverse iterator that points to one before the first pair in the multimap. Iteration is done in descending order according to the keys.

Definition at line 414 of file stl_multimap.h.

4.724.3.49 template<typename _Key , typename _Tp , typename _Compare , typename _Alloc > size_type std::multimap< _Key, _Tp, _Compare, _Alloc >::size ( ) const [inline], [noexcept]

Returns the size of the multimap.

Definition at line 463 of file stl_multimap.h.

4.724.3.50 template<typename _Key , typename _Tp , typename _Compare , typename _Alloc > void std::multimap< _Key, _Tp, _Compare, _Alloc >::swap (multimap< _Key, _Tp, _Compare, _Alloc > & __x) [inline], [noexcept]

Swaps data with another multimap.

Parameters

__x	A multimap of the same element and allocator types.

This exchanges the elements between two multimaps in constant time. (It is only swapping a pointer, an integer, and an instance of the `Compare` type (which itself is often stateless and empty), so it should be quite fast.) Note that the global std::swap() function is specialized such that std::swap(m1,m2) will feed to this function.

Whether the allocators are swapped depends on the allocator traits.

Definition at line 797 of file stl_multimap.h.

4.724.3.51 template<typename _Key , typename _Tp , typename _Compare , typename _Alloc > iterator std::multimap< _Key, _Tp, _Compare, _Alloc >::upper_bound (const key_type & __x) [inline]

Finds the end of a subsequence matching given key.

Parameters

__x	Key of (key, value) pair to be located.

Returns

Iterator pointing to the first element greater than key, or end().

Definition at line 973 of file stl_multimap.h.

4.724.3.52 template<typename _Key , typename _Tp , typename _Compare , typename _Alloc > template<typename _Kt > auto std::multimap< _Key, _Tp, _Compare, _Alloc >::upper_bound (const _Kt & __x) -> decltype(iterator(_M_t._M_upper_bound_tr(__x))) [inline]

Finds the end of a subsequence matching given key.

Parameters

__x	Key of (key, value) pair to be located.

Returns

Iterator pointing to the first element greater than key, or end().

Definition at line 979 of file stl_multimap.h.

4.724.3.53 template<typename _Key , typename _Tp , typename _Compare , typename _Alloc > const_iterator std::multimap< _Key, _Tp, _Compare, _Alloc >::upper_bound (const key_type & __x) const [inline]

Finds the end of a subsequence matching given key.

Parameters

__x	Key of (key, value) pair to be located.

Returns

Read-only (constant) iterator pointing to first iterator greater than key, or end().

Definition at line 993 of file stl_multimap.h.

4.724.3.54 template<typename _Key , typename _Tp , typename _Compare , typename _Alloc > template<typename _Kt > auto std::multimap< _Key, _Tp, _Compare, _Alloc >::upper_bound (const _Kt & __x) const -> decltype(const_iterator(_M_t._M_upper_bound_tr(__x))) [inline]

Finds the end of a subsequence matching given key.

Parameters

__x	Key of (key, value) pair to be located.

Returns

Read-only (constant) iterator pointing to first iterator greater than key, or end().

Definition at line 999 of file stl_multimap.h.

4.724.3.55 template<typename _Key , typename _Tp , typename _Compare , typename _Alloc > value_compare std::multimap< _Key, _Tp, _Compare, _Alloc >::value_comp ( ) const [inline]

Returns a value comparison object, built from the key comparison object out of which the multimap was constructed.

Definition at line 825 of file stl_multimap.h.

4.727.1 Detailed Description

template<typename _Key, typename _Compare = std::less<_Key>, typename _Alloc = std::allocator<_Key>>class std::multiset< _Key, _Compare, _Alloc >

A standard container made up of elements, which can be retrieved in logarithmic time.

Template Parameters

_Key	Type of key objects.
_Compare	Comparison function object type, defaults to less<_Key>.
_Alloc	Allocator type, defaults to allocator<_Key>.

Meets the requirements of a `container`, a `reversible container`, and an `associative container` (using equivalent keys). For a `multiset<Key>` the key_type and value_type are Key.

Multisets support bidirectional iterators.

The private tree data is declared exactly the same way for set and multiset; the distinction is made entirely in how the tree functions are called (*_unique versus *_equal, same as the standard).

Definition at line 96 of file stl_multiset.h.

4.727.2 Constructor & Destructor Documentation

4.727.2.1 template<typename _Key, typename _Compare = std::less<_Key>, typename _Alloc = std::allocator<_Key>> std::multiset< _Key, _Compare, _Alloc >::multiset ( ) [default]

Default constructor creates no elements.

4.727.2.2 template<typename _Key, typename _Compare = std::less<_Key>, typename _Alloc = std::allocator<_Key>> std::multiset< _Key, _Compare, _Alloc >::multiset (const _Compare & *__comp*, const allocator_type & *__a* = allocator_type()) [inline], [explicit]

Creates a multiset with no elements.

Parameters

__comp	Comparator to use.
__a	An allocator object.

Definition at line 173 of file stl_multiset.h.

4.727.2.3 template<typename _Key, typename _Compare = std::less<_Key>, typename _Alloc = std::allocator<_Key>> template<typename _InputIterator > std::multiset< _Key, _Compare, _Alloc >::multiset (_InputIterator *__first,* _InputIterator *__last*) [inline]

Builds a multiset from a range.

Parameters

__first	An input iterator.
__last	An input iterator.

Create a multiset consisting of copies of the elements from [first,last). This is linear in N if the range is already sorted, and NlogN otherwise (where N is distance(__first,__last)).

Definition at line 187 of file stl_multiset.h.

4.727.2.4 template<typename _Key, typename _Compare = std::less<_Key>, typename _Alloc = std::allocator<_Key>> template<typename _InputIterator > std::multiset< _Key, _Compare, _Alloc >::multiset (_InputIterator *__first,* _InputIterator *__last,* const _Compare & *__comp,* const allocator_type & *__a =* allocator_type()) [inline]

Builds a multiset from a range.

Parameters

__first	An input iterator.
__last	An input iterator.
__comp	A comparison functor.
__a	An allocator object.

Create a multiset consisting of copies of the elements from [__first,__last). This is linear in N if the range is already sorted, and NlogN otherwise (where N is distance(__first,__last)).

Definition at line 203 of file stl_multiset.h.

4.727.2.5 template<typename _Key, typename _Compare = std::less<_Key>, typename _Alloc = std::allocator<_Key>> std::multiset< _Key, _Compare, _Alloc >::multiset (const multiset< _Key, _Compare, _Alloc > &) [default]

Multiset copy constructor.

Whether the allocator is copied depends on the allocator traits.

4.727.2.6 template<typename _Key, typename _Compare = std::less<_Key>, typename _Alloc = std::allocator<_Key>> std::multiset< _Key, _Compare, _Alloc >::multiset (multiset< _Key, _Compare, _Alloc > &&) [default]

Multiset move constructor.

The newly-created multiset contains the exact contents of the moved instance. The moved instance is a valid, but unspecified multiset.

4.727.2.7 template<typename _Key, typename _Compare = std::less<_Key>, typename _Alloc = std::allocator<_Key>> std::multiset< _Key, _Compare, _Alloc >::multiset (initializer_list< value_type > __l, const _Compare & __comp = _Compare(), const allocator_type & __a = allocator_type()) [inline]

Builds a multiset from an initializer_list.

Parameters

__l	An initializer_list.
__comp	A comparison functor.
__a	An allocator object.

Create a multiset consisting of copies of the elements from the list. This is linear in N if the list is already sorted, and NlogN otherwise (where N is *__l.size()*).

Definition at line 239 of file stl_multiset.h.

4.727.2.8 template<typename _Key, typename _Compare = std::less<_Key>, typename _Alloc = std::allocator<_Key>> std::multiset< _Key, _Compare, _Alloc >::multiset (const allocator_type & *__a*) [inline], [explicit]

Allocator-extended default constructor.

Definition at line 247 of file stl_multiset.h.

4.727.2.9 template<typename _Key, typename _Compare = std::less<_Key>, typename _Alloc = std::allocator<_Key>> std::multiset< _Key, _Compare, _Alloc >::multiset (const multiset< _Key, _Compare, _Alloc > & *__m,* const allocator_type & *__a*) [inline]

Allocator-extended copy constructor.

Definition at line 251 of file stl_multiset.h.

4.727.2.10 template<typename _Key, typename _Compare = std::less<_Key>, typename _Alloc = std::allocator<_Key>> std::multiset< _Key, _Compare, _Alloc >::multiset (multiset< _Key, _Compare, _Alloc > && *__m,* const allocator_type & *__a*) [inline], [noexcept]

Allocator-extended move constructor.

Definition at line 255 of file stl_multiset.h.

4.727.2.11 template<typename _Key, typename _Compare = std::less<_Key>, typename _Alloc = std::allocator<_Key>> std::multiset< _Key, _Compare, _Alloc >::multiset (initializer_list< value_type > *__l,* const allocator_type & *__a*) [inline]

Allocator-extended initialier-list constructor.

Definition at line 261 of file stl_multiset.h.

4.727.2.12 template<typename _Key, typename _Compare = std::less<_Key>, typename _Alloc = std::allocator<_Key>> template<typename _InputIterator > std::multiset< _Key, _Compare, _Alloc >::multiset (_InputIterator *__first,* _InputIterator *__last,* const allocator_type & *__a*) [inline]

Allocator-extended range constructor.

Definition at line 267 of file stl_multiset.h.

4.727.2.13 template<typename _Key, typename _Compare = std::less<_Key>, typename _Alloc = std::allocator<_Key>> std::multiset< _Key, _Compare, _Alloc >::~multiset ( ) [default]

The dtor only erases the elements, and note that if the elements themselves are pointers, the pointed-to memory is not touched in any way. Managing the pointer is the user's responsibility.

4.727.3 Member Function Documentation

4.727.3.1 template<typename _Key, typename _Compare = std::less<_Key>, typename _Alloc = std::allocator<_Key>> iterator std::multiset< _Key, _Compare, _Alloc >::begin ( ) const [inline], [noexcept]

Returns a read-only (constant) iterator that points to the first element in the multiset. Iteration is done in ascending order according to the keys.

Definition at line 340 of file stl_multiset.h.

4.727.3.2 template<typename _Key, typename _Compare = std::less<_Key>, typename _Alloc = std::allocator<_Key>> iterator std::multiset< _Key, _Compare, _Alloc >::cbegin ( ) const [inline], [noexcept]

Returns a read-only (constant) iterator that points to the first element in the multiset. Iteration is done in ascending order according to the keys.

Definition at line 377 of file stl_multiset.h.

4.727.3.3 template<typename _Key, typename _Compare = std::less<_Key>, typename _Alloc = std::allocator<_Key>> iterator std::multiset< _Key, _Compare, _Alloc >::cend ( ) const [inline], [noexcept]

Returns a read-only (constant) iterator that points one past the last element in the multiset. Iteration is done in ascending order according to the keys.

Definition at line 386 of file stl_multiset.h.

4.727.3.4 template<typename _Key, typename _Compare = std::less<_Key>, typename _Alloc = std::allocator<_Key>> void std::multiset< _Key, _Compare, _Alloc >::clear ( ) [inline], [noexcept]

Erases all elements in a multiset. Note that this function only erases the elements, and that if the elements themselves are pointers, the pointed-to memory is not touched in any way. Managing the pointer is the user's responsibility.

Definition at line 718 of file stl_multiset.h.

4.727.3.5 template<typename _Key, typename _Compare = std::less<_Key>, typename _Alloc = std::allocator<_Key>> size_type std::multiset< _Key, _Compare, _Alloc >::count (const key_type & __x) const [inline]

Finds the number of elements with given key.

Parameters

__x	Key of elements to be located.

Returns

Number of elements with specified key.

Definition at line 730 of file stl_multiset.h.

4.727.3.6 template<typename _Key, typename _Compare = std::less<_Key>, typename _Alloc = std::allocator<_Key>> template<typename _Kt > auto std::multiset< _Key, _Compare, _Alloc >::count (const _Kt & __x) const -> decltype(_M_t._M_count_tr(__x)) [inline]

Finds the number of elements with given key.

Parameters

__x	Key of elements to be located.

Returns

Number of elements with specified key.

Definition at line 736 of file stl_multiset.h.

4.727.3.7 template<typename _Key, typename _Compare = std::less<_Key>, typename _Alloc = std::allocator<_Key>> reverse_iterator std::multiset< _Key, _Compare, _Alloc >::crbegin ( ) const [inline], [noexcept]

Returns a read-only (constant) reverse iterator that points to the last element in the multiset. Iteration is done in descending order according to the keys.

Definition at line 395 of file stl_multiset.h.

4.727.3.8 template<typename _Key, typename _Compare = std::less<_Key>, typename _Alloc = std::allocator<_Key>> reverse_iterator std::multiset< _Key, _Compare, _Alloc >::crend ( ) const [inline], [noexcept]

Returns a read-only (constant) reverse iterator that points to the last element in the multiset. Iteration is done in descending order according to the keys.

Definition at line 404 of file stl_multiset.h.

4.727.3.9 template<typename _Key, typename _Compare = std::less<_Key>, typename _Alloc = std::allocator<_Key>> template<typename... _Args> iterator std::multiset< _Key, _Compare, _Alloc >::emplace (_Args &&... *__args*) [inline]

Builds and inserts an element into the multiset.

Parameters

__args	Arguments used to generate the element instance to be inserted.

Returns

An iterator that points to the inserted element.

This function inserts an element into the multiset. Contrary to a std::set the multiset does not rely on unique keys and thus multiple copies of the same element can be inserted.

Insertion requires logarithmic time.

Definition at line 457 of file stl_multiset.h.

4.727.3.10 template<typename _Key, typename _Compare = std::less<_Key>, typename _Alloc = std::allocator<_Key>> template<typename... _Args> iterator std::multiset< _Key, _Compare, _Alloc >::emplace_hint (const_iterator *__pos,* _Args &&... *__args*) [inline]

Builds and inserts an element into the multiset.

Parameters

__pos	An iterator that serves as a hint as to where the element should be inserted.
__args	Arguments used to generate the element instance to be inserted.

Returns

An iterator that points to the inserted element.

This function inserts an element into the multiset. Contrary to a std::set the multiset does not rely on unique keys and thus multiple copies of the same element can be inserted.

Note that the first parameter is only a hint and can potentially improve the performance of the insertion process. A bad hint would cause no gains in efficiency.

See https://gcc.gnu.org/onlinedocs/libstdc++/manual/associative.html#containers.associative.insert_hints for more on *hinting*.

Insertion requires logarithmic time (if the hint is not taken).

Definition at line 483 of file stl_multiset.h.

4.727.3.11 template<typename _Key, typename _Compare = std::less<_Key>, typename _Alloc = std::allocator<_Key>> bool std::multiset< _Key, _Compare, _Alloc >::empty ( ) const [inline], [noexcept]

Returns true if the set is empty.

Definition at line 410 of file stl_multiset.h.

4.727.3.12 template<typename _Key, typename _Compare = std::less<_Key>, typename _Alloc = std::allocator<_Key>> iterator std::multiset< _Key, _Compare, _Alloc >::end ( ) const [inline], [noexcept]

Returns a read-only (constant) iterator that points one past the last element in the multiset. Iteration is done in ascending order according to the keys.

Definition at line 349 of file stl_multiset.h.

4.727.3.13 template<typename _Key, typename _Compare = std::less<_Key>, typename _Alloc = std::allocator<_Key>> std::pair<iterator, iterator> std::multiset< _Key, _Compare, _Alloc >::equal_range (const key_type & __x) [inline]

Finds a subsequence matching given key.

Parameters

__x	Key to be located.

Returns

Pair of iterators that possibly points to the subsequence matching given key.

This function is equivalent to

```
std::make_pair(c.lower_bound(val),
               c.upper_bound(val))
```

(but is faster than making the calls separately).

This function probably only makes sense for multisets.

Definition at line 879 of file stl_multiset.h.

4.727.3.14 template<typename _Key, typename _Compare = std::less<_Key>, typename _Alloc = std::allocator<_Key>> std::pair<const_iterator, const_iterator> std::multiset< _Key, _Compare, _Alloc >::equal_range (const key_type & __x) const [inline]

Finds a subsequence matching given key.

Parameters

__x	Key to be located.

Returns

Pair of iterators that possibly points to the subsequence matching given key.

This function is equivalent to

```
std::make_pair(c.lower_bound(val),
               c.upper_bound(val))
```

(but is faster than making the calls separately).

This function probably only makes sense for multisets.

Definition at line 883 of file stl_multiset.h.

4.727.3.15 template<typename _Key, typename _Compare = std::less<_Key>, typename _Alloc = std::allocator<_Key>> template<typename _Kt > auto std::multiset< _Key, _Compare, _Alloc >::equal_range (const _Kt & *__x*) -> decltype(pair<iterator, iterator>(_M_t._M_equal_range_tr(__x))) [inline]

Finds a subsequence matching given key.

Parameters

__x	Key to be located.

Returns

Pair of iterators that possibly points to the subsequence matching given key.

This function is equivalent to

```
std::make_pair(c.lower_bound(val),
               c.upper_bound(val))
```

(but is faster than making the calls separately).

This function probably only makes sense for multisets.

Definition at line 889 of file stl_multiset.h.

4.727.3.16 template<typename _Key, typename _Compare = std::less<_Key>, typename _Alloc = std::allocator<_Key>> template<typename _Kt > auto std::multiset< _Key, _Compare, _Alloc >::equal_range (const _Kt & *__x*) const -> decltype(pair<iterator, iterator>(_M_t._M_equal_range_tr(__x))) [inline]

Finds a subsequence matching given key.

Parameters

__x	Key to be located.

Returns

Pair of iterators that possibly points to the subsequence matching given key.

This function is equivalent to

```
std::make_pair(c.lower_bound(val),
               c.upper_bound(val))
```

(but is faster than making the calls separately).

This function probably only makes sense for multisets.

Definition at line 895 of file stl_multiset.h.

4.727.3.17 template<typename _Key, typename _Compare = std::less<_Key>, typename _Alloc = std::allocator<_Key>> _GLIBCXX_ABI_TAG_CXX11 iterator std::multiset< _Key, _Compare, _Alloc >::erase (const_iterator *__position*) [inline]

Erases an element from a multiset.

Parameters

__position	An iterator pointing to the element to be erased.

Returns

An iterator pointing to the element immediately following *position* prior to the element being erased. If no such element exists, end() is returned.

This function erases an element, pointed to by the given iterator, from a multiset. Note that this function only erases the element, and that if the element is itself a pointer, the pointed-to memory is not touched in any way. Managing the pointer is the user's responsibility.

Definition at line 639 of file stl_multiset.h.

4.727.3.18 template<typename _Key, typename _Compare = std::less<_Key>, typename _Alloc = std::allocator<_Key>> size_type std::multiset< _Key, _Compare, _Alloc >::erase (const key_type & *__x*) [inline]

Erases elements according to the provided key.

Parameters

__x	Key of element to be erased.

Returns

The number of elements erased.

This function erases all elements located by the given key from a multiset. Note that this function only erases the element, and that if the element is itself a pointer, the pointed-to memory is not touched in any way. Managing the pointer is the user's responsibility.

Definition at line 669 of file stl_multiset.h.

4.727.3.19 template<typename _Key, typename _Compare = std::less<_Key>, typename _Alloc = std::allocator<_Key>> _GLIBCXX_ABI_TAG_CXX11 iterator std::multiset< _Key, _Compare, _Alloc >::erase (const_iterator *__first*, const_iterator *__last*) [inline]

Erases a [first,last) range of elements from a multiset.

Parameters

__first	Iterator pointing to the start of the range to be erased.
__last	Iterator pointing to the end of the range to be erased.

Returns

The iterator *last*.

This function erases a sequence of elements from a multiset. Note that this function only erases the elements, and that if the elements themselves are pointers, the pointed-to memory is not touched in any way. Managing the pointer is the user's responsibility.

Definition at line 691 of file stl_multiset.h.

4.727.3.20 template<typename _Key, typename _Compare = std::less<_Key>, typename _Alloc = std::allocator<_Key>> iterator std::multiset< _Key, _Compare, _Alloc >::find (const key_type & __x) [inline]

Tries to locate an element in a set.

Parameters

__x	Element to be located.

Returns

Iterator pointing to sought-after element, or end() if not found.

This function takes a key and tries to locate the element with which the key matches. If successful the function returns an iterator pointing to the sought after element. If unsuccessful it returns the past-the-end (`end()`) iterator.

Definition at line 775 of file stl_multiset.h.

4.727.3.21 template<typename _Key, typename _Compare = std::less<_Key>, typename _Alloc = std::allocator<_Key>> const_iterator std::multiset< _Key, _Compare, _Alloc >::find (const key_type & __x) const [inline]

Tries to locate an element in a set.

Parameters

__x	Element to be located.

Returns

Iterator pointing to sought-after element, or end() if not found.

This function takes a key and tries to locate the element with which the key matches. If successful the function returns an iterator pointing to the sought after element. If unsuccessful it returns the past-the-end (`end()`) iterator.

Definition at line 779 of file stl_multiset.h.

4.727.3.22 template<typename _Key, typename _Compare = std::less<_Key>, typename _Alloc = std::allocator<_Key>> template<typename _Kt > auto std::multiset< _Key, _Compare, _Alloc >::find (const _Kt & __x) -> decltype(iterator [inline]

Tries to locate an element in a set.

Parameters

__x	Element to be located.

Returns

Iterator pointing to sought-after element, or end() if not found.

This function takes a key and tries to locate the element with which the key matches. If successful the function returns an iterator pointing to the sought after element. If unsuccessful it returns the past-the-end (`end()`) iterator.

Definition at line 785 of file stl_multiset.h.

4.727.3.23 template<typename _Key, typename _Compare = std::less<_Key>, typename _Alloc = std::allocator<_Key>> template<typename _Kt > auto std::multiset< _Key, _Compare, _Alloc >::find (const _Kt & __x) const -> decltype(const_iterator [inline]

Tries to locate an element in a set.

Parameters

__x	Element to be located.

Returns

Iterator pointing to sought-after element, or end() if not found.

This function takes a key and tries to locate the element with which the key matches. If successful the function returns an iterator pointing to the sought after element. If unsuccessful it returns the past-the-end (`end()`) iterator.

Definition at line 791 of file stl_multiset.h.

4.727.3.24 template<typename _Key, typename _Compare = std::less<_Key>, typename _Alloc = std::allocator<_Key>> allocator_type std::multiset< _Key, _Compare, _Alloc >::get_allocator ( ) const [inline], [noexcept]

Returns the memory allocation object.

Definition at line 331 of file stl_multiset.h.

4.727.3.25 template<typename _Key, typename _Compare = std::less<_Key>, typename _Alloc = std::allocator<_Key>> iterator std::multiset< _Key, _Compare, _Alloc >::insert (const value_type & __x) [inline]

Inserts an element into the multiset.

Parameters

__x	Element to be inserted.

Returns

An iterator that points to the inserted element.

This function inserts an element into the multiset. Contrary to a std::set the multiset does not rely on unique keys and thus multiple copies of the same element can be inserted.

Insertion requires logarithmic time.

Definition at line 502 of file stl_multiset.h.

Referenced by std::multiset< _Key, _Compare, _Alloc >::insert().

4.727.3.26 template<typename _Key, typename _Compare = std::less<_Key>, typename _Alloc = std::allocator<_Key>> iterator std::multiset< _Key, _Compare, _Alloc >::insert (const_iterator *__position,* const value_type & *__x*) [inline]

Inserts an element into the multiset.

Parameters

__position	An iterator that serves as a hint as to where the element should be inserted.
__x	Element to be inserted.

Returns

An iterator that points to the inserted element.

This function inserts an element into the multiset. Contrary to a std::set the multiset does not rely on unique keys and thus multiple copies of the same element can be inserted.

Note that the first parameter is only a hint and can potentially improve the performance of the insertion process. A bad hint would cause no gains in efficiency.

See https://gcc.gnu.org/onlinedocs/libstdc++/manual/associative.html#containers.associative.insert_hints for more on *hinting*.

Insertion requires logarithmic time (if the hint is not taken).

Definition at line 532 of file stl_multiset.h.

4.727.3.27 template<typename _Key, typename _Compare = std::less<_Key>, typename _Alloc = std::allocator<_Key>> template<typename _InputIterator > void std::multiset< _Key, _Compare, _Alloc >::insert (_InputIterator *__first*, _InputIterator *__last*) [inline]

A template function that tries to insert a range of elements.

Parameters

__first	Iterator pointing to the start of the range to be inserted.
__last	Iterator pointing to the end of the range.

Complexity similar to that of the range constructor.

Definition at line 551 of file stl_multiset.h.

4.727.3.28 template<typename _Key, typename _Compare = std::less<_Key>, typename _Alloc = std::allocator<_Key>> void std::multiset< _Key, _Compare, _Alloc >::insert (initializer_list< value_type > *__l*) [inline]

Attempts to insert a list of elements into the multiset.

Parameters

__l	A std::initializer_list<value_type> of elements to be inserted.

Complexity similar to that of the range constructor.

Definition at line 563 of file stl_multiset.h.

References std::multiset< _Key, _Compare, _Alloc >::insert().

4.727.3.29 template<typename _Key, typename _Compare = std::less<_Key>, typename _Alloc = std::allocator<_Key>> key_compare std::multiset< _Key, _Compare, _Alloc >::key_comp ( ) const [inline]

Returns the comparison object.

Definition at line 323 of file stl_multiset.h.

4.727.3.30 template<typename _Key, typename _Compare = std::less<_Key>, typename _Alloc = std::allocator<_Key>> iterator std::multiset< _Key, _Compare, _Alloc >::lower_bound (const key_type & *__x*) [inline]

Finds the beginning of a subsequence matching given key.

Parameters

__x	Key to be located.

Returns

Iterator pointing to first element equal to or greater than key, or end().

This function returns the first element of a subsequence of elements that matches the given key. If unsuccessful it returns an iterator pointing to the first element that has a greater value than given key or end() if no such element exists.

Definition at line 810 of file stl_multiset.h.

4.727.3.31 template<typename _Key, typename _Compare = std::less<_Key>, typename _Alloc = std::allocator<_Key>> const_iterator std::multiset< _Key, _Compare, _Alloc >::lower_bound (const key_type & __x) const [inline]

Finds the beginning of a subsequence matching given key.

Parameters

__x	Key to be located.

Returns

Iterator pointing to first element equal to or greater than key, or end().

This function returns the first element of a subsequence of elements that matches the given key. If unsuccessful it returns an iterator pointing to the first element that has a greater value than given key or end() if no such element exists.

Definition at line 814 of file stl_multiset.h.

4.727.3.32 template<typename _Key, typename _Compare = std::less<_Key>, typename _Alloc = std::allocator<_Key>> template<typename _Kt > auto std::multiset< _Key, _Compare, _Alloc >::lower_bound (const _Kt & __x) -> decltype(iterator(_M_t._M_lower_bound_tr(__x))) [inline]

Finds the beginning of a subsequence matching given key.

Parameters

__x	Key to be located.

Returns

Iterator pointing to first element equal to or greater than key, or end().

This function returns the first element of a subsequence of elements that matches the given key. If unsuccessful it returns an iterator pointing to the first element that has a greater value than given key or end() if no such element exists.

Definition at line 820 of file stl_multiset.h.

4.727.3.33 template<typename _Key, typename _Compare = std::less<_Key>, typename _Alloc = std::allocator<_Key>> template<typename _Kt > auto std::multiset< _Key, _Compare, _Alloc >::lower_bound (const _Kt & __x) const -> decltype(iterator(_M_t._M_lower_bound_tr(__x))) [inline]

Finds the beginning of a subsequence matching given key.

Parameters

__x	Key to be located.

Returns

Iterator pointing to first element equal to or greater than key, or end().

This function returns the first element of a subsequence of elements that matches the given key. If unsuccessful it returns an iterator pointing to the first element that has a greater value than given key or end() if no such element exists.

Definition at line 826 of file stl_multiset.h.

4.727.3.34 template<typename _Key, typename _Compare = std::less<_Key>, typename _Alloc = std::allocator<_Key>> size_type std::multiset< _Key, _Compare, _Alloc >::max_size ( ) const [inline], [noexcept]

Returns the maximum size of the set.

Definition at line 420 of file stl_multiset.h.

4.727.3.35 template<typename _Key, typename _Compare = std::less<_Key>, typename _Alloc = std::allocator<_Key>> multiset& std::multiset< _Key, _Compare, _Alloc >::operator= (const multiset< _Key, _Compare, _Alloc > &) [default]

Multiset assignment operator.

Whether the allocator is copied depends on the allocator traits.

4.727.3.36 template<typename _Key, typename _Compare = std::less<_Key>, typename _Alloc = std::allocator<_Key>> multiset& std::multiset< _Key, _Compare, _Alloc >::operator= (multiset< _Key, _Compare, _Alloc > &&) [default]

Move assignment operator.

4.727.3.37 template<typename _Key, typename _Compare = std::less<_Key>, typename _Alloc = std::allocator<_Key>> multiset& std::multiset< _Key, _Compare, _Alloc >::operator= (initializer_list< value_type > __l) [inline]

Multiset list assignment operator.

Parameters

__l	An initializer_list.

This function fills a multiset with copies of the elements in the initializer list *__l*.

Note that the assignment completely changes the multiset and that the resulting multiset's size is the same as the number of elements assigned.

Definition at line 312 of file stl_multiset.h.

4.727.3.38 template<typename _Key, typename _Compare = std::less<_Key>, typename _Alloc = std::allocator<_Key>> reverse_iterator std::multiset< _Key, _Compare, _Alloc >::rbegin ( ) const [inline], [noexcept]

Returns a read-only (constant) reverse iterator that points to the last element in the multiset. Iteration is done in descending order according to the keys.

Definition at line 358 of file stl_multiset.h.

4.727.3.39 template<typename _Key, typename _Compare = std::less<_Key>, typename _Alloc = std::allocator<_Key>> reverse_iterator std::multiset< _Key, _Compare, _Alloc >::rend ( ) const [inline], [noexcept]

Returns a read-only (constant) reverse iterator that points to the last element in the multiset. Iteration is done in descending order according to the keys.

Definition at line 367 of file stl_multiset.h.

4.727.3.40 template<typename _Key, typename _Compare = std::less<_Key>, typename _Alloc = std::allocator<_Key>> size_type std::multiset< _Key, _Compare, _Alloc >::size ( ) const [inline], [noexcept]

Returns the size of the set.

Definition at line 415 of file stl_multiset.h.

4.727.3.41 template<typename _Key, typename _Compare = std::less<_Key>, typename _Alloc = std::allocator<_Key>> void std::multiset< _Key, _Compare, _Alloc >::swap (multiset< _Key, _Compare, _Alloc > & __x) [inline], [noexcept]

Swaps data with another multiset.

Parameters

__x	A multiset of the same element and allocator types.

This exchanges the elements between two multisets in constant time. (It is only swapping a pointer, an integer, and an instance of the `Compare` type (which itself is often stateless and empty), so it should be quite fast.) Note that the global std::swap() function is specialized such that std::swap(s1,s2) will feed to this function.

Whether the allocators are swapped depends on the allocator traits.

Definition at line 437 of file stl_multiset.h.

4.727.3.42 template<typename _Key, typename _Compare = std::less<_Key>, typename _Alloc = std::allocator<_Key>> iterator std::multiset< _Key, _Compare, _Alloc >::upper_bound (const key_type & __x) [inline]

Finds the end of a subsequence matching given key.

Parameters

__x	Key to be located.

Returns

Iterator pointing to the first element greater than key, or end().

Definition at line 840 of file stl_multiset.h.

4.727.3.43 template<typename _Key, typename _Compare = std::less<_Key>, typename _Alloc = std::allocator<_Key>> const_iterator std::multiset< _Key, _Compare, _Alloc >::upper_bound (const key_type & __x) const [inline]

Finds the end of a subsequence matching given key.

Parameters

__x	Key to be located.

Returns

Iterator pointing to the first element greater than key, or end().

Definition at line 844 of file stl_multiset.h.

4.727.3.44 template<typename _Key, typename _Compare = std::less<_Key>, typename _Alloc = std::allocator<_Key>> template<typename _Kt > auto std::multiset< _Key, _Compare, _Alloc >::upper_bound (const _Kt & __x) -> decltype(iterator(_M_t._M_upper_bound_tr(__x))) [inline]

Finds the end of a subsequence matching given key.

Parameters

__x	Key to be located.

Returns

Iterator pointing to the first element greater than key, or end().

Definition at line 850 of file stl_multiset.h.

4.727.3.45 template<typename _Key, typename _Compare = std::less<_Key>, typename _Alloc = std::allocator<_Key>> template<typename _Kt > auto std::multiset< _Key, _Compare, _Alloc >::upper_bound (const _Kt & __x) const -> decltype(iterator(_M_t._M_upper_bound_tr(__x))) [inline]

Finds the end of a subsequence matching given key.

Parameters

__x	Key to be located.

Returns

Iterator pointing to the first element greater than key, or end().

Definition at line 856 of file stl_multiset.h.

4.727.3.46 template<typename _Key, typename _Compare = std::less<_Key>, typename _Alloc = std::allocator<_Key>> value_compare std::multiset< _Key, _Compare, _Alloc >::value_comp ( ) const [inline]

Returns the comparison object.

Definition at line 327 of file stl_multiset.h.

The documentation for this class was generated from the following file:

4.728.1 Detailed Description

template<typename _Key, typename _Compare = std::less<_Key>, typename _Allocator = std::allocator<_Key>>class std::__debug::multiset< _Key, _Compare, _Allocator >

Class std::multiset with safety/checking/debug instrumentation.

Definition at line 44 of file multiset.h.

4.728.2 Member Function Documentation

4.728.2.1 void __gnu_debug::_Safe_sequence_base::_M_detach_all ( ) [protected], [inherited]

Detach all iterators, leaving them singular.

Referenced by __gnu_debug::_Safe_sequence_base::~_Safe_sequence_base().

4.728.2.2 void __gnu_debug::_Safe_sequence_base::_M_detach_singular ( ) [protected], [inherited]

Detach all singular iterators.

Postcondition

for all iterators i attached to this sequence, i->_M_version == _M_version.

4.728.2.3 __gnu_cxx::__mutex& __gnu_debug::_Safe_sequence_base::_M_get_mutex ( ) throw) [protected], [inherited]

For use in _Safe_sequence.

Referenced by __gnu_debug::_Safe_sequence< _Sequence >::_M_transfer_from_if().

4.728.2.4 void __gnu_debug::_Safe_sequence_base::_M_invalidate_all ( ) const [inline], [protected], [inherited]

Invalidates all iterators.

Definition at line 256 of file safe_base.h.

References __gnu_debug::_Safe_sequence_base::_M_version.

4.728.2.5 void __gnu_debug::_Safe_sequence< multiset< _Key, _Compare, _Allocator > >::_M_invalidate_if (_Predicate __pred) [inherited]

Invalidates all iterators `x` that reference this sequence, are not singular, and for which `__pred(x)` returns `true`. `__pred` will be invoked with the normal iterators nested in the safe ones.

4.728.2.6 void __gnu_debug::_Safe_sequence_base::_M_revalidate_singular ( ) [protected], [inherited]

Revalidates all attached singular iterators. This method may be used to validate iterators that were invalidated before (but for some reason, such as an exception, need to become valid again).

4.728.2.7 void __gnu_debug::_Safe_sequence_base::_M_swap (_Safe_sequence_base & __x) [protected], [noexcept], [inherited]

Swap this sequence with the given sequence. This operation also swaps ownership of the iterators, so that when the operation is complete all iterators that originally referenced one container now reference the other container.

4.728.2.8 void __gnu_debug::_Safe_sequence< multiset< _Key, _Compare, _Allocator > >::_M_transfer_from_if (_Safe_sequence< multiset< _Key, _Compare, _Allocator > > & __from, _Predicate __pred) [inherited]

Transfers all iterators `x` that reference `from` sequence, are not singular, and for which `__pred(x)` returns `true`. `__pred` will be invoked with the normal iterators nested in the safe ones.

4.728.3 Member Data Documentation

4.728.3.1 _Safe_iterator_base* __gnu_debug::_Safe_sequence_base::_M_const_iterators [inherited]

The list of constant iterators that reference this container.

Definition at line 197 of file safe_base.h.

Referenced by __gnu_debug::_Safe_sequence< _Sequence >::_M_transfer_from_if().

4.728.3.2 _Safe_iterator_base* __gnu_debug::_Safe_sequence_base::_M_iterators [inherited]

The list of mutable iterators that reference this container.

Definition at line 194 of file safe_base.h.

Referenced by __gnu_debug::_Safe_sequence< _Sequence >::_M_transfer_from_if().

4.728.3.3 unsigned int __gnu_debug::_Safe_sequence_base::_M_version [mutable], [inherited]

The container version number. This number may never be 0.

Definition at line 200 of file safe_base.h.

Referenced by __gnu_debug::_Safe_sequence_base::_M_invalidate_all().

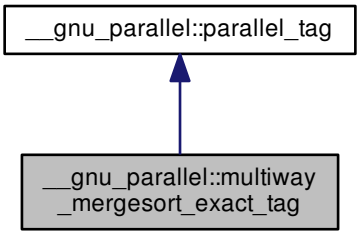
4.729 __gnu_parallel::multiway_mergesort_exact_tag Struct Reference

Inheritance diagram for __gnu_parallel::multiway_mergesort_exact_tag:



Public Member Functions

- **multiway_mergesort_exact_tag** (_ThreadIndex __num_threads)
- _ThreadIndex __get_num_threads ()
- void set_num_threads (_ThreadIndex __num_threads)

4.729.1 Detailed Description

Forces parallel sorting using multiway mergesort with exact splitting at compile time.

Definition at line 137 of file tags.h.

4.729.2 Member Function Documentation

4.729.2.1 _ThreadIndex __gnu_parallel::parallel_tag::__get_num_threads ( ) [inline], [inherited]

Find out desired number of threads.

Returns

Desired number of threads.

Definition at line 63 of file tags.h.

Referenced by __gnu_parallel::__parallel_sort().

4.729.2.2 void __gnu_parallel::parallel_tag::set_num_threads (_ThreadIndex *__num_threads*) [inline], [inherited]

Set the desired number of threads.

Parameters

__num_threads	Desired number of threads.

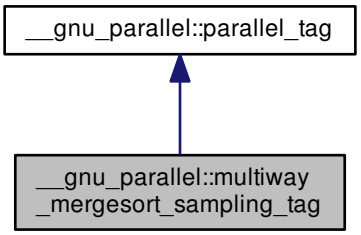
Definition at line 73 of file tags.h.

The documentation for this struct was generated from the following file:

- tags.h

4.730 __gnu_parallel::multiway_mergesort_sampling_tag Struct Reference

Inheritance diagram for __gnu_parallel::multiway_mergesort_sampling_tag:



Public Member Functions

- **multiway_mergesort_sampling_tag** (_ThreadIndex __num_threads)
- _ThreadIndex __get_num_threads ()
- void set_num_threads (_ThreadIndex __num_threads)

4.730.1 Detailed Description

Forces parallel sorting using multiway mergesort with splitting by sampling at compile time.

Definition at line 146 of file tags.h.

4.730.2 Member Function Documentation

4.730.2.1 _ThreadIndex __gnu_parallel::parallel_tag::__get_num_threads ( ) [inline],[inherited]

Find out desired number of threads.

Returns

Desired number of threads.

Definition at line 63 of file tags.h.

Referenced by __gnu_parallel::__parallel_sort().

4.730.2.2 void __gnu_parallel::parallel_tag::set_num_threads (_ThreadIndex *__num_threads*) [inline], [inherited]

Set the desired number of threads.

Parameters

__num_threads	Desired number of threads.

Definition at line 73 of file tags.h.

The documentation for this struct was generated from the following file:

  _Traits > & operator>> (std::basic_istream< _CharT, _Traits > &__is, std::negative_binomial_distribution< _-
  IntType1 > &__x)

4.735.1 Detailed Description

template<typename _IntType = int>class std::negative_binomial_distribution< _IntType >

A negative_binomial_distribution random number distribution.

The formula for the negative binomial probability mass function is $p(i) = \binom{n}{i} p^i (1-p)^{t-i}$ where t and p are the parameters of the distribution.

Definition at line 4179 of file random.h.

4.735.2 Member Typedef Documentation

4.735.2.1 template<typename _IntType = int> typedef _IntType std::negative_binomial_distribution< _IntType >::result_type

The type of the range of the distribution.

Definition at line 4182 of file random.h.

4.735.3 Member Function Documentation

4.735.3.1 template<typename _IntType = int> _IntType std::negative_binomial_distribution< _IntType >::k ( ) const [inline]

Return the k parameter of the distribution.

Definition at line 4246 of file random.h.

4.735.3.2 template<typename _IntType = int> result_type std::negative_binomial_distribution< _IntType >::max ( ) const [inline]

Returns the least upper bound value of the distribution.

Definition at line 4282 of file random.h.

References std::numeric_limits< _Tp >::max().

4.735.3.3 template<typename _IntType = int> result_type std::negative_binomial_distribution< _IntType >::min ( ) const [inline]

Returns the greatest lower bound value of the distribution.

Definition at line 4275 of file random.h.

4.735.3.4 template<typename _IntType = int> template<typename _UniformRandomNumberGenerator > result_type std::negative_binomial_distribution< _IntType >::operator() (_UniformRandomNumberGenerator & *__urng*)

Generating functions.

4.735.3.5 template<typename _IntType = int> double std::negative_binomial_distribution< _IntType >::p ( ) const [inline]

Return the p parameter of the distribution.

Definition at line 4253 of file random.h.

4.735.3.6 template<typename _IntType = int> param_type std::negative_binomial_distribution< _IntType >::param ( ) const [inline]

Returns the parameter set of the distribution.

Definition at line 4260 of file random.h.

4.735.3.7 template<typename _IntType = int> void std::negative_binomial_distribution< _IntType >::param (const param_type & *__param*) [inline]

Sets the parameter set of the distribution.

Parameters

__param	The new parameter set of the distribution.

Definition at line 4268 of file random.h.

4.735.3.8 template<typename _IntType = int> void std::negative_binomial_distribution< _IntType >::reset ( ) [inline]

Resets the distribution state.

Definition at line 4239 of file random.h.

References std::gamma_distribution< _RealType >::reset().

4.735.4 Friends And Related Function Documentation

4.735.4.1 template<typename _IntType = int> template<typename _IntType1 , typename _CharT , typename _Traits > std::basic_ostream<_CharT, _Traits>& operator<< (std::basic_ostream< _CharT, _Traits > & *__os,* const std::negative_binomial_distribution< _IntType1 > & *__x*) [friend]

Inserts a negative_binomial_distribution random number distribution __x into the output stream __os.

Parameters

__os	An output stream.
__x	A negative_binomial_distribution random number distribution.

Returns

The output stream with the state of __x inserted or in an error state.

4.735.4.2 template<typename _IntType = int> bool operator== (const negative_binomial_distribution< _IntType > & *__d1*, const negative_binomial_distribution< _IntType > & *__d2*) [friend]

Return true if two negative binomial distributions have the same parameters and the sequences that would be generated are equal.

Definition at line 4331 of file random.h.

4.735.4.3 template<typename _IntType = int> template<typename _IntType1 , typename _CharT , typename _Traits > std::basic_istream<_CharT, _Traits>& operator>> (std::basic_istream< _CharT, _Traits > & *__is*, std::negative_binomial_distribution< _IntType1 > & *__x*) [friend]

Extracts a negative_binomial_distribution random number distribution __x from the input stream __is.

Parameters

__is	An input stream.
__x	A negative_binomial_distribution random number generator engine.

Returns

The input stream with __x extracted or in an error state.

The documentation for this class was generated from the following files:

- random.h

  _Traits > & operator>> (std::basic_istream< _CharT, _Traits > &__is, std::normal_distribution< _RealType1 > &__x)

4.742.1 Detailed Description

template<typename _RealType = double>class std::normal_distribution< _RealType >

A normal continuous distribution for random numbers.

The formula for the normal probability density function is

$$p(x|\mu,\sigma) = \frac{1}{\sigma\sqrt{2\pi}} e^{-\frac{x-\mu^2}{2\sigma^2}}$$

Definition at line 1961 of file random.h.

4.742.2 Member Typedef Documentation

4.742.2.1 template<typename _RealType = double> typedef _RealType std::normal_distribution< _RealType >::result_type

The type of the range of the distribution.

Definition at line 1964 of file random.h.

4.742.3 Constructor & Destructor Documentation

4.742.3.1 template<typename _RealType = double> std::normal_distribution< _RealType >::normal_distribution (result_type *__mean,* result_type *__stddev* = result_type (1)) [inline], [explicit]

Constructs a normal distribution with parameters $mean$ and standard deviation.

Definition at line 2014 of file random.h.

4.742.4 Member Function Documentation

4.742.4.1 template<typename _RealType = double> result_type std::normal_distribution< _RealType >::max ( ) const [inline]

Returns the least upper bound value of the distribution.

Definition at line 2071 of file random.h.

4.742.4.2 template<typename _RealType = double> _RealType std::normal_distribution< _RealType >::mean ( ) const [inline]

Returns the mean of the distribution.

Definition at line 2035 of file random.h.

4.742.4.3 template<typename _RealType = double> result_type std::normal_distribution< _RealType >::min ( ) const [inline]

Returns the greatest lower bound value of the distribution.

Definition at line 2064 of file random.h.

4.742.4.4 template<typename _RealType = double> template<typename _UniformRandomNumberGenerator > normal_distribution<_RealType>::result_type std::normal_distribution< _RealType >::operator() (_UniformRandomNumberGenerator & *__urng,* const param_type & *__param*)

Polar method due to Marsaglia.

Devroye, L. Non-Uniform Random Variates Generation. Springer-Verlag, New York, 1986, Ch. V, Sect. 4.4.

Definition at line 1770 of file bits/random.tcc.

References std::log(), and std::sqrt().

4.742.4.5 template<typename _RealType = double> template<typename _UniformRandomNumberGenerator > result_type std::normal_distribution< _RealType >::operator() (_UniformRandomNumberGenerator & *__urng*) [inline]

Generating functions.

Definition at line 2079 of file random.h.

Referenced by std::normal_distribution< result_type >::operator()().

4.742.4.6 template<typename _RealType = double> param_type std::normal_distribution< _RealType >::param ( ) const [inline]

Returns the parameter set of the distribution.

Definition at line 2049 of file random.h.

4.742.4.7 template<typename _RealType = double> void std::normal_distribution< _RealType >::param (const param_type & *__param*) [inline]

Sets the parameter set of the distribution.

Parameters

__param	The new parameter set of the distribution.

Definition at line 2057 of file random.h.

4.742.4.8 template<typename _RealType = double> void std::normal_distribution< _RealType >::reset ( ) [inline]

Resets the distribution state.

Definition at line 2028 of file random.h.

Referenced by std::lognormal_distribution< _RealType >::reset(), std::gamma_distribution< result_type >::reset(), std::student_t_distribution< _RealType >::reset(), std::binomial_distribution< _IntType >::reset(), and std::poisson_distribution< _IntType >::reset().

4.742.4.9 template<typename _RealType = double> _RealType std::normal_distribution< _RealType >::stddev ( ) const [inline]

Returns the standard deviation of the distribution.

Definition at line 2042 of file random.h.

4.742.5 Friends And Related Function Documentation

4.742.5.1 template<typename _RealType = double> template<typename _RealType1 , typename _CharT , typename _Traits > std::basic_ostream<_CharT, _Traits>& operator<< (std::basic_ostream< _CharT, _Traits > & *__os,* const std::normal_distribution< _RealType1 > & *__x*) [friend]

Inserts a normal_distribution random number distribution __x into the output stream __os.

Parameters

__os	An output stream.
__x	A normal_distribution random number distribution.

Returns

The output stream with the state of __x inserted or in an error state.

4.742.5.2 template<typename _RealType = double> template<typename _RealType1 > bool operator== (const std::normal_distribution< _RealType1 > & *__d1,* const std::normal_distribution< _RealType1 > & *__d2*) [friend]

Return true if two normal distributions have the same parameters and the sequences that would be generated are equal.

4.742.5.3 template<typename _RealType = double> template<typename _RealType1 , typename _CharT , typename _Traits > std::basic_istream<_CharT, _Traits>& operator>> (std::basic_istream< _CharT, _Traits > & *__is*, std::normal_distribution< _RealType1 > & *__x*) [friend]

Extracts a normal_distribution random number distribution __x from the input stream __is.

Parameters

__is	An input stream.
__x	A normal_distribution random number generator engine.

Returns

The input stream with __x extracted or in an error state.

The documentation for this class was generated from the following files:

4.748.1 Detailed Description

template<typename _CharT, typename _InIter>class std::num_get< _CharT, _InIter >

Primary class template num_get.

This facet encapsulates the code to parse and return a number from a string. It is used by the istream numeric extraction operators.

The num_get template uses protected virtual functions to provide the actual results. The public accessors forward the call to the virtual functions. These virtual functions are hooks for developers to implement the behavior they require from the num_get facet.

Definition at line 1952 of file locale_facets.h.

4.748.2 Member Typedef Documentation

4.748.2.1 template<typename _CharT , typename _InIter > typedef _CharT std::num_get< _CharT, _InIter >::char_type

Public typedefs.

Definition at line 1958 of file locale_facets.h.

4.748.2.2 template<typename _CharT , typename _InIter > typedef _InIter std::num_get< _CharT, _InIter >::iter_type

Definition at line 1959 of file locale_facets.h.

4.748.3 Constructor & Destructor Documentation

4.748.3.1 template<typename _CharT , typename _InIter > std::num_get< _CharT, _InIter >::num_get (size_t __*refs* = 0) [inline], [explicit]

Constructor performs initialization.

This is the constructor provided by the standard.

Parameters

__refs	Passed to the base facet class.

Definition at line 1973 of file locale_facets.h.

4.748.3.2 template<typename _CharT , typename _InIter > virtual std::num_get< _CharT, _InIter >::~num_get ( ) [inline], [protected], [virtual]

Destructor.

Definition at line 2145 of file locale_facets.h.

4.748.4 Member Function Documentation

4.748.4.1 template<typename _CharT , typename _InIter > _InIter std::num_get< _CharT, _InIter >::do_get (iter_type __*beg*, iter_type __*end*, ios_base & __*io*, ios_base::iostate & __*err*, bool & __*v*) const [protected], [virtual]

Numeric parsing.

Parses the input stream into the variable *v*. This function is a hook for derived classes to change the value returned.

See Also

get() for more details.

Parameters

__beg	Start of input stream.
__end	End of input stream.
__io	Source of locale and flags.
__err	Error flags to set.
__v	Value to format and insert.

Returns

Iterator after reading.

Definition at line 595 of file locale_facets.tcc.

References std::ios_base::_M_getloc(), std::ios_base::boolalpha, std::ios_base::eofbit, std::ios_base::failbit, std::ios_base::flags(), and std::ios_base::goodbit.

Referenced by std::num_get< _CharT, _InIter >::get().

4.748.4.2 template<typename _CharT , typename _InIter > virtual iter_type std::num_get< _CharT, _InIter >::do_get (iter_type *__beg,* iter_type *__end,* ios_base & *__io,* ios_base::iostate & *__err,* long & *__v*) const [inline], [protected], [virtual]

Numeric parsing.

Parses the input stream into the variable *v*. This function is a hook for derived classes to change the value returned.

See Also

get() for more details.

Parameters

__beg	Start of input stream.
__end	End of input stream.
__io	Source of locale and flags.
__err	Error flags to set.
__v	Value to format and insert.

Returns

Iterator after reading.

Definition at line 2215 of file locale_facets.h.

4.748.4.3 template<typename _CharT , typename _InIter > virtual iter_type std::num_get< _CharT, _InIter >::do_get (iter_type *__beg,* iter_type *__end,* ios_base & *__io,* ios_base::iostate & *__err,* unsigned short & *__v*) const [inline], [protected], [virtual]

Numeric parsing.

Parses the input stream into the variable *v*. This function is a hook for derived classes to change the value returned.

See Also

get() for more details.

Parameters

__beg	Start of input stream.
__end	End of input stream.
__io	Source of locale and flags.
__err	Error flags to set.
__v	Value to format and insert.

Returns

Iterator after reading.

Definition at line 2220 of file locale_facets.h.

4.748.4.4 template<typename _CharT , typename _InIter > virtual iter_type std::num_get< _CharT, _InIter >::do_get (iter_type *__beg,* iter_type *__end,* ios_base & *__io,* ios_base::iostate & *__err,* unsigned int & *__v*) const [inline], [protected], [virtual]

Numeric parsing.

Parses the input stream into the variable *v*. This function is a hook for derived classes to change the value returned.

See Also

get() for more details.

Parameters

__beg	Start of input stream.
__end	End of input stream.
__io	Source of locale and flags.
__err	Error flags to set.
__v	Value to format and insert.

Returns

Iterator after reading.

Definition at line 2225 of file locale_facets.h.

Numeric parsing.

Parses the input stream into the variable *v*. This function is a hook for derived classes to change the value returned.

See Also

get() for more details.

Parameters

__beg	Start of input stream.
__end	End of input stream.
__io	Source of locale and flags.
__err	Error flags to set.
__v	Value to format and insert.

Returns

Iterator after reading.

Definition at line 753 of file locale_facets.tcc.

References std::ios_base::basefield, std::ios_base::flags(), and std::ios_base::hex.

4.748.4.12 template<typename _CharT , typename _InIter > iter_type std::num_get< _CharT, _InIter >::get (iter_type *__in*, iter_type *__end*, ios_base & *__io*, ios_base::iostate & *__err*, bool & *__v*) const [inline]

Numeric parsing.

Parses the input stream into the bool *v*. It does so by calling num_get::do_get().

If ios_base::boolalpha is set, attempts to read ctype<CharT>::truename() or ctype<CharT>::falsename(). Sets *v* to true or false if successful. Sets err to ios_base::failbit if reading the string fails. Sets err to ios_base::eofbit if the stream is emptied.

If ios_base::boolalpha is not set, proceeds as with reading a long, except if the value is 1, sets *v* to true, if the value is 0, sets *v* to false, and otherwise set err to ios_base::failbit.

Parameters

__in	Start of input stream.
__end	End of input stream.
__io	Source of locale and flags.
__err	Error flags to set.
__v	Value to format and insert.

Returns

Iterator after reading.

Definition at line 1999 of file locale_facets.h.

References std::num_get< _CharT, _InIter >::do_get().

Referenced by std::basic_istream< _CharT, _Traits >::operator>>().

4.748.4.13 template<typename _CharT , typename _InIter > iter_type std::num_get< _CharT, _InIter >::get (iter_type *__in*, iter_type *__end*, ios_base & *__io*, ios_base::iostate & *__err*, long & *__v*) const [inline]

Numeric parsing.

Parses the input stream into the integral variable *v*. It does so by calling num_get::do_get().

Parsing is affected by the flag settings in *io*.

The basic parse is affected by the value of io.flags() & ios_base::basefield. If equal to ios_base::oct, parses like the scanf o specifier. Else if equal to ios_base::hex, parses like X specifier. Else if basefield equal to 0, parses like the i specifier. Otherwise, parses like d for signed and u for unsigned types. The matching type length modifier is also used.

Digit grouping is interpreted according to numpunct::grouping() and numpunct::thousands_sep(). If the pattern of digit groups isn't consistent, sets err to ios_base::failbit.

If parsing the string yields a valid value for *v*, *v* is set. Otherwise, sets err to ios_base::failbit and leaves *v* unaltered. Sets err to ios_base::eofbit if the stream is emptied.

Parameters

__in	Start of input stream.
__end	End of input stream.
__io	Source of locale and flags.
__err	Error flags to set.
__v	Value to format and insert.

Returns

Iterator after reading.

Definition at line 2036 of file locale_facets.h.

References std::num_get< _CharT, _InIter >::do_get().

4.748.4.14 template<typename _CharT , typename _InIter > iter_type std::num_get< _CharT, _InIter >::get (iter_type *__in*, iter_type *__end*, ios_base & *__io*, ios_base::iostate & *__err*, unsigned short & *__v*) const [inline]

Numeric parsing.

Parses the input stream into the integral variable *v*. It does so by calling num_get::do_get().

Parsing is affected by the flag settings in *io*.

The basic parse is affected by the value of io.flags() & ios_base::basefield. If equal to ios_base::oct, parses like the scanf o specifier. Else if equal to ios_base::hex, parses like X specifier. Else if basefield equal to 0, parses like the i specifier. Otherwise, parses like d for signed and u for unsigned types. The matching type length modifier is also used.

Digit grouping is interpreted according to numpunct::grouping() and numpunct::thousands_sep(). If the pattern of digit groups isn't consistent, sets err to ios_base::failbit.

4.748.4.15 template<typename _CharT , typename _InIter > iter_type std::num_get< _CharT, _InIter >::get (iter_type *__in*, iter_type *__end*, ios_base & *__io*, ios_base::iostate & *__err*, unsigned int & *__v*) const [inline]

Numeric parsing.

Parses the input stream into the integral variable *v*. It does so by calling num_get::do_get().

Parsing is affected by the flag settings in *io*.

The basic parse is affected by the value of io.flags() & ios_base::basefield. If equal to ios_base::oct, parses like the scanf o specifier. Else if equal to ios_base::hex, parses like X specifier. Else if basefield equal to 0, parses like the i specifier. Otherwise, parses like d for signed and u for unsigned types. The matching type length modifier is also used.

Digit grouping is interpreted according to numpunct::grouping() and numpunct::thousands_sep(). If the pattern of digit groups isn't consistent, sets err to ios_base::failbit.

If parsing the string yields a valid value for *v*, *v* is set. Otherwise, sets err to ios_base::failbit and leaves *v* unaltered. Sets err to ios_base::eofbit if the stream is emptied.

Parameters

__in	Start of input stream.
__end	End of input stream.
__io	Source of locale and flags.
__err	Error flags to set.
__v	Value to format and insert.

Returns

Iterator after reading.

Definition at line 2046 of file locale_facets.h.

References std::num_get< _CharT, _InIter >::do_get().

4.749.1 Detailed Description

template<typename _CharT, typename _OutIter>class std::num_put< _CharT, _OutIter >

Primary class template num_put.

This facet encapsulates the code to convert a number to a string. It is used by the ostream numeric insertion operators.

The num_put template uses protected virtual functions to provide the actual results. The public accessors forward the call to the virtual functions. These virtual functions are hooks for developers to implement the behavior they require from the num_put facet.

4.749.4 Member Function Documentation

4.749.4.1 template<typename _CharT , typename _OutIter > _OutIter std::num_put< _CharT, _OutIter >::do_put (iter_type __s, ios_base & __io, char_type __fill, bool __v) const [protected], [virtual]

Numeric formatting.

These functions do the work of formatting numeric values and inserting them into a stream. This function is a hook for derived classes to change the value returned.

Parameters

__s	Stream to write to.
__io	Source of locale and flags.
__fill	Char_type to use for filling.
__v	Value to format and insert.

Returns

Iterator after writing.

Definition at line 1106 of file locale_facets.tcc.

References std::ios_base::_M_getloc(), std::ios_base::adjustfield, std::ios_base::boolalpha, std::ios_base::flags(), std::ios_base::left, and std::ios_base::width().

Referenced by std::num_put< _CharT, _OutIter >::put().

4.749.4.2 template<typename _CharT , typename _OutIter > virtual iter_type std::num_put< _CharT, _OutIter >::do_put (iter_type __s, ios_base & __io, char_type __fill, long __v) const [inline], [protected], [virtual]

Numeric formatting.

These functions do the work of formatting numeric values and inserting them into a stream. This function is a hook for derived classes to change the value returned.

Parameters

__s	Stream to write to.
__io	Source of locale and flags.
__fill	Char_type to use for filling.
__v	Value to format and insert.

Returns

Iterator after writing.

Definition at line 2513 of file locale_facets.h.

4.749.4.3 template<typename _CharT , typename _OutIter > virtual iter_type std::num_put< _CharT, _OutIter >::do_put (iter_type __s, ios_base & __io, char_type __fill, unsigned long __v) const [inline], [protected], [virtual]

Numeric formatting.

These functions do the work of formatting numeric values and inserting them into a stream. This function is a hook for derived classes to change the value returned.

Parameters

__s	Stream to write to.
__io	Source of locale and flags.
__fill	Char_type to use for filling.
__v	Value to format and insert.

Returns

Iterator after writing.

Definition at line 2517 of file locale_facets.h.

Numeric formatting.

These functions do the work of formatting numeric values and inserting them into a stream. This function is a hook for derived classes to change the value returned.

Parameters

__s	Stream to write to.
__io	Source of locale and flags.

__fill	Char_type to use for filling.
__v	Value to format and insert.

Returns

Iterator after writing.

Definition at line 1179 of file locale_facets.tcc.

References std::ios_base::flags(), std::ios_base::hex, and std::ios_base::uppercase.

4.749.4.9 template<typename _CharT , typename _OutIter > iter_type std::num_put< _CharT, _OutIter >::put (iter_type *__s,* ios_base & *__io,* char_type *__fill,* bool *__v*) const [inline]

Numeric formatting.

Formats the boolean *v* and inserts it into a stream. It does so by calling num_put::do_put().

If ios_base::boolalpha is set, writes ctype<CharT>::truename() or ctype<CharT>::falsename(). Otherwise formats *v* as an int.

Parameters

__s	Stream to write to.
__io	Source of locale and flags.
__fill	Char_type to use for filling.
__v	Value to format and insert.

Returns

Iterator after writing.

Definition at line 2332 of file locale_facets.h.

References std::num_put< _CharT, _OutIter >::do_put().

4.749.4.10 template<typename _CharT , typename _OutIter > iter_type std::num_put< _CharT, _OutIter >::put (iter_type *__s,* ios_base & *__io,* char_type *__fill,* long *__v*) const [inline]

Numeric formatting.

Formats the integral value *v* and inserts it into a stream. It does so by calling num_put::do_put().

Formatting is affected by the flag settings in *io*.

The basic format is affected by the value of io.flags() & ios_base::basefield. If equal to ios_base::oct, formats like the printf o specifier. Else if equal to ios_base::hex, formats like x or X with ios_base::uppercase unset or set respectively. Otherwise, formats like d, ld, lld for signed and u, lu, llu for unsigned values. Note that if both oct and hex are set, neither will take effect.

If ios_base::showpos is set, '+' is output before positive values. If ios_base::showbase is set, '0' precedes octal values (except 0) and '0[xX]' precedes hex values.

The decimal point character used is numpunct::decimal_point(). Thousands separators are inserted according to numpunct::grouping() and numpunct::thousands_sep().

If io.width() is non-zero, enough *fill* characters are inserted to make the result at least that wide. If (io.flags() & ios_base::adjustfield) == ios_base::left, result is padded at the end. If ios_base::internal, then padding occurs immediately after either a '+' or '-' or after '0x' or '0X'. Otherwise, padding occurs at the beginning.

Parameters

__s	Stream to write to.
__io	Source of locale and flags.
__fill	Char_type to use for filling.
__v	Value to format and insert.

Returns

Iterator after writing.

Definition at line 2374 of file locale_facets.h.

References std::num_put< _CharT, _OutIter >::do_put().

4.749.4.11 template<typename _CharT , typename _OutIter > iter_type std::num_put< _CharT, _OutIter >::put (iter_type *__s*, ios_base & *__io*, char_type *__fill*, unsigned long *__v*) const [inline]

Numeric formatting.

Formats the integral value *v* and inserts it into a stream. It does so by calling num_put::do_put().

Formatting is affected by the flag settings in *io*.

The basic format is affected by the value of io.flags() & ios_base::basefield. If equal to ios_base::oct, formats like the printf o specifier. If ios_base::showpos is set, '+' is output before positive values. If ios_base::showbase is set, '0' precedes octal values (except 0) and '0[xX]' precedes hex values.

The decimal point character used is numpunct::decimal_point(). Thousands separators are inserted according to numpunct::grouping() and numpunct::thousands_sep().

If io.width() is non-zero, enough *fill* characters are inserted to make the result at least that wide. If (io.flags() & ios_base-::adjustfield) == ios_base::left, result is padded at the end. If ios_base::internal, then padding occurs immediately after either a '+' or '-' or after '0x' or '0X'. Otherwise, padding occurs at the beginning.

Parameters

__s	Stream to write to.
__io	Source of locale and flags.
__fill	Char_type to use for filling.
__v	Value to format and insert.

Returns

Iterator after writing.

Definition at line 2384 of file locale_facets.h.

References std::num_put< _CharT, _OutIter >::do_put().

4.749.4.13 template<typename _CharT , typename _OutIter > iter_type std::num_put< _CharT, _OutIter >::put (iter_type *__s,* ios_base & *__io,* char_type *__fill,* unsigned long long *__v*) const [inline]

Numeric formatting.

Formats the integral value *v* and inserts it into a stream. It does so by calling num_put::do_put().

Formatting is affected by the flag settings in *io*.

The basic format is affected by the value of io.flags() & ios_base::basefield. If equal to ios_base::oct, formats like the printf o specifier. Else if equal to ios_base::hex, formats like x or X with ios_base::uppercase unset or set respectively. Otherwise, formats like d, ld, lld for signed and u, lu, llu for unsigned values. Note that if both oct and hex are set, neither will take effect.

If ios_base::showpos is set, '+' is output before positive values. If ios_base::showbase is set, '0' precedes octal values (except 0) and '0[xX]' precedes hex values.

The decimal point character used is numpunct::decimal_point(). Thousands separators are inserted according to numpunct::grouping() and numpunct::thousands_sep().

If io.width() is non-zero, enough *fill* characters are inserted to make the result at least that wide. If (io.flags() & ios_base-::adjustfield) == ios_base::left, result is padded at the end. If ios_base::internal, then padding occurs immediately after either a '+' or '-' or after '0x' or '0X'. Otherwise, padding occurs at the beginning.

Parameters

__s	Stream to write to.
__io	Source of locale and flags.
__fill	Char_type to use for filling.
__v	Value to format and insert.

Returns

Iterator after writing.

Definition at line 2388 of file locale_facets.h.

References std::num_put< _CharT, _OutIter >::do_put().

4.749.4.14 template<typename _CharT , typename _OutIter > iter_type std::num_put< _CharT, _OutIter >::put (iter_type *__s,* ios_base & *__io,* char_type *__fill,* double *__v*) const [inline]

Numeric formatting.

Formats the floating point value *v* and inserts it into a stream. It does so by calling num_put::do_put().

Formatting is affected by the flag settings in *io*.

The basic format is affected by the value of io.flags() & ios_base::floatfield. If equal to ios_base::fixed, formats like the printf f specifier. Else if equal to ios_base::scientific, formats like e or E with ios_base::uppercase unset or set respectively. Otherwise, formats like g or G depending on uppercase. Note that if both fixed and scientific are set, the effect will also be like g or G.

The output precision is given by io.precision(). This precision is capped at numeric_limits::digits10 + 2 (different for double and long double). The default precision is 6.

If ios_base::showpos is set, '+' is output before positive values. If ios_base::showpoint is set, a decimal point will always be output.

The decimal point character used is numpunct::decimal_point(). Thousands separators are inserted according to numpunct::grouping() and numpunct::thousands_sep().

If io.width() is non-zero, enough *fill* characters are inserted to make the result at least that wide. If (io.flags() & ios_base::adjustfield) == ios_base::left, result is padded at the end. If ios_base::internal, then padding occurs immediately after either a '+' or '-' or after '0x' or '0X'. Otherwise, padding occurs at the beginning.

Parameters

__s	Stream to write to.
__io	Source of locale and flags.
__fill	Char_type to use for filling.
__v	Value to format and insert.

Returns

Iterator after writing.

Definition at line 2437 of file locale_facets.h.

References std::num_put< _CharT, _OutIter >::do_put().

4.749.4.15 template<typename _CharT , typename _OutIter > iter_type std::num_put< _CharT, _OutIter >::put (iter_type *__s,* ios_base & *__io,* char_type *__fill,* long double *__v*) const [inline]

Numeric formatting.

Formats the floating point value *v* and inserts it into a stream. It does so by calling num_put::do_put().

Formatting is affected by the flag settings in *io*.

The basic format is affected by the value of io.flags() & ios_base::floatfield. If equal to ios_base::fixed, formats like the printf f specifier. Else if equal to ios_base::scientific, formats like e or E with ios_base::uppercase unset or set respectively. Otherwise, formats like g or G depending on uppercase. Note that if both fixed and scientific are set, the effect will also be like g or G.

The output precision is given by io.precision(). This precision is capped at numeric_limits::digits10 + 2 (different for double and long double). The default precision is 6.

If ios_base::showpos is set, '+' is output before positive values. If ios_base::showpoint is set, a decimal point will always be output.

The decimal point character used is numpunct::decimal_point(). Thousands separators are inserted according to numpunct::grouping() and numpunct::thousands_sep().

If io.width() is non-zero, enough *fill* characters are inserted to make the result at least that wide. If (io.flags() & ios_base-::adjustfield) == ios_base::left, result is padded at the end. If ios_base::internal, then padding occurs immediately after either a '+' or '-' or after '0x' or '0X'. Otherwise, padding occurs at the beginning.

Parameters

__s	Stream to write to.

4.750.1 Detailed Description

template<typename _Tp>struct std::numeric_limits< _Tp >

Properties of fundamental types.

This class allows a program to obtain information about the representation of a fundamental type on a given platform. For non-fundamental types, the functions will return 0 and the data members will all be `false`.

Definition at line 312 of file limits.

4.750.2 Member Function Documentation

4.750.2.1 template<typename _Tp > static constexpr _Tp std::numeric_limits< _Tp >::denorm_min ( ) [inline], [static], [noexcept]

The minimum positive denormalized value. For types where `has_denorm` is false, this is the minimum positive normalized value.

Definition at line 357 of file limits.

4.750.2.2 template<typename _Tp > static constexpr _Tp std::numeric_limits< _Tp >::epsilon ( ) [inline], [static], [noexcept]

The *machine epsilon:* the difference between 1 and the least value greater than 1 that is representable.

Definition at line 333 of file limits.

Referenced by std::generate_canonical(), std::poisson_distribution< _IntType >::operator()(), and std::binomial_distribution< _IntType >::operator()().

4.750.2.3 template<typename _Tp > static constexpr _Tp std::numeric_limits< _Tp >::infinity ( ) [inline], [static], [noexcept]

The representation of positive infinity, if `has_infinity`.

Definition at line 341 of file limits.

4.750.2.4 template<typename _Tp > static constexpr _Tp std::numeric_limits< _Tp >::lowest ( ) [inline], [static], [noexcept]

A finite value x such that there is no other finite value y where y < x.

Definition at line 327 of file limits.

Referenced by std::normal_distribution< result_type >::min(), std::cauchy_distribution< _RealType >::min(), std::student_t_distribution< _RealType >::min(), and std::extreme_value_distribution< _RealType >::min().

4.750.2.5 template<typename _Tp > static constexpr _Tp std::numeric_limits< _Tp >::max ( ) [inline], [static], [noexcept]

The maximum finite value.

Definition at line 321 of file limits.

Referenced by std::normal_distribution< result_type >::max(), std::lognormal_distribution< _RealType >::max(), std::gamma_distribution< result_type >::max(), std::chi_squared_distribution< _RealType >::max(), std::cauchy_distribution< _RealType >::max(), std::fisher_f_distribution< _RealType >::max(), std::student_t_distribution< _RealType >::max(), std::bernoulli_distribution::max(), std::geometric_distribution< _IntType >::max(), std::negative_binomial_distribution< _IntType >::max(), std::poisson_distribution< _IntType >::max(), std::exponential_distribution< _RealType >::max(), std::weibull_distribution< _RealType >::max(), std::extreme_value_distribution< _RealType >::max(), std::tr2::dynamic_bitset< _WordT, _Alloc >::max_size(), std::independent_bits_engine< _RandomNumberEngine, __w, _UIntType >::operator()(), std::poisson_distribution< _IntType >::operator()(), and std::binomial_distribution< _IntType >::operator()().

4.750.2.6 template<typename _Tp > static constexpr _Tp std::numeric_limits< _Tp >::min ( ) [inline], [static], [noexcept]

The minimum finite value, or for floating types with denormalization, the minimum positive normalized value.

Definition at line 317 of file limits.

Referenced by std::bernoulli_distribution::min(), and std::independent_bits_engine< _RandomNumberEngine, __w, _UIntType >::operator()().

4.750.2.7 template<typename _Tp > static constexpr _Tp std::numeric_limits< _Tp >::quiet_NaN ( ) [inline], [static], [noexcept]

The representation of a quiet Not a Number, if `has_quiet_NaN`.

Definition at line 346 of file limits.

4.750.2.8 template<typename _Tp > static constexpr _Tp std::numeric_limits< _Tp >::round_error ( ) [inline], [static], [noexcept]

The maximum rounding error measurement (see LIA-1).

Definition at line 337 of file limits.

4.750.2.9 template<typename _Tp > static constexpr _Tp std::numeric_limits< _Tp >::signaling_NaN ( ) [inline], [static], [noexcept]

The representation of a signaling Not a Number, if `has_signaling_NaN`.

Definition at line 351 of file limits.

4.750.3 Member Data Documentation

4.750.3.1 constexpr int std::__numeric_limits_base::digits [static], [inherited]

The number of `radix` digits that be represented without change: for integer types, the number of non-sign bits in the mantissa; for floating types, the number of `radix` digits in the mantissa.

Definition at line 211 of file limits.

4.750.3.2 constexpr int std::__numeric_limits_base::digits10 [static], [inherited]

The number of base 10 digits that can be represented without change.

Definition at line 214 of file limits.

4.750.3.3 constexpr float_denorm_style std::__numeric_limits_base::has_denorm [static], [inherited]

See std::float_denorm_style for more information.

Definition at line 266 of file limits.

4.750.3.4 constexpr bool std::__numeric_limits_base::has_denorm_loss [static], [inherited]

True if loss of accuracy is detected as a denormalization loss, rather than as an inexact result.

Definition at line 270 of file limits.

4.750.3.5 constexpr bool std::__numeric_limits_base::has_infinity [static], [inherited]

True if the type has a representation for positive infinity.

Definition at line 255 of file limits.

4.750.3.6 constexpr bool std::__numeric_limits_base::has_quiet_NaN [static], [inherited]

True if the type has a representation for a quiet (non-signaling) Not a Number.

Definition at line 259 of file limits.

4.750.3.7 constexpr bool std::__numeric_limits_base::has_signaling_NaN [static], [inherited]

True if the type has a representation for a signaling Not a Number.

Definition at line 263 of file limits.

4.750.3.8 constexpr bool std::__numeric_limits_base::is_bounded [static], [inherited]

True if the set of values representable by the type is finite. All built-in types are bounded, this member would be false for arbitrary precision types.

Definition at line 279 of file limits.

4.750.3.9 constexpr bool std::__numeric_limits_base::is_exact [static], [inherited]

True if the type uses an exact representation. All integer types are exact, but not all exact types are integer. For example, rational and fixed-exponent representations are exact but not integer.

Definition at line 231 of file limits.

4.750.3.10 constexpr bool std::__numeric_limits_base::is_iec559 [static], [inherited]

True if-and-only-if the type adheres to the IEC 559 standard, also known as IEEE 754. (Only makes sense for floating point types.)

Definition at line 274 of file limits.

4.750.3.11 constexpr bool std::__numeric_limits_base::is_integer [static], [inherited]

True if the type is integer.

Definition at line 226 of file limits.

4.750.3.12 constexpr bool std::__numeric_limits_base::is_modulo [static], [inherited]

True if the type is *modulo*. A type is modulo if, for any operation involving +, -, or $*$ on values of that type whose result would fall outside the range [min(),max()], the value returned differs from the true value by an integer multiple of max() - min() + 1. On most machines, this is false for floating types, true for unsigned integers, and true for signed integers. See PR22200 about signed integers.

Definition at line 288 of file limits.

4.750.3.13 constexpr bool std::__numeric_limits_base::is_signed [static], [inherited]

True if the type is signed.

Definition at line 223 of file limits.

4.750.3.14 constexpr bool std::__numeric_limits_base::is_specialized [static], [inherited]

This will be true for all fundamental types (which have specializations), and false for everything else.

Definition at line 206 of file limits.

4.750.3.15 constexpr int std::__numeric_limits_base::max_digits10 [static], [inherited]

The number of base 10 digits required to ensure that values which differ are always differentiated.

Definition at line 219 of file limits.

4.750.3.16 constexpr int std::__numeric_limits_base::max_exponent [static], [inherited]

The maximum positive integer such that `radix` raised to the power of (one less than that integer) is a representable finite floating point number.

Definition at line 248 of file limits.

4.750.3.17 constexpr int std::__numeric_limits_base::max_exponent10 [static], [inherited]

The maximum positive integer such that 10 raised to that power is in the range of representable finite floating point numbers.

Definition at line 252 of file limits.

4.750.3.18 constexpr int std::__numeric_limits_base::min_exponent [static], [inherited]

The minimum negative integer such that `radix` raised to the power of (one less than that integer) is a normalized floating point number.

Definition at line 239 of file limits.

4.750.3.19 constexpr int std::__numeric_limits_base::min_exponent10 [static], [inherited]

The minimum negative integer such that 10 raised to that power is in the range of normalized floating point numbers.

Definition at line 243 of file limits.

4.750.3.20 constexpr int std::__numeric_limits_base::radix [static], [inherited]

For integer types, specifies the base of the representation. For floating types, specifies the base of the exponent representation.

Definition at line 235 of file limits.

4.750.3.21 constexpr float_round_style std::__numeric_limits_base::round_style [static], [inherited]

See std::float_round_style for more information. This is only meaningful for floating types; integer types will all be round_toward_zero.

Definition at line 299 of file limits.

4.750.3.22 constexpr bool std::__numeric_limits_base::tinyness_before [static], [inherited]

True if tininess is detected before rounding. (see IEC 559)

Definition at line 294 of file limits.

4.750.3.23 constexpr bool std::__numeric_limits_base::traps [static], [inherited]

True if trapping is implemented for this type.

Definition at line 291 of file limits.

4.769.1 Detailed Description

template<typename _CharT>class std::numpunct< _CharT >

Primary class template numpunct.

This facet stores several pieces of information related to printing and scanning numbers, such as the decimal point character. It takes a template parameter specifying the char type. The numpunct facet is used by streams for many I/O operations involving numbers.

The numpunct template uses protected virtual functions to provide the actual results. The public accessors forward the call to the virtual functions. These virtual functions are hooks for developers to implement the behavior they require from a numpunct facet.

Definition at line 1670 of file locale_facets.h.

4.769.2 Member Typedef Documentation

4.769.2.1 template<typename _CharT > typedef _CharT std::numpunct< _CharT >::char_type

Public typedefs.

Definition at line 1676 of file locale_facets.h.

4.769.2.2 template<typename _CharT > typedef basic_string<_CharT> std::numpunct< _CharT >::string_type

Public typedefs.

Definition at line 1677 of file locale_facets.h.

4.769.3 Constructor & Destructor Documentation

4.769.3.1 template<typename _CharT > std::numpunct< _CharT >::numpunct (size_t __refs = 0) [inline], [explicit]

Numpunct constructor.

Parameters

__refs	Refcount to pass to the base class.

Definition at line 1694 of file locale_facets.h.

4.769.3.2 template<typename _CharT > std::numpunct< _CharT >::numpunct (__cache_type * __cache, size_t __refs = 0) [inline], [explicit]

Internal constructor. Not for general use.

This is a constructor for use by the library itself to set up the predefined locale facets.

Parameters

__cache	__numpunct_cache object.
__refs	Refcount to pass to the base class.

Definition at line 1708 of file locale_facets.h.

4.769.3.3 template<typename _CharT > std::numpunct< _CharT >::numpunct (__c_locale __cloc, size_t __refs = 0) [inline], [explicit]

Internal constructor. Not for general use.

This is a constructor for use by the library itself to set up new locales.

Parameters

__cloc	The C locale.
__refs	Refcount to pass to the base class.

Definition at line 1722 of file locale_facets.h.

4.769.3.4 template<typename _CharT > virtual std::numpunct< _CharT >::~numpunct ( ) [protected], [virtual]

Destructor.

4.769.4 Member Function Documentation

4.769.4.1 template<typename _CharT > char_type std::numpunct< _CharT >::decimal_point ( ) const [inline]

Return decimal point character.

This function returns a char_type to use as a decimal point. It does so by returning returning numpunct<char_type>::do_decimal_point().

Returns

char_type representing a decimal point.

Definition at line 1736 of file locale_facets.h.

References std::numpunct< _CharT >::do_decimal_point().

4.769.4.2 template<typename _CharT > virtual char_type std::numpunct< _CharT >::do_decimal_point ( ) const [inline], [protected], [virtual]

Return decimal point character.

Returns a char_type to use as a decimal point. This function is a hook for derived classes to change the value returned.

Returns

char_type representing a decimal point.

Definition at line 1823 of file locale_facets.h.

Referenced by std::numpunct< _CharT >::decimal_point().

4.769.4.3 template<typename _CharT > virtual string_type std::numpunct< _CharT >::do_falsename ( ) const [inline], [protected], [virtual]

Return string representation of bool false.

Returns a string_type containing the text representation for false bool variables. This function is a hook for derived classes to change the value returned.

Returns

string_type representing printed form of false.

Definition at line 1874 of file locale_facets.h.

Referenced by std::numpunct< _CharT >::falsename().

4.769.4.4 template<typename _CharT > virtual string std::numpunct< _CharT >::do_grouping ( ) const [inline], [protected], [virtual]

Return grouping specification.

Returns a string representing groupings for the integer part of a number. This function is a hook for derived classes to change the value returned.

See Also

grouping() for details.

Returns

String representing grouping specification.

Definition at line 1848 of file locale_facets.h.

Referenced by std::numpunct< _CharT >::grouping().

4.769.4.5 template<typename _CharT > virtual char_type std::numpunct< _CharT >::do_thousands_sep ( ) const [inline], [protected], [virtual]

Return thousands separator character.

Returns a char_type to use as a thousands separator. This function is a hook for derived classes to change the value returned.

Returns

char_type representing a thousands separator.

Definition at line 1835 of file locale_facets.h.

Referenced by std::numpunct< _CharT >::thousands_sep().

4.769.4.6 template<typename _CharT > virtual string_type std::numpunct< _CharT >::do_truename ( ) const [inline],[protected],[virtual]

Return string representation of bool true.

Returns a string_type containing the text representation for true bool variables. This function is a hook for derived classes to change the value returned.

Returns

string_type representing printed form of true.

Definition at line 1861 of file locale_facets.h.

Referenced by std::numpunct< _CharT >::truename().

4.769.4.7 template<typename _CharT > string_type std::numpunct< _CharT >::falsename ( ) const [inline]

Return string representation of bool false.

This function returns a string_type containing the text representation for false bool variables. It does so by calling numpunct<char_type>::do_falsename().

Returns

string_type representing printed form of false.

Definition at line 1806 of file locale_facets.h.

References std::numpunct< _CharT >::do_falsename().

4.769.4.8 template<typename _CharT > string std::numpunct< _CharT >::grouping ( ) const [inline]

Return grouping specification.

This function returns a string representing groupings for the integer part of a number. Groupings indicate where thousands separators should be inserted in the integer part of a number.

Each char in the return string is interpret as an integer rather than a character. These numbers represent the number of digits in a group. The first char in the string represents the number of digits in the least significant group. If a char is negative, it indicates an unlimited number of digits for the group. If more chars from the string are required to group a number, the last char is used repeatedly.

For example, if the grouping() returns "\003\002" and is applied to the number 123456789, this corresponds to 12,34,56,789. Note that if the string was "32", this would put more than 50 digits into the least significant group if the character set is ASCII.

The string is returned by calling numpunct<char_type>::do_grouping().

Returns

string representing grouping specification.

Definition at line 1780 of file locale_facets.h.

References std::numpunct< _CharT >::do_grouping().

4.769.4.9 template<typename _CharT > char_type std::numpunct< _CharT >::thousands_sep ( ) const [inline]

Return thousands separator character.

This function returns a char_type to use as a thousands separator. It does so by returning returning numpunct<char_type>::do_thousands_sep().

Returns

char_type representing a thousands separator.

Definition at line 1749 of file locale_facets.h.

References std::numpunct< _CharT >::do_thousands_sep().

4.769.4.10 template<typename _CharT > string_type std::numpunct< _CharT >::truename ( ) const [inline]

Return string representation of bool true.

This function returns a string_type containing the text representation for true bool variables. It does so by calling numpunct<char_type>::do_truename().

Returns

string_type representing printed form of true.

Definition at line 1793 of file locale_facets.h.

References std::numpunct< _CharT >::do_truename().

4.770.1 Detailed Description

template<typename _CharT>class std::numpunct_byname< _CharT >

class numpunct_byname [22.2.3.2].

Definition at line 1903 of file locale_facets.h.

4.770.2 Member Function Documentation

4.770.2.1 template<typename _CharT > char_type std::numpunct< _CharT >::decimal_point ( ) const [inline], [inherited]

Return decimal point character.

This function returns a char_type to use as a decimal point. It does so by returning returning numpunct<char_type>-::do_decimal_point().

Returns

char_type representing a decimal point.

Definition at line 1736 of file locale_facets.h.

References std::numpunct< _CharT >::do_decimal_point().

4.770.2.2 template<typename _CharT > virtual char_type std::numpunct< _CharT >::do_decimal_point ( ) const [inline], [protected], [virtual], [inherited]

Return decimal point character.

Returns a char_type to use as a decimal point. This function is a hook for derived classes to change the value returned.

Returns

char_type representing a decimal point.

Definition at line 1823 of file locale_facets.h.

Referenced by std::numpunct< _CharT >::decimal_point().

4.770.2.3 template<typename _CharT > virtual string_type std::numpunct< _CharT >::do_falsename ( ) const [inline], [protected], [virtual], [inherited]

Return string representation of bool false.

Returns a string_type containing the text representation for false bool variables. This function is a hook for derived classes to change the value returned.

Returns

string_type representing printed form of false.

Definition at line 1874 of file locale_facets.h.

Referenced by std::numpunct< _CharT >::falsename().

4.770.2.4 template<typename _CharT > virtual string std::numpunct< _CharT >::do_grouping ( ) const [inline], [protected], [virtual], [inherited]

Return grouping specification.

Returns a string representing groupings for the integer part of a number. This function is a hook for derived classes to change the value returned.

See Also

grouping() for details.

Returns

String representing grouping specification.

Definition at line 1848 of file locale_facets.h.

Referenced by std::numpunct< _CharT >::grouping().

4.770.2.5 template<typename _CharT > virtual char_type std::numpunct< _CharT >::do_thousands_sep ( ) const [inline], [protected], [virtual], [inherited]

Return thousands separator character.

Returns a char_type to use as a thousands separator. This function is a hook for derived classes to change the value returned.

Returns

char_type representing a thousands separator.

Definition at line 1835 of file locale_facets.h.

Referenced by std::numpunct< _CharT >::thousands_sep().

4.770.2.6 template<typename _CharT > virtual string_type std::numpunct< _CharT >::do_truename ( ) const [inline], [protected], [virtual], [inherited]

Return string representation of bool true.

Returns a string_type containing the text representation for true bool variables. This function is a hook for derived classes to change the value returned.

Returns

string_type representing printed form of true.

Definition at line 1861 of file locale_facets.h.

Referenced by std::numpunct< _CharT >::truename().

4.770.2.7 template<typename _CharT > string_type std::numpunct< _CharT >::falsename ( ) const [inline], [inherited]

Return string representation of bool false.

This function returns a string_type containing the text representation for false bool variables. It does so by calling numpunct<char_type>::do_falsename().

Returns

string_type representing printed form of false.

Definition at line 1806 of file locale_facets.h.

References std::numpunct< _CharT >::do_falsename().

4.770.2.8 template<typename _CharT > string std::numpunct< _CharT >::grouping ( ) const [inline], [inherited]

Return grouping specification.

This function returns a string representing groupings for the integer part of a number. Groupings indicate where thousands separators should be inserted in the integer part of a number.

Each char in the return string is interpret as an integer rather than a character. These numbers represent the number of digits in a group. The first char in the string represents the number of digits in the least significant group. If a char is negative, it indicates an unlimited number of digits for the group. If more chars from the string are required to group a number, the last char is used repeatedly.

For example, if the grouping() returns "\003\002" and is applied to the number 123456789, this corresponds to 12,34,56,789. Note that if the string was "32", this would put more than 50 digits into the least significant group if the character set is ASCII.

The string is returned by calling numpunct<char_type>::do_grouping().

Returns

string representing grouping specification.

Definition at line 1780 of file locale_facets.h.

References std::numpunct< _CharT >::do_grouping().

4.770.2.9 template<typename _CharT > char_type std::numpunct< _CharT >::thousands_sep ( ) const [inline], [inherited]

Return thousands separator character.

This function returns a char_type to use as a thousands separator. It does so by returning returning numpunct<char_type>::do_thousands_sep().

Returns

char_type representing a thousands separator.

Definition at line 1749 of file locale_facets.h.

References std::numpunct< _CharT >::do_thousands_sep().

4.770.2.10 template<typename _CharT > string_type std::numpunct< _CharT >::truename ( ) const [inline], [inherited]

Return string representation of bool true.

This function returns a string_type containing the text representation for true bool variables. It does so by calling numpunct<char_type>::do_truename().

Returns

string_type representing printed form of true.

Definition at line 1793 of file locale_facets.h.

References std::numpunct< _CharT >::do_truename().

4.775.1 Detailed Description

template<typename _Tp, typename _CharT = char, typename _Traits = char_traits<_CharT>>class std::ostream_iterator< _Tp, _CharT, _Traits >

Provides output iterator semantics for streams.

This class provides an iterator to write to an ostream. The type Tp is the only type written by this iterator and there must be an operator<<(Tp) defined.

Template Parameters

_Tp	The type to write to the ostream.
_CharT	The ostream char_type.
_Traits	The ostream char_traits.

Definition at line 176 of file stream_iterator.h.

4.775.2 Member Typedef Documentation

4.775.2.1 template<typename _Tp , typename _CharT = char, typename _Traits = char_traits<_CharT>> typedef _CharT std::ostream_iterator< _Tp, _CharT, _Traits >::char_type

Public typedef.

Definition at line 185 of file stream_iterator.h.

4.775.2.2 typedef void std::iterator< output_iterator_tag , void , void , void , void >::difference_type [inherited]

Distance between iterators is represented as this type.

Definition at line 134 of file stl_iterator_base_types.h.

4.775.2.3 typedef output_iterator_tag std::iterator< output_iterator_tag , void , void , void , void >::iterator_category [inherited]

One of the tag types.

Definition at line 130 of file stl_iterator_base_types.h.

4.775.2.4 template<typename _Tp , typename _CharT = char, typename _Traits = char_traits<_CharT>> typedef basic_ostream<_CharT, _Traits> std::ostream_iterator< _Tp, _CharT, _Traits >::ostream_type

Public typedef.

Definition at line 187 of file stream_iterator.h.

4.775.2.5 typedef void std::iterator< output_iterator_tag , void , void , void , void >::pointer [inherited]

This type represents a pointer-to-value_type.

Definition at line 136 of file stl_iterator_base_types.h.

4.775.2.6 typedef void std::iterator< output_iterator_tag , void , void , void , void >::reference [inherited]

This type represents a reference-to-value_type.

Definition at line 138 of file stl_iterator_base_types.h.

4.775.2.7 template<typename _Tp , typename _CharT = char, typename _Traits = char_traits<_CharT>> typedef _Traits std::ostream_iterator< _Tp, _CharT, _Traits >::traits_type

Public typedef.

Definition at line 186 of file stream_iterator.h.

4.775.2.8 typedef void std::iterator< output_iterator_tag , void , void , void , void >::value_type [inherited]

The type "pointed to" by the iterator.

Definition at line 132 of file stl_iterator_base_types.h.

4.775.3 Constructor & Destructor Documentation

4.775.3.1 template<typename _Tp , typename _CharT = char, typename _Traits = char_traits<_CharT>> std::ostream_iterator< _Tp, _CharT, _Traits >::ostream_iterator (ostream_type & __s) [inline]

Construct from an ostream.

Definition at line 201 of file stream_iterator.h.

4.775.3.2 template<typename _Tp , typename _CharT = char, typename _Traits = char_traits<_CharT>> std::ostream_iterator< _Tp, _CharT, _Traits >::ostream_iterator (ostream_type & __s, const _CharT * __c) [inline]

Construct from an ostream.

The delimiter string *c* is written to the stream after every Tp written to the stream. The delimiter is not copied, and thus must not be destroyed while this iterator is in use.

Parameters

__s	Underlying ostream to write to.
__c	CharT delimiter string to insert.

Definition at line 214 of file stream_iterator.h.

4.775.3.3 template<typename _Tp , typename _CharT = char, typename _Traits = char_traits<_CharT>> std::ostream_iterator< _Tp, _CharT, _Traits >::ostream_iterator (const ostream_iterator< _Tp, _CharT, _Traits > & __obj) [inline]

Copy constructor.

Definition at line 218 of file stream_iterator.h.

4.775.4 Member Function Documentation

4.775.4.1 template<typename _Tp , typename _CharT = char, typename _Traits = char_traits<_CharT>> ostream_iterator& std::ostream_iterator< _Tp, _CharT, _Traits >::operator= (const _Tp & __value) [inline]

Writes *value* to underlying ostream using operator<<. If constructed with delimiter string, writes delimiter to ostream.

Definition at line 228 of file stream_iterator.h.

The documentation for this class was generated from the following file:

- stream_iterator.h

  ::__value, ostreambuf_iterator
  < _CharT2 > >::__type **copy** (istreambuf_iterator< _CharT2 >, istreambuf_iterator< _CharT2 >, ostreambuf-
  _iterator< _CharT2 >)

4.777.1 Detailed Description

template<typename _CharT, typename _Traits = char_traits<_CharT>>class std::ostreambuf_iterator< _CharT, _Traits >

Provides output iterator semantics for streambufs.

Definition at line 128 of file iosfwd.

4.777.2 Member Typedef Documentation

4.777.2.1 template<typename _CharT , typename _Traits = char_traits<_CharT>> typedef _CharT std::ostreambuf_iterator< _CharT, _Traits >::char_type

Public typedefs.

Definition at line 249 of file streambuf_iterator.h.

4.777.2.2 typedef void std::iterator< output_iterator_tag , void , void , void , void >::difference_type [inherited]

Distance between iterators is represented as this type.

Definition at line 134 of file stl_iterator_base_types.h.

4.777.2.3 typedef output_iterator_tag std::iterator< output_iterator_tag , void , void , void , void >::iterator_category [inherited]

One of the tag types.

Definition at line 130 of file stl_iterator_base_types.h.

4.777.2.4 template<typename _CharT , typename _Traits = char_traits<_CharT>> typedef basic_ostream<_CharT, _Traits> std::ostreambuf_iterator< _CharT, _Traits >::ostream_type

Public typedefs.

Definition at line 252 of file streambuf_iterator.h.

4.777.2.5 typedef void std::iterator< output_iterator_tag , void , void , void , void >::pointer [inherited]

This type represents a pointer-to-value_type.

Definition at line 136 of file stl_iterator_base_types.h.

4.777.2.6 typedef void std::iterator< output_iterator_tag , void , void , void , void >::reference [inherited]

This type represents a reference-to-value_type.

Definition at line 138 of file stl_iterator_base_types.h.

4.777.2.7 template<typename _CharT , typename _Traits = char_traits<_CharT>> typedef basic_streambuf<_CharT, _Traits> std::ostreambuf_iterator< _CharT, _Traits >::streambuf_type

Public typedefs.

Definition at line 251 of file streambuf_iterator.h.

4.777.2.8 template<typename _CharT , typename _Traits = char_traits<_CharT>> typedef _Traits std::ostreambuf_iterator< _CharT, _Traits >::traits_type

Public typedefs.

Definition at line 250 of file streambuf_iterator.h.

4.777.2.9 typedef void std::iterator< output_iterator_tag , void , void , void , void >::value_type [inherited]

The type "pointed to" by the iterator.

Definition at line 132 of file stl_iterator_base_types.h.

4.777.3 Constructor & Destructor Documentation

4.777.3.1 template<typename _CharT , typename _Traits = char_traits<_CharT>> std::ostreambuf_iterator< _CharT, _Traits >::ostreambuf_iterator (ostream_type & __s) [inline], [noexcept]

Construct output iterator from ostream.

Definition at line 274 of file streambuf_iterator.h.

4.777.3.2 template<typename _CharT , typename _Traits = char_traits<_CharT>> std::ostreambuf_iterator< _CharT, _Traits >::ostreambuf_iterator (streambuf_type * __s) [inline], [noexcept]

Construct output iterator from streambuf.

Definition at line 278 of file streambuf_iterator.h.

4.777.4 Member Function Documentation

4.777.4.1 template<typename _CharT , typename _Traits = char_traits<_CharT>> bool std::ostreambuf_iterator< _CharT, _Traits >::failed ( ) const [inline], [noexcept]

Return true if previous operator=() failed.

Definition at line 308 of file streambuf_iterator.h.

4.777.4.2 template<typename _CharT , typename _Traits = char_traits<_CharT>> ostreambuf_iterator& std::ostreambuf_iterator< _CharT, _Traits >::operator* ( ) [inline]

Return *this.

Definition at line 293 of file streambuf_iterator.h.

4.777.4.3 template<typename _CharT , typename _Traits = char_traits<_CharT>> ostreambuf_iterator& std::ostreambuf_iterator< _CharT, _Traits >::operator++ (int) [inline]

Return *this.

Definition at line 298 of file streambuf_iterator.h.

4.777.4.4 template<typename _CharT , typename _Traits = char_traits<_CharT>> ostreambuf_iterator& std::ostreambuf_iterator< _CharT, _Traits >::operator++ ( ) [inline]

Return *this.

Definition at line 303 of file streambuf_iterator.h.

4.777.4.5 template<typename _CharT , typename _Traits = char_traits<_CharT>> ostreambuf_iterator& std::ostreambuf_iterator< _CharT, _Traits >::operator= (_CharT __c) [inline]

Write character to streambuf. Calls streambuf.sputc().

Definition at line 283 of file streambuf_iterator.h.

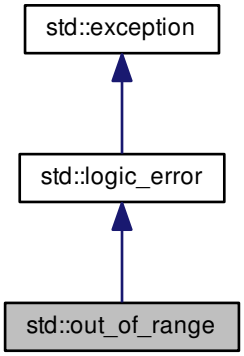
References std::basic_streambuf< _CharT, _Traits >::sputc().

The documentation for this class was generated from the following files:

- iosfwd
- streambuf_iterator.h

4.778 std::out_of_range Class Reference

Inheritance diagram for std::out_of_range:



Public Member Functions

- **out_of_range** (const string &__arg) _GLIBCXX_TXN_SAFE
- **out_of_range** (const char *) _GLIBCXX_TXN_SAFE
- **out_of_range** (const out_of_range &)=default
- **out_of_range** (out_of_range &&)=default
- out_of_range & **operator=** (const out_of_range &)=default
- out_of_range & **operator=** (out_of_range &&)=default
- virtual const char * what () const noexcept

4.778.1 Detailed Description

This represents an argument whose value is not within the expected range (e.g., boundary checks in basic_string).

Definition at line 200 of file stdexcept.

4.778.2 Member Function Documentation

4.778.2.1 virtual const char* std::logic_error::what ( ) const [virtual], [noexcept], [inherited]

Returns a C-style character string describing the general cause of the current error (the same string passed to the ctor).

Reimplemented from std::exception.

Reimplemented in std::future_error.

The documentation for this class was generated from the following file:

- stdexcept

4.779 std::output_iterator_tag Struct Reference

4.779.1 Detailed Description

Marking output iterators.

Definition at line 96 of file stl_iterator_base_types.h.

The documentation for this struct was generated from the following file:

- stl_iterator_base_types.h

4.780 __gnu_pbds::detail::ov_tree_map< Key, Mapped, Cmp_Fn, Node_And_It_Traits, _Alloc > Class Template Reference

4.780.1 Detailed Description

template<typename Key, typename Mapped, typename Cmp_Fn, typename Node_And_It_Traits, typename _Alloc>class __gnu_pbds::detail::ov_tree_map< Key, Mapped, Cmp_Fn, Node_And_It_Traits, _Alloc >

Ordered-vector tree associative-container.

Definition at line 106 of file ov_tree_map_.hpp.

4.780.2 Member Function Documentation

4.780.2.1 template<typename Key , typename Mapped , typename Cmp_Fn , typename Node_And_It_Traits , typename _Alloc > ov_tree_map< Key, Mapped, Cmp_Fn, Node_And_It_Traits, _Alloc >::node_const_iterator __gnu_pbds::detail::ov_tree_map< Key, Mapped, Cmp_Fn, Node_And_It_Traits, _Alloc >::node_begin ( ) const [inline]

Returns a const node_iterator corresponding to the node at the root of the tree.

Definition at line 47 of file ov_tree_map_.hpp.

4.780.2.2 template<typename Key , typename Mapped , typename Cmp_Fn , typename Node_And_It_Traits , typename _Alloc > ov_tree_map< Key, Mapped, Cmp_Fn, Node_And_It_Traits, _Alloc >::node_iterator __gnu_pbds::detail::ov_tree_map< Key, Mapped, Cmp_Fn, Node_And_It_Traits, _Alloc >::node_begin ( ) [inline]

Returns a node_iterator corresponding to the node at the root of the tree.

Definition at line 59 of file ov_tree_map_.hpp.

4.780.2.3 template<typename Key , typename Mapped , typename Cmp_Fn , typename Node_And_It_Traits , typename _Alloc > ov_tree_map< Key, Mapped, Cmp_Fn, Node_And_It_Traits, _Alloc >::node_const_iterator __gnu_pbds::detail::ov_tree_map< Key, Mapped, Cmp_Fn, Node_And_It_Traits, _Alloc >::node_end ( ) const [inline]

Returns a const node_iterator corresponding to a node just after a leaf of the tree.

Definition at line 53 of file ov_tree_map_.hpp.

4.780.2.4 template<typename Key , typename Mapped , typename Cmp_Fn , typename Node_And_It_Traits , typename _Alloc > ov_tree_map< Key, Mapped, Cmp_Fn, Node_And_It_Traits, _Alloc >::node_iterator __gnu_pbds::detail::ov_tree_map< Key, Mapped, Cmp_Fn, Node_And_It_Traits, _Alloc >::node_end ( ) [inline]

Returns a node_iterator corresponding to a node just after a leaf of the tree.

Definition at line 65 of file ov_tree_map_.hpp.

The documentation for this class was generated from the following file:

- ov_tree_map_.hpp

`result_type` is the return type

Definition at line 127 of file stl_function.h.

4.789.2.3 typedef _Tp std::binary_function< _Tp , _Tp , bool >::second_argument_type [inherited]

`second_argument_type` is the type of the second argument

Definition at line 124 of file stl_function.h.

The documentation for this struct was generated from the following file:

- experimental/bits/shared_ptr.h

4.790 std::owner_less< weak_ptr< _Tp > > Struct Template Reference

Inherits std::_Sp_owner_less< _Tp, _Tp1 >.

Public Types

- typedef _Tp first_argument_type
- typedef bool result_type
- typedef _Tp second_argument_type

Public Member Functions

- bool **operator()** (const _Tp &__lhs, const _Tp &__rhs) const noexcept
- bool **operator()** (const _Tp &__lhs, const _Tp1 &__rhs) const noexcept
- bool **operator()** (const _Tp1 &__lhs, const _Tp &__rhs) const noexcept

4.790.1 Detailed Description

template<typename _Tp>struct std::owner_less< weak_ptr< _Tp > >

Partial specialization of owner_less for weak_ptr.

Definition at line 783 of file bits/shared_ptr.h.

4.790.2 Member Typedef Documentation

4.790.2.1 typedef _Tp std::binary_function< _Tp , _Tp , bool >::first_argument_type [inherited]

`first_argument_type` is the type of the first argument

Definition at line 121 of file stl_function.h.

4.790.2.2 typedef bool std::binary_function< _Tp , _Tp , bool >::result_type [inherited]

`result_type` is the return type

Definition at line 127 of file stl_function.h.

4.790.2.3 typedef _Tp std::binary_function< _Tp , _Tp , bool >::second_argument_type [inherited]

`second_argument_type` is the type of the second argument

Definition at line 124 of file stl_function.h.

The documentation for this struct was generated from the following file:

- bits/shared_ptr.h

4.792.1 Detailed Description

template<typename _T1, typename _T2>struct std::pair< _T1, _T2 >

Struct holding two objects of arbitrary type.

Template Parameters

_T1	Type of first object.
_T2	Type of second object.

https://gcc.gnu.org/onlinedocs/libstdc++/manual/utilities.html

Definition at line 211 of file stl_pair.h.

4.792.2 Member Typedef Documentation

4.792.2.1 template<typename _T1, typename _T2> typedef _T1 std::pair< _T1, _T2 >::first_type

The type of the `first` member.

Definition at line 214 of file stl_pair.h.

4.792.2.2 template<typename _T1, typename _T2> typedef _T2 std::pair< _T1, _T2 >::second_type

The type of the `second` member.

Definition at line 215 of file stl_pair.h.

4.792.3 Constructor & Destructor Documentation

4.792.3.1 template<typename _T1, typename _T2> template<typename _U1 = _T1, typename _U2 = _T2, typename enable_if< __and_< __is_implicitly_default_constructible< _U1 >, __is_implicitly_default_constructible< _U2 >>::value, bool >::type = true> constexpr std::pair< _T1, _T2 >::pair ( ) [inline]

The default constructor creates `first` and `second` using their respective default constructors.

Definition at line 232 of file stl_pair.h.

4.792.3.2 template<typename _T1, typename _T2> template<typename _U1 = _T1, typename _U2 = _T2, typename enable_if< _PCCP::template_ConstructiblePair< _U1, _U2 >()&&_PCCP::template_ImplicitlyConvertiblePair< _U1, _U2 >(), bool >::type = true> constexpr std::pair< _T1, _T2 >::pair (const _T1 & __a, const _T2 & __b) [inline]

Construct from two const lvalues, allowing implicit conversions.

Definition at line 266 of file stl_pair.h.

4.792.3.3 template<typename _T1, typename _T2> template<typename _U1 = _T1, typename _U2 = _T2, typename enable_if< _PCCP::template_ConstructiblePair< _U1, _U2 >()&&!_PCCP::template_ImplicitlyConvertiblePair< _U1, _U2 >(), bool >::type = false> constexpr std::pair< _T1, _T2 >::pair (const _T1 & __a, const _T2 & __b) [inline], [explicit]

Construct from two const lvalues, disallowing implicit conversions.

Definition at line 276 of file stl_pair.h.

4.792.3.4 template<typename _T1, typename _T2> constexpr std::pair< _T1, _T2 >::pair (const pair< _T1, _T2 > &) [default]

Copy constructor.

4.792.3.5 template<typename _T1, typename _T2> constexpr std::pair< _T1, _T2 >::pair (pair< _T1, _T2 > &&) [default]

Move constructor.

4.792.4 Member Function Documentation

4.792.4.1 template<typename _T1, typename _T2> constexpr void std::pair< _T1, _T2 >::swap (pair< _T1, _T2 > & __p) [inline], [noexcept]

Swap the first members and then the second members.

Definition at line 439 of file stl_pair.h.

Referenced by std::pair< _BiIter, _BiIter >::swap(), and std::pair< _T1, _T2 >::swap().

4.792.5 Member Data Documentation

4.792.5.1 template<typename _T1, typename _T2> _T1 std::pair< _T1, _T2 >::first

The first member.

Definition at line 217 of file stl_pair.h.

Referenced by std::__sample(), std::_Temporary_buffer< _ForwardIterator, _Tp >::_Temporary_buffer(), std::set< _Key, _Compare, _Alloc >::insert(), std::pair< _T1, _T2 >::operator<(), std::pair< _T1, _T2 >::operator==(), std::shuffle(), and std::pair< _BiIter, _BiIter >::swap().

4.792.5.2 template<typename _T1, typename _T2> _T2 std::pair< _T1, _T2 >::second

The second member.

Definition at line 218 of file stl_pair.h.

Referenced by std::__sample(), std::_Temporary_buffer< _ForwardIterator, _Tp >::_Temporary_buffer(), std::set< _Key, _Compare, _Alloc >::insert(), std::pair< _T1, _T2 >::operator<(), std::pair< _T1, _T2 >::operator==(), std::shuffle(), and std::pair< _BiIter, _BiIter >::swap().

4.793.1 Detailed Description

template<typename Value_Type, typename Cmp_Fn, typename _Alloc>class __gnu_pbds::detail::pairing_heap< Value_Type, Cmp_Fn, _Alloc >

Pairing heap.

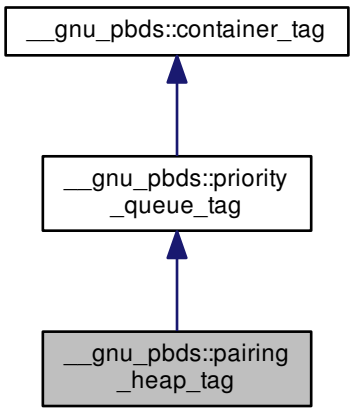
Definition at line 77 of file pairing_heap_.hpp.

The documentation for this class was generated from the following file:

- pairing_heap_.hpp

4.794 __gnu_pbds::pairing_heap_tag Struct Reference

Inheritance diagram for __gnu_pbds::pairing_heap_tag:



4.794.1 Detailed Description

Pairing-heap.

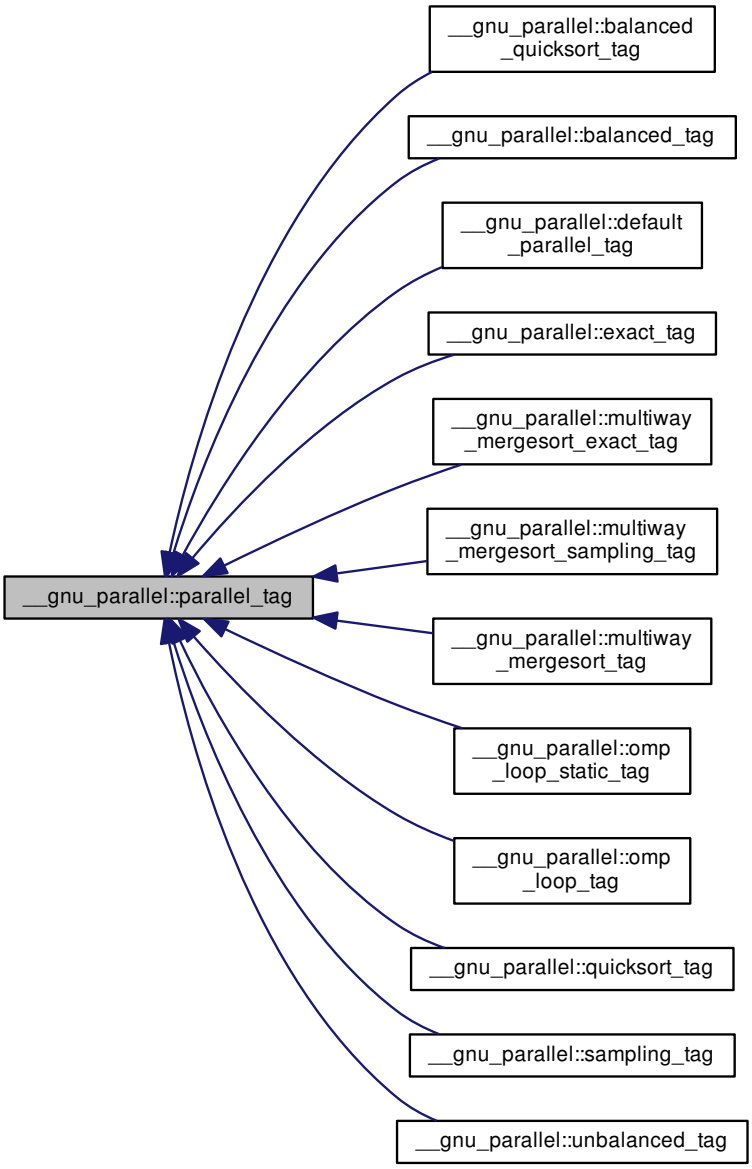
Definition at line 174 of file tag_and_trait.hpp.

The documentation for this struct was generated from the following file:

- tag_and_trait.hpp

4.795 __gnu_parallel::parallel_tag Struct Reference

Inheritance diagram for __gnu_parallel::parallel_tag:



Public Member Functions

- parallel_tag ()
- parallel_tag (_ThreadIndex __num_threads)
- _ThreadIndex __get_num_threads ()

- void set_num_threads (_ThreadIndex __num_threads)

4.795.1 Detailed Description

Recommends parallel execution at compile time, optionally using a user-specified number of threads.

Definition at line 46 of file tags.h.

4.795.2 Constructor & Destructor Documentation

4.795.2.1 __gnu_parallel::parallel_tag::parallel_tag ( ) [inline]

Default constructor. Use default number of threads.

Definition at line 53 of file tags.h.

4.795.2.2 __gnu_parallel::parallel_tag::parallel_tag (_ThreadIndex *__num_threads*) [inline]

Default constructor. Recommend number of threads to use.

Parameters

__num_threads	Desired number of threads.

Definition at line 58 of file tags.h.

4.795.3 Member Function Documentation

4.795.3.1 _ThreadIndex __gnu_parallel::parallel_tag::__get_num_threads ( ) [inline]

Find out desired number of threads.

Returns

Desired number of threads.

Definition at line 63 of file tags.h.

Referenced by __gnu_parallel::__parallel_sort().

4.795.3.2 void __gnu_parallel::parallel_tag::set_num_threads (_ThreadIndex *__num_threads*) [inline]

Set the desired number of threads.

Parameters

__num_threads	Desired number of threads.

Definition at line 73 of file tags.h.

4.817.1 Detailed Description

template<typename Key, typename Mapped, typename Node_And_It_Traits, typename _Alloc>class __gnu_pbds::detail::pat_trie_map< Key, Mapped, Node_And_It_Traits, _Alloc >

PATRICIA trie.

This implementation loosely borrows ideas from: 1) Fast Mergeable Integer Maps, Okasaki, Gill 1998 2) Ptset: Sets of integers implemented as Patricia trees, Jean-Christophe Filliatr, 2000.

Definition at line 101 of file pat_trie_.hpp.

4.817.2 Member Enumeration Documentation

4.817.2.1 enum __gnu_pbds::detail::pat_trie_base::node_type [inherited]

Three types of nodes.

i_node is used by _Inode, leaf_node by _Leaf, and head_node by _Head.

Definition at line 58 of file pat_trie_base.hpp.

4.817.3 Member Function Documentation

4.817.3.1 template<typename Key , typename Mapped , typename Node_And_It_Traits , typename _Alloc > pat_trie_map< Key, Mapped, Node_And_It_Traits, _Alloc >::node_const_iterator __gnu_pbds::detail::pat_trie_map< Key, Mapped, Node_And_It_Traits, _Alloc >::node_begin ( ) const [inline]

Returns a const node_iterator corresponding to the node at the root of the tree.

Definition at line 103 of file pat_trie_.hpp.

4.817.3.2 template<typename Key , typename Mapped , typename Node_And_It_Traits , typename _Alloc > pat_trie_map< Key, Mapped, Node_And_It_Traits, _Alloc >::node_iterator __gnu_pbds::detail::pat_trie_map< Key, Mapped, Node_And_It_Traits, _Alloc >::node_begin ( ) [inline]

Returns a node_iterator corresponding to the node at the root of the tree.

Definition at line 109 of file pat_trie_.hpp.

4.817.3.3 template<typename Key , typename Mapped , typename Node_And_It_Traits , typename _Alloc > pat_trie_map< Key, Mapped, Node_And_It_Traits, _Alloc >::node_const_iterator __gnu_pbds::detail::pat_trie_map< Key, Mapped, Node_And_It_Traits, _Alloc >::node_end ( ) const [inline]

Returns a const node_iterator corresponding to a node just after a leaf of the tree.

Definition at line 115 of file pat_trie_.hpp.

4.817.3.4 template<typename Key , typename Mapped , typename Node_And_It_Traits , typename _Alloc > pat_trie_map< Key, Mapped, Node_And_It_Traits, _Alloc >::node_iterator __gnu_pbds::detail::pat_trie_map< Key, Mapped, Node_And_It_Traits, _Alloc >::node_end ( ) [inline]

Returns a node_iterator corresponding to a node just after a leaf of the tree.

Definition at line 121 of file pat_trie_.hpp.

4.819.1 Detailed Description

template<typename _RealType = double>class std::piecewise_constant_distribution< _RealType >

A piecewise_constant_distribution random number distribution.

The formula for the piecewise constant probability mass function is

Definition at line 5503 of file random.h.

4.819.2 Member Typedef Documentation

4.819.2.1 template<typename _RealType = double> typedef _RealType std::piecewise_constant_distribution< _RealType >::result_type

The type of the range of the distribution.

Definition at line 5506 of file random.h.

4.819.3 Member Function Documentation

4.819.3.1 template<typename _RealType = double> std::vector<double> std::piecewise_constant_distribution< _RealType >::densities ( ) const [inline]

Returns a vector of the probability densities.

Definition at line 5628 of file random.h.

References std::vector< _Tp, _Alloc >::empty().

4.819.3.2 template<typename _RealType = double> std::vector<_RealType> std::piecewise_constant_distribution< _RealType >::intervals ( ) const [inline]

Returns a vector of the intervals.

Definition at line 5612 of file random.h.

References std::vector< _Tp, _Alloc >::empty().

4.819.3.3 template<typename _RealType = double> result_type std::piecewise_constant_distribution< _RealType >::max ( ) const [inline]

Returns the least upper bound value of the distribution.

Definition at line 5663 of file random.h.

References std::vector< _Tp, _Alloc >::back(), and std::vector< _Tp, _Alloc >::empty().

4.819.3.4 template<typename _RealType = double> result_type std::piecewise_constant_distribution< _RealType >::min ( ) const [inline]

Returns the greatest lower bound value of the distribution.

Definition at line 5653 of file random.h.

References std::vector< _Tp, _Alloc >::empty(), and std::vector< _Tp, _Alloc >::front().

4.819.3.5 template<typename _RealType = double> template<typename _UniformRandomNumberGenerator > result_type std::piecewise_constant_distribution< _RealType >::operator() (_UniformRandomNumberGenerator & *__urng*) [inline]

Generating functions.

Definition at line 5674 of file random.h.

4.819.3.6 template<typename _RealType = double> param_type std::piecewise_constant_distribution< _RealType >::param ( ) const [inline]

Returns the parameter set of the distribution.

Definition at line 5638 of file random.h.

4.819.3.7 template<typename _RealType = double> void std::piecewise_constant_distribution< _RealType >::param (const param_type & __param) [inline]

Sets the parameter set of the distribution.

Parameters

__param	The new parameter set of the distribution.

Definition at line 5646 of file random.h.

4.819.3.8 template<typename _RealType = double> void std::piecewise_constant_distribution< _RealType >::reset ( ) [inline]

Resets the distribution state.

Definition at line 5605 of file random.h.

4.819.4 Friends And Related Function Documentation

4.819.4.1 template<typename _RealType = double> template<typename _RealType1 , typename _CharT , typename _Traits > std::basic_ostream<_CharT, _Traits>& operator<< (std::basic_ostream< _CharT, _Traits > & __os, const std::piecewise_constant_distribution< _RealType1 > & __x) [friend]

Inserts a piecewise_constant_distribution random number distribution __x into the output stream __os.

Parameters

__os	An output stream.
__x	A piecewise_constant_distribution random number distribution.

Returns

The output stream with the state of __x inserted or in an error state.

4.819.4.2 template<typename _RealType = double> bool operator== (const piecewise_constant_distribution< _RealType > & __d1, const piecewise_constant_distribution< _RealType > & __d2) [friend]

Return true if two piecewise constant distributions have the same parameters.

Definition at line 5709 of file random.h.

4.819.4.3 template<typename _RealType = double> template<typename _RealType1 , typename _CharT , typename _Traits > std::basic_istream<_CharT, _Traits>& operator>> (std::basic_istream< _CharT, _Traits > & __is, std::piecewise_constant_distribution< _RealType1 > & __x) [friend]

Extracts a piecewise_constant_distribution random number distribution __x from the input stream __is.

Parameters

__is	An input stream.
__x	A piecewise_constant_distribution random number generator engine.

Returns

The input stream with __x extracted or in an error state.

The documentation for this class was generated from the following files:

- random.h
- bits/random.tcc

4.820 std::piecewise_construct_t Struct Reference

4.821.1 Detailed Description

template<typename _RealType = double>class std::piecewise_linear_distribution< _RealType >

A piecewise_linear_distribution random number distribution.

The formula for the piecewise linear probability mass function is

Definition at line 5774 of file random.h.

4.821.2 Member Typedef Documentation

4.821.2.1 template<typename _RealType = double> typedef _RealType std::piecewise_linear_distribution< _RealType >::result_type

The type of the range of the distribution.

Definition at line 5777 of file random.h.

4.821.3 Member Function Documentation

4.821.3.1 template<typename _RealType = double> std::vector<double> std::piecewise_linear_distribution< _RealType >::densities ( ) const [inline]

Return a vector of the probability densities of the distribution.

Definition at line 5901 of file random.h.

References std::vector< _Tp, _Alloc >::empty().

4.821.3.2 template<typename _RealType = double> std::vector<_RealType> std::piecewise_linear_distribution< _RealType >::intervals ( ) const [inline]

Return the intervals of the distribution.

Definition at line 5884 of file random.h.

References std::vector< _Tp, _Alloc >::empty().

4.821.3.3 template<typename _RealType = double> result_type std::piecewise_linear_distribution< _RealType >::max ( ) const [inline]

Returns the least upper bound value of the distribution.

Definition at line 5936 of file random.h.

References std::vector< _Tp, _Alloc >::back(), and std::vector< _Tp, _Alloc >::empty().

4.821.3.4 template<typename _RealType = double> result_type std::piecewise_linear_distribution< _RealType >::min ( ) const [inline]

Returns the greatest lower bound value of the distribution.

Definition at line 5926 of file random.h.

References std::vector< _Tp, _Alloc >::empty(), and std::vector< _Tp, _Alloc >::front().

4.821.3.5 template<typename _RealType = double> template<typename _UniformRandomNumberGenerator > result_type std::piecewise_linear_distribution< _RealType >::operator() (_UniformRandomNumberGenerator & *__urng*) [inline]

Generating functions.

Definition at line 5947 of file random.h.

4.821.3.6 template<typename _RealType = double> param_type std::piecewise_linear_distribution< _RealType >::param ( ) const [inline]

Returns the parameter set of the distribution.

Definition at line 5911 of file random.h.

4.821.3.7 template<typename _RealType = double> void std::piecewise_linear_distribution< _RealType >::param (const param_type & *__param*) [inline]

Sets the parameter set of the distribution.

Parameters

__param	The new parameter set of the distribution.

Definition at line 5919 of file random.h.

4.821.3.8 template<typename _RealType = double> void std::piecewise_linear_distribution< _RealType >::reset ( ) [inline]

Resets the distribution state.

Definition at line 5877 of file random.h.

4.821.4 Friends And Related Function Documentation

4.821.4.1 template<typename _RealType = double> template<typename _RealType1 , typename _CharT , typename _Traits > std::basic_ostream<_CharT, _Traits>& operator<< (std::basic_ostream< _CharT, _Traits > & *__os,* const std::piecewise_linear_distribution< _RealType1 > & *__x*) [friend]

Inserts a piecewise_linear_distribution random number distribution __x into the output stream __os.

Parameters

__os	An output stream.
__x	A piecewise_linear_distribution random number distribution.

Returns

The output stream with the state of __x inserted or in an error state.

4.821.4.2 template<typename _RealType = double> bool operator== (const piecewise_linear_distribution< _RealType > & *__d1*, const piecewise_linear_distribution< _RealType > & *__d2*) [friend]

Return true if two piecewise linear distributions have the same parameters.

Definition at line 5982 of file random.h.

4.821.4.3 template<typename _RealType = double> template<typename _RealType1 , typename _CharT , typename _Traits > std::basic_istream<_CharT, _Traits>& operator>> (std::basic_istream< _CharT, _Traits > & *__is*, std::piecewise_linear_distribution< _RealType1 > & *__x*) [friend]

Extracts a piecewise_linear_distribution random number distribution __x from the input stream __is.

Parameters

__is	An input stream.
__x	A piecewise_linear_distribution random number generator engine.

Returns

The input stream with __x extracted or in an error state.

Returns the parameter set of the distribution.

Definition at line 4492 of file random.h.

4.828.3.7 template<typename _IntType = int> void std::poisson_distribution< _IntType >::param (const param_type & *__param*) [inline]

Sets the parameter set of the distribution.

Parameters

__param	The new parameter set of the distribution.

Definition at line 4500 of file random.h.

4.828.3.8 template<typename _IntType = int> void std::poisson_distribution< _IntType >::reset ( ) [inline]

Resets the distribution state.

Definition at line 4478 of file random.h.

References std::normal_distribution< _RealType >::reset().

4.828.4 Friends And Related Function Documentation

4.828.4.1 template<typename _IntType = int> template<typename _IntType1 , typename _CharT , typename _Traits > std::basic_ostream<_CharT, _Traits>& operator<< (std::basic_ostream< _CharT, _Traits > & *__os*, const std::poisson_distribution< _IntType1 > & *__x*) [friend]

Inserts a poisson_distribution random number distribution __x into the output stream __os.

Parameters

__os	An output stream.
__x	A poisson_distribution random number distribution.

Returns

The output stream with the state of __x inserted or in an error state.

4.828.4.2 template<typename _IntType = int> bool operator== (const poisson_distribution< _IntType > & *__d1*, const poisson_distribution< _IntType > & *__d2*) [friend]

Return true if two Poisson distributions have the same parameters and the sequences that would be generated are equal.

Definition at line 4558 of file random.h.

4.828.4.3 template<typename _IntType = int> template<typename _IntType1 , typename _CharT , typename _Traits > std::basic_istream<_CharT, _Traits>& operator>> (std::basic_istream< _CharT, _Traits > & *__is*, std::poisson_distribution< _IntType1 > & *__x*) [friend]

Extracts a poisson_distribution random number distribution __x from the input stream __is.

Parameters

__is	An input stream.
__x	A poisson_distribution random number generator engine.

Returns

The input stream with __x extracted or in an error state.

4.830.1 Detailed Description

template<typename _Tp, typename _Sequence = vector<_Tp>, typename _Compare = less<typename _Sequence::value_type>>class std::priority_queue< _Tp, _Sequence, _Compare >

A standard container automatically sorting its contents.

Template Parameters

_Tp	Type of element.
_Sequence	Type of underlying sequence, defaults to vector<_Tp>.
_Compare	Comparison function object type, defaults to less<_Sequence::value_type>.

This is not a true container, but an *adaptor*. It holds another container, and provides a wrapper interface to that container. The wrapper is what enforces priority-based sorting and queue behavior. Very few of the standard container/sequence interface requirements are met (e.g., iterators).

The second template parameter defines the type of the underlying sequence/container. It defaults to std::vector, but it can be any type that supports `front()`, `push_back`, `pop_back`, and random-access iterators, such as std::deque or an appropriate user-defined type.

The third template parameter supplies the means of making priority comparisons. It defaults to `less<value_type>` but can be anything defining a strict weak ordering.

Members not found in *normal* containers are `container_type`, which is a typedef for the second Sequence parameter, and `push`, `pop`, and `top`, which are standard queue operations.

Note

No equality/comparison operators are provided for priority_queue.
Sorting of the elements takes place as they are added to, and removed from, the priority_queue using the priority_queue's member functions. If you access the elements by other means, and change their data such that the sorting order would be different, the priority_queue will not re-sort the elements for you. (How could it know to do so?)

Definition at line 456 of file stl_queue.h.

4.830.2 Constructor & Destructor Documentation

4.830.2.1 template<typename _Tp, typename _Sequence = vector<_Tp>, typename _Compare = less<typename _Sequence::value_type>> template<typename _Seq = _Sequence, typename _Requires = typename enable_if<__and_<is_default_constructible<_Compare>, is_default_constructible<_Seq>>::value>::type> std::priority_queue< _Tp, _Sequence, _Compare >::priority_queue ( ) [inline]

Default constructor creates no elements.

Definition at line 514 of file stl_queue.h.

4.830.2.2 template<typename _Tp, typename _Sequence = vector<_Tp>, typename _Compare = less<typename _Sequence::value_type>> template<typename _InputIterator > std::priority_queue< _Tp, _Sequence, _Compare >::priority_queue (_InputIterator *__first,* _InputIterator *__last,* const _Compare & *__x,* const _Sequence & *__s*) [inline]

Builds a queue from a range.

Parameters

__first	An input iterator.
__last	An input iterator.
__x	A comparison functor describing a strict weak ordering.
__s	An initial sequence with which to start.

Begins by copying *__s*, inserting a copy of the elements from [first,last) into the copy of *__s*, then ordering the copy according to *__x*.

For more information on function objects, see the documentation on functor base classes.

Definition at line 586 of file stl_queue.h.

References std::make_heap().

4.830.3 Member Function Documentation

4.830.3.1 template<typename _Tp, typename _Sequence = vector<_Tp>, typename _Compare = less<typename _Sequence::value_type>> bool std::priority_queue< _Tp, _Sequence, _Compare >::empty ( ) const [inline]

Returns true if the queue is empty.

Definition at line 612 of file stl_queue.h.

Referenced by __gnu_parallel::multiseq_partition(), and __gnu_parallel::multiseq_selection().

4.830.3.2 template<typename _Tp, typename _Sequence = vector<_Tp>, typename _Compare = less<typename _Sequence::value_type>> void std::priority_queue< _Tp, _Sequence, _Compare >::pop ( ) [inline]

Removes first element.

This is a typical queue operation. It shrinks the queue by one. The time complexity of the operation depends on the underlying sequence.

Note that no data is returned, and if the first element's data is needed, it should be retrieved before pop() is called.

Definition at line 675 of file stl_queue.h.

References std::pop_heap().

Referenced by __gnu_parallel::multiseq_partition(), and __gnu_parallel::multiseq_selection().

4.830.3.3 template<typename _Tp, typename _Sequence = vector<_Tp>, typename _Compare = less<typename _Sequence::value_type>> void std::priority_queue< _Tp, _Sequence, _Compare >::push (const value_type & __x) [inline]

Add data to the queue.

Parameters

__x	Data to be added.

This is a typical queue operation. The time complexity of the operation depends on the underlying sequence.

Definition at line 640 of file stl_queue.h.

References std::push_heap().

Referenced by __gnu_parallel::multiseq_partition(), and __gnu_parallel::multiseq_selection().

4.830.3.4 template<typename _Tp, typename _Sequence = vector<_Tp>, typename _Compare = less<typename _Sequence::value_type>> size_type std::priority_queue< _Tp, _Sequence, _Compare >::size ( ) const [inline]

Returns the number of elements in the queue.

Definition at line 617 of file stl_queue.h.

4.830.3.5 template<typename _Tp, typename _Sequence = vector<_Tp>, typename _Compare = less<typename _Sequence::value_type>> const_reference std::priority_queue< _Tp, _Sequence, _Compare >::top ( ) const [inline]

Returns a read-only (constant) reference to the data at the first element of the queue.

Definition at line 625 of file stl_queue.h.

Referenced by __gnu_parallel::multiseq_partition(), and __gnu_parallel::multiseq_selection().

4.840.1 Detailed Description

template<typename _Tp, typename _Sequence = deque<_Tp>>class std::queue< _Tp, _Sequence >

A standard container giving FIFO behavior.

Template Parameters

_Tp	Type of element.
_Sequence	Type of underlying sequence, defaults to deque<_Tp>.

Meets many of the requirements of a `container`, but does not define anything to do with iterators. Very few of the other standard container interfaces are defined.

This is not a true container, but an *adaptor*. It holds another container, and provides a wrapper interface to that container. The wrapper is what enforces strict first-in-first-out queue behavior.

The second template parameter defines the type of the underlying sequence/container. It defaults to std::deque, but it can be any type that supports `front`, `back`, `push_back`, and `pop_front`, such as std::list or an appropriate user-defined type.

Members not found in *normal* containers are `container_type`, which is a typedef for the second Sequence parameter, and `push` and `pop`, which are standard queue/FIFO operations.

Definition at line 96 of file stl_queue.h.

4.840.2 Constructor & Destructor Documentation

4.840.2.1 template<typename _Tp, typename _Sequence = deque<_Tp>> template<typename _Seq = _Sequence, typename _Requires = typename enable_if<is_default_constructible<_Seq>::value>::type> std::queue< _Tp, _Sequence >::queue ( ) [inline]

Default constructor creates no elements.

Definition at line 166 of file stl_queue.h.

4.840.3 Member Function Documentation

4.840.3.1 template<typename _Tp, typename _Sequence = deque<_Tp>> reference std::queue< _Tp, _Sequence >::back ( ) [inline]

Returns a read/write reference to the data at the last element of the queue.

Definition at line 238 of file stl_queue.h.

References std::queue< _Tp, _Sequence >::c.

4.840.3.2 template<typename _Tp, typename _Sequence = deque<_Tp>> const_reference std::queue< _Tp, _Sequence >::back ( ) const [inline]

Returns a read-only (constant) reference to the data at the last element of the queue.

Definition at line 249 of file stl_queue.h.

References std::queue< _Tp, _Sequence >::c.

4.840.3.3 template<typename _Tp, typename _Sequence = deque<_Tp>> bool std::queue< _Tp, _Sequence >::empty ( ) const [inline]

Returns true if the queue is empty.

Definition at line 203 of file stl_queue.h.

References std::queue< _Tp, _Sequence >::c.

4.840.3.4 template<typename _Tp, typename _Sequence = deque<_Tp>> reference std::queue< _Tp, _Sequence >::front ( ) [inline]

Returns a read/write reference to the data at the first element of the queue.

Definition at line 216 of file stl_queue.h.

References std::queue< _Tp, _Sequence >::c.

4.840.3.5 template<typename _Tp, typename _Sequence = deque<_Tp>> const_reference std::queue< _Tp, _Sequence >::front ( ) const [inline]

Returns a read-only (constant) reference to the data at the first element of the queue.

Definition at line 227 of file stl_queue.h.

References std::queue< _Tp, _Sequence >::c.

4.840.3.6 template<typename _Tp, typename _Sequence = deque<_Tp>> void std::queue< _Tp, _Sequence >::pop ( ) [inline]

Removes first element.

This is a typical queue operation. It shrinks the queue by one. The time complexity of the operation depends on the underlying sequence.

Note that no data is returned, and if the first element's data is needed, it should be retrieved before pop() is called.

Definition at line 298 of file stl_queue.h.

References std::queue< _Tp, _Sequence >::c.

4.840.3.7 template<typename _Tp, typename _Sequence = deque<_Tp>> void std::queue< _Tp, _Sequence >::push (const value_type & __x) [inline]

Add data to the end of the queue.

Parameters

__x	Data to be added.

This is a typical queue operation. The function creates an element at the end of the queue and assigns the given data to it. The time complexity of the operation depends on the underlying sequence.

Definition at line 265 of file stl_queue.h.

References std::queue< _Tp, _Sequence >::c.

4.840.3.8 template<typename _Tp, typename _Sequence = deque<_Tp>> size_type std::queue< _Tp, _Sequence >::size ( ) const [inline]

Returns the number of elements in the queue.

Definition at line 208 of file stl_queue.h.

References std::queue< _Tp, _Sequence >::c.

4.840.4 Member Data Documentation

4.840.4.1 template<typename _Tp, typename _Sequence = deque<_Tp>> _Sequence std::queue< _Tp, _Sequence >::c [protected]

`c` is the underlying container.

Definition at line 153 of file stl_queue.h.

Referenced by std::queue< _Tp, _Sequence >::back(), std::queue< _Tp, _Sequence >::empty(), std::queue< _Tp, _Sequence >::front(), std::operator<(), std::operator==(), std::queue< _Tp, _Sequence >::pop(), std::queue< _Tp, _Sequence >::push(), and std::queue< _Tp, _Sequence >::size().

4.857 std::ratio< _Num, _Den > Struct Template Reference

Public Types

- typedef ratio< num, den > **type**

Static Public Attributes

- static constexpr intmax_t **den**
- static constexpr intmax_t **num**

4.857.1 Detailed Description

template<intmax_t _Num, intmax_t _Den = 1>struct std::ratio< _Num, _Den >

Provides compile-time rational arithmetic.

This class template represents any finite rational number with a numerator and denominator representable by compile-time constants of type intmax_t. The ratio is simplified when instantiated.

For example:

```
std::ratio<7,-21>::num == -1;
std::ratio<7,-21>::den == 3;
```

Definition at line 266 of file ratio.

4.864.1 Detailed Description

template<class _OutputIterator, class _Tp>class std::raw_storage_iterator< _OutputIterator, _Tp >

This iterator class lets algorithms store their results into uninitialized memory.

Definition at line 68 of file stl_raw_storage_iter.h.

4.864.2 Member Typedef Documentation

4.864.2.1 typedef void std::iterator< output_iterator_tag , void , void , void , void >::difference_type [inherited]

Distance between iterators is represented as this type.

Definition at line 134 of file stl_iterator_base_types.h.

4.864.2.2 typedef output_iterator_tag std::iterator< output_iterator_tag , void , void , void , void >::iterator_category [inherited]

One of the tag types.

Definition at line 130 of file stl_iterator_base_types.h.

4.864.2.3 typedef void std::iterator< output_iterator_tag , void , void , void , void >::pointer [inherited]

This type represents a pointer-to-value_type.

Definition at line 136 of file stl_iterator_base_types.h.

4.864.2.4 typedef void std::iterator< output_iterator_tag , void , void , void , void >::reference [inherited]

This type represents a reference-to-value_type.

Definition at line 138 of file stl_iterator_base_types.h.

4.864.2.5 typedef void std::iterator< output_iterator_tag , void , void , void , void >::value_type [inherited]

The type "pointed to" by the iterator.

Definition at line 132 of file stl_iterator_base_types.h.

The documentation for this class was generated from the following file:

- stl_raw_storage_iter.h

4.865 __gnu_cxx::rb_tree< _Key, _Value, _KeyOfValue, _Compare, _Alloc > Struct Template Reference

4.866.1 Detailed Description

template<typename Key, typename Mapped, typename Cmp_Fn, typename Node_And_It_Traits, typename _Alloc>class __gnu_pbds::detail::rb_tree_map< Key, Mapped, Cmp_Fn, Node_And_It_Traits, _Alloc >

Red-Black tree.

This implementation uses an idea from the SGI STL (using a *header* node which is needed for efficient iteration).

Definition at line 84 of file rb_tree_.hpp.

4.866.2 Member Function Documentation

4.866.2.1 template<typename Key , typename Mapped , typename Cmp_Fn , typename Node_And_It_Traits , typename _Alloc > bin_search_tree_map< Key, Mapped, Cmp_Fn, Node_And_It_Traits, _Alloc >::node_const_iterator __gnu_pbds::detail::bin_search_tree_map< Key, Mapped, Cmp_Fn, Node_And_It_Traits, _Alloc >::node_begin ( ) const [inline], [inherited]

Returns a const node_iterator corresponding to the node at the root of the tree.

Definition at line 111 of file bin_search_tree_.hpp.

4.866.2.2 template<typename Key , typename Mapped , typename Cmp_Fn , typename Node_And_It_Traits , typename _Alloc > bin_search_tree_map< Key, Mapped, Cmp_Fn, Node_And_It_Traits, _Alloc >::node_iterator __gnu_pbds::detail::bin_search_tree_map< Key, Mapped, Cmp_Fn, Node_And_It_Traits, _Alloc >::node_begin ( ) [inline], [inherited]

Returns a node_iterator corresponding to the node at the root of the tree.

Definition at line 119 of file bin_search_tree_.hpp.

4.866.2.3 template<typename Key , typename Mapped , typename Cmp_Fn , typename Node_And_It_Traits , typename _Alloc > bin_search_tree_map< Key, Mapped, Cmp_Fn, Node_And_It_Traits, _Alloc >::node_const_iterator __gnu_pbds::detail::bin_search_tree_map< Key, Mapped, Cmp_Fn, Node_And_It_Traits, _Alloc >::node_end ( ) const [inline], [inherited]

Returns a const node_iterator corresponding to a node just after a leaf of the tree.

Definition at line 127 of file bin_search_tree_.hpp.

4.866.2.4 template<typename Key , typename Mapped , typename Cmp_Fn , typename Node_And_It_Traits , typename _Alloc > bin_search_tree_map< Key, Mapped, Cmp_Fn, Node_And_It_Traits, _Alloc >::node_iterator __gnu_pbds::detail::bin_search_tree_map< Key, Mapped, Cmp_Fn, Node_And_It_Traits, _Alloc >::node_end ( ) [inline], [inherited]

Returns a node_iterator corresponding to a node just after a leaf of the tree.

Definition at line 135 of file bin_search_tree_.hpp.

The documentation for this class was generated from the following file:

- rb_tree_.hpp

4.876 std::bitset< _Nb >::reference Class Reference

Public Member Functions

- **reference** (bitset &__b, size_t __pos) noexcept
- **reference** (const reference &)=default
- reference & **flip** () noexcept
- **operator bool** () const noexcept
- reference & **operator=** (bool __x) noexcept
- reference & **operator=** (const reference &__j) noexcept
- bool **operator~** () const noexcept

Friends

- class **bitset**

4.876.1 Detailed Description

template<size_t _Nb>class std::bitset< _Nb >::reference

This encapsulates the concept of a single bit. An instance of this class is a proxy for an actual bit; this way the individual bit operations are done as faster word-size bitwise instructions.

Most users will never need to use this class directly; conversions to and from bool are automatic and should be transparent. Overloaded operators help to preserve the illusion.

(On a typical system, this *bit reference* is 64 times the size of an actual bit. Ha.)

Definition at line 802 of file bitset.

The documentation for this class was generated from the following file:

- bitset

4.877 std::tr2::dynamic_bitset< _WordT, _Alloc >::reference Class Reference

Public Member Functions

Denotes a reference should be taken to a variable.

Definition at line 364 of file refwrap.h.

4.878.2.4 template<typename _Tp > constexpr reference_wrapper< _Tp > ref (reference_wrapper< _Tp > __t) [related]

std::ref overload to prevent wrapping a reference_wrapper

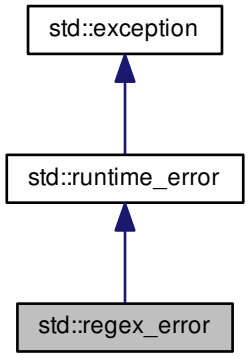
Definition at line 384 of file refwrap.h.

The documentation for this class was generated from the following files:

- type_traits
- refwrap.h

4.879 std::regex_error Class Reference

Inheritance diagram for std::regex_error:



Public Member Functions

- regex_error (regex_constants::error_type __ecode)
- regex_constants::error_type code () const
- virtual const char * what () const noexcept

Friends

- void **__throw_regex_error** (regex_constants::error_type, const char *)

4.879.1 Detailed Description

A regular expression exception class.

The regular expression library throws objects of this class on error.

Definition at line 132 of file regex_error.h.

4.879.2 Constructor & Destructor Documentation

4.879.2.1 std::regex_error::regex_error (**regex_constants::error_type** *__ecode*) [explicit]

Constructs a regex_error object.

Parameters

__ecode	the regex error code.

4.879.3 Member Function Documentation

4.879.3.1 regex_constants::error_type std::regex_error::code ( ) const [inline]

Gets the regex error code.

Returns

the regex error code.

Definition at line 153 of file regex_error.h.

4.879.3.2 virtual const char* std::runtime_error::what ( ) const [virtual], [noexcept], [inherited]

Returns a C-style character string describing the general cause of the current error (the same string passed to the ctor).

Reimplemented from std::exception.

The documentation for this class was generated from the following file:

- regex_error.h

4.880 std::regex_iterator< _Bi_iter, _Ch_type, _Rx_traits > Class Template Reference

4.880.1 Detailed Description

template<typename _Bi_iter, typename _Ch_type = typename iterator_traits<_Bi_iter>::value_type, typename _Rx_traits = regex_traits<_Ch_type>>class std::regex_iterator< _Bi_iter, _Ch_type, _Rx_traits >

An iterator adaptor that will provide repeated calls of regex_search over a range until no more matches remain.

Definition at line 2625 of file regex.h.

4.880.2 Constructor & Destructor Documentation

4.880.2.1 template<typename _Bi_iter , typename _Ch_type = typename iterator_traits<_Bi_iter>::value_type, typename _Rx_traits = regex_traits<_Ch_type>> std::regex_iterator< _Bi_iter, _Ch_type, _Rx_traits >::regex_iterator ( ) [default]

Provides a singular iterator, useful for indicating one-past-the-end of a range.

Referenced by std::regex_iterator< _Bi_iter, _Ch_type, _Rx_traits >::regex_iterator().

4.880.2.2 template<typename _Bi_iter , typename _Ch_type = typename iterator_traits<_Bi_iter>::value_type, typename _Rx_traits = regex_traits<_Ch_type>> std::regex_iterator< _Bi_iter, _Ch_type, _Rx_traits >::regex_iterator (_Bi_iter *__a*, _Bi_iter *__b*, const regex_type & *__re*, regex_constants::match_flag_type *__m* = regex_constants::match_default) [inline]

Constructs a regex_iterator...

Parameters

__a	[IN] The start of a text range to search.
__b	[IN] One-past-the-end of the text range to search.
__re	[IN] The regular expression to match.
__m	[IN] Policy flags for match rules.

Definition at line 2648 of file regex.h.

References std::regex_iterator< _Bi_iter, _Ch_type, _Rx_traits >::regex_iterator(), and std::regex_search().

4.880.2.3 template<typename _Bi_iter , typename _Ch_type = typename iterator_traits<_Bi_iter>::value_type, typename _Rx_traits = regex_traits<_Ch_type>> std::regex_iterator< _Bi_iter, _Ch_type, _Rx_traits >::regex_iterator (const regex_iterator< _Bi_iter, _Ch_type, _Rx_traits > &) [default]

Copy constructs a regex_iterator.

4.880.3 Member Function Documentation

4.880.3.1 template<typename _Bi_iter , typename _Ch_type = typename iterator_traits<_Bi_iter>::value_type, typename _Rx_traits = regex_traits<_Ch_type>> bool std::regex_iterator< _Bi_iter, _Ch_type, _Rx_traits >::operator!= (const regex_iterator< _Bi_iter, _Ch_type, _Rx_traits > & *__rhs*) const [inline], [noexcept]

Tests the inequivalence of two regex iterators.

Definition at line 2682 of file regex.h.

4.880.3.2 template<typename _Bi_iter , typename _Ch_type = typename iterator_traits<_Bi_iter>::value_type, typename _Rx_traits = regex_traits<_Ch_type>> const value_type& std::regex_iterator< _Bi_iter, _Ch_type, _Rx_traits >::operator* ( ) const [inline],[noexcept]

Dereferences a regex_iterator.

Definition at line 2689 of file regex.h.

4.880.3.3 template<typename _Bi_iter , typename _Ch_type = typename iterator_traits<_Bi_iter>::value_type, typename _Rx_traits = regex_traits<_Ch_type>> regex_iterator& std::regex_iterator< _Bi_iter, _Ch_type, _Rx_traits >::operator++ ( )

Increments a regex_iterator.

4.880.3.4 template<typename _Bi_iter , typename _Ch_type = typename iterator_traits<_Bi_iter>::value_type, typename _Rx_traits = regex_traits<_Ch_type>> regex_iterator std::regex_iterator< _Bi_iter, _Ch_type, _Rx_traits >::operator++ (int) [inline]

Postincrements a regex_iterator.

Definition at line 2709 of file regex.h.

4.880.3.5 template<typename _Bi_iter , typename _Ch_type = typename iterator_traits<_Bi_iter>::value_type, typename _Rx_traits = regex_traits<_Ch_type>> const value_type* std::regex_iterator< _Bi_iter, _Ch_type, _Rx_traits >::operator-> ( ) const [inline],[noexcept]

Selects a regex_iterator member.

Definition at line 2696 of file regex.h.

4.880.3.6 template<typename _Bi_iter , typename _Ch_type = typename iterator_traits<_Bi_iter>::value_type, typename _Rx_traits = regex_traits<_Ch_type>> regex_iterator& std::regex_iterator< _Bi_iter, _Ch_type, _Rx_traits >::operator= (const regex_iterator< _Bi_iter, _Ch_type, _Rx_traits > &) [default]

Copy assigns one regex_iterator to another.

4.880.3.7 template<typename _Bi_iter , typename _Ch_type = typename iterator_traits<_Bi_iter>::value_type, typename _Rx_traits = regex_traits<_Ch_type>> bool std::regex_iterator< _Bi_iter, _Ch_type, _Rx_traits >::operator== (const regex_iterator< _Bi_iter, _Ch_type, _Rx_traits > &) const [noexcept]

Tests the equivalence of two regex iterators.

The documentation for this class was generated from the following file:

- regex.h

4.881.1 Detailed Description

template<typename _Bi_iter, typename _Ch_type = typename iterator_traits<_Bi_iter>::value_type, typename _Rx_traits = regex_traits<_Ch_type>>class std::regex_token_iterator< _Bi_iter, _Ch_type, _Rx_traits >

Iterates over submatches in a range (or *splits* a text string).

The purpose of this iterator is to enumerate all, or all specified, matches of a regular expression within a text range. The dereferenced value of an iterator of this class is a std::sub_match object.

Definition at line 2742 of file regex.h.

4.881.2 Constructor & Destructor Documentation

4.881.2.1 template<typename _Bi_iter , typename _Ch_type = typename iterator_traits<_Bi_iter>::value_type, typename _Rx_traits = regex_traits<_Ch_type>> std::regex_token_iterator< _Bi_iter, _Ch_type, _Rx_traits >::regex_token_iterator ( ) [inline]

Default constructs a regex_token_iterator.

A default-constructed regex_token_iterator is a singular iterator that will compare equal to the one-past-the-end value for any iterator of the same type.

Definition at line 2760 of file regex.h.

4.881.2.2 template<typename _Bi_iter , typename _Ch_type = typename iterator_traits<_Bi_iter>::value_type, typename _Rx_traits = regex_traits<_Ch_type>> std::regex_token_iterator< _Bi_iter, _Ch_type, _Rx_traits >::regex_token_iterator (_Bi_iter __a, _Bi_iter __b, const regex_type & __re, int __submatch = 0, regex_constants::match_flag_type __m = regex_constants::match_default) [inline]

Constructs a regex_token_iterator...

Parameters

__a	[IN] The start of the text to search.
__b	[IN] One-past-the-end of the text to search.
__re	[IN] The regular expression to search for.
__submatch	[IN] Which submatch to return. There are some special values for this parameter: • -1 each enumerated subexpression does NOT match the regular expression (aka field splitting) • 0 the entire string matching the subexpression is returned for each match within the text. • >0 enumerates only the indicated subexpression from a match within the text.
__m	[IN] Policy flags for match rules.

Definition at line 2782 of file regex.h.

4.881.2.3 template<typename _Bi_iter , typename _Ch_type = typename iterator_traits<_Bi_iter>::value_type, typename _Rx_traits = regex_traits<_Ch_type>> std::regex_token_iterator< _Bi_iter, _Ch_type, _Rx_traits >::regex_token_iterator (_Bi_iter *__a*, _Bi_iter *__b*, const regex_type & *__re*, const std::vector< int > & *__submatches*, regex_constants::match_flag_type *__m* = regex_constants::match_default) [inline]

Constructs a regex_token_iterator...

Parameters

__a	[IN] The start of the text to search.
__b	[IN] One-past-the-end of the text to search.
__re	[IN] The regular expression to search for.
__submatches	[IN] A list of subexpressions to return for each regular expression match within the text.
__m	[IN] Policy flags for match rules.

Definition at line 2798 of file regex.h.

4.881.2.4 template<typename _Bi_iter , typename _Ch_type = typename iterator_traits<_Bi_iter>::value_type, typename _Rx_traits = regex_traits<_Ch_type>> std::regex_token_iterator< _Bi_iter, _Ch_type, _Rx_traits >::regex_token_iterator (_Bi_iter *__a*, _Bi_iter *__b*, const regex_type & *__re*, initializer_list< int > *__submatches*, regex_constants::match_flag_type *__m* = regex_constants::match_default) [inline]

Constructs a regex_token_iterator...

Parameters

__a	[IN] The start of the text to search.
__b	[IN] One-past-the-end of the text to search.
__re	[IN] The regular expression to search for.
__submatches	[IN] A list of subexpressions to return for each regular expression match within the text.
__m	[IN] Policy flags for match rules.

Definition at line 2815 of file regex.h.

4.881.2.5 template<typename _Bi_iter , typename _Ch_type = typename iterator_traits<_Bi_iter>::value_type, typename _Rx_traits = regex_traits<_Ch_type>> template<std::size_t _Nm> std::regex_token_iterator< _Bi_iter, _Ch_type, _Rx_traits >::regex_token_iterator (_Bi_iter *__a*, _Bi_iter *__b*, const regex_type & *__re*, const int(&) *__submatches[_Nm]*, regex_constants::match_flag_type *__m* = regex_constants::match_default) [inline]

Constructs a regex_token_iterator...

Parameters

__a	[IN] The start of the text to search.
__b	[IN] One-past-the-end of the text to search.
__re	[IN] The regular expression to search for.
__submatches	[IN] A list of subexpressions to return for each regular expression match within the text.
__m	[IN] Policy flags for match rules.

Definition at line 2833 of file regex.h.

4.881.2.6 template<typename _Bi_iter , typename _Ch_type = typename iterator_traits<_Bi_iter>::value_type, typename _Rx_traits = regex_traits<_Ch_type>> std::regex_token_iterator< _Bi_iter, _Ch_type, _Rx_traits >::regex_token_iterator (const regex_token_iterator< _Bi_iter, _Ch_type, _Rx_traits > & *__rhs*) [inline]

Copy constructs a regex_token_iterator.

Parameters

__rhs	[IN] A regex_token_iterator to copy.

Definition at line 2865 of file regex.h.

4.881.3 Member Function Documentation

4.881.3.1 template<typename _Bi_iter , typename _Ch_type = typename iterator_traits<_Bi_iter>::value_type, typename _Rx_traits = regex_traits<_Ch_type>> bool std::regex_token_iterator< _Bi_iter, _Ch_type, _Rx_traits >::operator!= (const regex_token_iterator< _Bi_iter, _Ch_type, _Rx_traits > & *__rhs*) const [inline]

Compares a regex_token_iterator to another for inequality.

Definition at line 2887 of file regex.h.

4.881.3.2 template<typename _Bi_iter , typename _Ch_type = typename iterator_traits<_Bi_iter>::value_type, typename _Rx_traits = regex_traits<_Ch_type>> const value_type& std::regex_token_iterator< _Bi_iter, _Ch_type, _Rx_traits >::operator* ( ) const [inline]

Dereferences a regex_token_iterator.

Definition at line 2894 of file regex.h.

4.881.3.3 template<typename _Bi_iter , typename _Ch_type = typename iterator_traits<_Bi_iter>::value_type, typename _Rx_traits = regex_traits<_Ch_type>> regex_token_iterator& std::regex_token_iterator< _Bi_iter, _Ch_type, _Rx_traits >::operator++ ( )

Increments a regex_token_iterator.

4.881.3.4 template<typename _Bi_iter , typename _Ch_type = typename iterator_traits<_Bi_iter>::value_type, typename _Rx_traits = regex_traits<_Ch_type>> regex_token_iterator std::regex_token_iterator< _Bi_iter, _Ch_type, _Rx_traits >::operator++ (int) [inline]

Postincrements a regex_token_iterator.

Definition at line 2914 of file regex.h.

4.881.3.5 template<typename _Bi_iter , typename _Ch_type = typename iterator_traits<_Bi_iter>::value_type, typename _Rx_traits = regex_traits<_Ch_type>> const value_type* std::regex_token_iterator< _Bi_iter, _Ch_type, _Rx_traits >::operator-> ( ) const [inline]

Selects a regex_token_iterator member.

Definition at line 2901 of file regex.h.

4.881.3.6 template<typename _Bi_iter , typename _Ch_type = typename iterator_traits<_Bi_iter>::value_type, typename _Rx_traits = regex_traits<_Ch_type>> regex_token_iterator& std::regex_token_iterator< _Bi_iter, _Ch_type, _Rx_traits >::operator= (const regex_token_iterator< _Bi_iter, _Ch_type, _Rx_traits > & *__rhs*)

Assigns a regex_token_iterator to another.

Parameters

__rhs	[IN] A regex_token_iterator to copy.

4.881.3.7 template<typename _Bi_iter , typename _Ch_type = typename iterator_traits<_Bi_iter>::value_type, typename _Rx_traits = regex_traits<_Ch_type>> bool std::regex_token_iterator< _Bi_iter, _Ch_type, _Rx_traits >::operator== (const regex_token_iterator< _Bi_iter, _Ch_type, _Rx_traits > & *__rhs*) const

Compares a regex_token_iterator to another for equality.

4.882.1 Detailed Description

template<typename _Ch_type>class std::regex_traits< _Ch_type >

Describes aspects of a regular expression.

A regular expression traits class that satisfies the requirements of section [28.7].

The class regex is parameterized around a set of related types and functions used to complete the definition of its semantics. This class satisfies the requirements of such a traits class.

Definition at line 80 of file regex.h.

4.882.2 Constructor & Destructor Documentation

4.882.2.1 template<typename _Ch_type> std::regex_traits< _Ch_type >::regex_traits ( ) [inline]

Constructs a default traits object.

Definition at line 159 of file regex.h.

4.882.3 Member Function Documentation

4.882.3.1 template<typename _Ch_type> locale_type std::regex_traits< _Ch_type >::getloc ( ) const [inline]

Gets a copy of the current locale in use by the regex_traits object.

Definition at line 372 of file regex.h.

4.882.3.2 template<typename _Ch_type> locale_type std::regex_traits< _Ch_type >::imbue (locale_type *__loc*) [inline]

Imbues the regex_traits object with a copy of a new locale.

Parameters

__loc	A locale.

Returns

a copy of the previous locale in use by the regex_traits object.

Note

Calling imbue with a different locale than the one currently in use invalidates all cached data held by *this.

Definition at line 361 of file regex.h.

4.882.3.3 template<typename _Ch_type> bool std::regex_traits< _Ch_type >::isctype (_Ch_type __c, char_class_type __f) const

Determines if c is a member of an identified class.

Parameters

__c	a character.
__f	a class type (as returned from lookup_classname).

Returns

true if the character __c is a member of the classification represented by __f, false otherwise.

Exceptions

std::bad_cast	if the current locale does not have a ctype facet.

4.882.3.4 template<typename _Ch_type> static std::size_t std::regex_traits< _Ch_type >::length (const char_type * __p) [inline], [static]

Gives the length of a C-style string starting at __p.

Parameters

__p	a pointer to the start of a character sequence.

Returns

the number of characters between *__p and the first default-initialized value of type char_type. In other words, uses the C-string algorithm for determining the length of a sequence of characters.

Definition at line 172 of file regex.h.

4.882.3.5 template<typename _Ch_type> template<typename _Fwd_iter > char_class_type std::regex_traits< _Ch_type >::lookup_classname (_Fwd_iter *__first*, _Fwd_iter *__last*, bool *__icase* = false) const

Maps one or more characters to a named character classification.

Parameters

__first	beginning of the character sequence.
__last	one-past-the-end of the character sequence.
__icase	ignores the case of the classification name.

Returns

an unspecified value that represents the character classification named by the character sequence designated by the iterator range [__first, __last). If icase is true, the returned mask identifies the classification regardless of the case of the characters to be matched (for example, [[:lower:]] is the same as [[:alpha:]]), otherwise a case-dependent classification is returned. The value returned shall be independent of the case of the characters in the character sequence. If the name is not recognized then returns a value that compares equal to 0.

At least the following names (or their wide-character equivalent) are supported.

- d
- w
- s
- alnum

- alpha
- blank
- cntrl
- digit
- graph
- lower
- print
- punct
- space
- upper
- xdigit

4.882.3.6 template<typename _Ch_type> template<typename _Fwd_iter > string_type std::regex_traits< _Ch_type >::lookup_collatename (_Fwd_iter __first, _Fwd_iter __last) const

Gets a collation element by name.

Parameters

__first	beginning of the collation element name.
__last	one-past-the-end of the collation element name.

Returns

a sequence of one or more characters that represents the collating element consisting of the character sequence designated by the iterator range [__first, __last). Returns an empty string if the character sequence is not a valid collating element.

4.882.3.7 template<typename _Ch_type> template<typename _Fwd_iter > string_type std::regex_traits< _Ch_type >::transform (_Fwd_iter __first, _Fwd_iter __last) const [inline]

Gets a sort key for a character sequence.

Parameters

__first	beginning of the character sequence.
__last	one-past-the-end of the character sequence.

Returns a sort key for the character sequence designated by the iterator range [F1, F2) such that if the character sequence [G1, G2) sorts before the character sequence [H1, H2) then v.transform(G1, G2) < v.transform(H1, H2).

What this really does is provide a more efficient way to compare a string to multiple other strings in locales with fancy collation rules and equivalence classes.

Returns

a locale-specific sort key equivalent to the input range.

Exceptions

std::bad_cast	if the current locale does not have a collate facet.

Definition at line 225 of file regex.h.

Referenced by std::regex_traits< _CharType >::transform_primary().

4.882.3.8 template<typename _Ch_type> template<typename _Fwd_iter > string_type std::regex_traits< _Ch_type >::transform_primary (_Fwd_iter *__first*, _Fwd_iter *__last*) const [inline]

Gets a sort key for a character sequence, independent of case.

Parameters

__first	beginning of the character sequence.
__last	one-past-the-end of the character sequence.

Effects: if typeid(use_facet<collate<_Ch_type> >) == typeid(collate_byname<_Ch_type>) and the form of the sort key returned by collate_byname<_Ch_type>::transform(__first, __last) is known and can be converted into a primary sort key then returns that key, otherwise returns an empty string.

Todo Implement this function correctly.

Definition at line 249 of file regex.h.

4.882.3.9 template<typename _Ch_type> char_type std::regex_traits< _Ch_type >::translate (char_type *__c*) const [inline]

Performs the identity translation.

Parameters

__c	A character to the locale-specific character set.

Returns

__c.

Definition at line 183 of file regex.h.

4.882.3.10 template<typename _Ch_type> char_type std::regex_traits< _Ch_type >::translate_nocase (char_type *__c*) const [inline]

Translates a character into a case-insensitive equivalent.

Parameters

__c	A character to the locale-specific character set.

Returns

the locale-specific lower-case equivalent of __c.

Exceptions

std::bad_cast	if the imbued locale does not support the ctype facet.

Definition at line 196 of file regex.h.

4.882.3.11 template<typename _Ch_type> int std::regex_traits< _Ch_type >::value (_Ch_type *__ch*, int *__radix*) const

Converts a digit to an int.

Parameters

__ch	a character representing a digit.
__radix	the radix if the numeric conversion (limited to 8, 10, or 16).

Returns

the value represented by the digit __ch in base radix if the character __ch is a valid digit in base radix; otherwise returns -1.

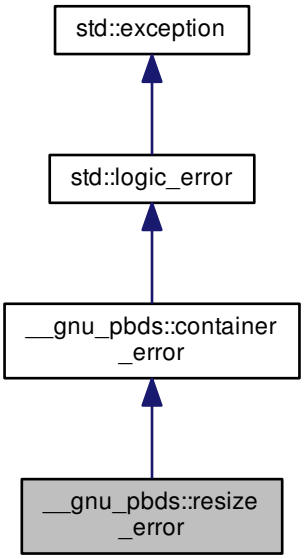
4.890 __gnu_pbds::resize_error Struct Reference

Inheritance diagram for __gnu_pbds::resize_error:



Public Member Functions

- virtual const char ∗ what () const noexcept

4.890.1 Detailed Description

A container cannot be resized.

Definition at line 73 of file exception.hpp.

4.890.2 Member Function Documentation

4.890.2.1 virtual const char∗ std::logic_error::what ( ) const [virtual], [noexcept], [inherited]

Returns a C-style character string describing the general cause of the current error (the same string passed to the ctor).

Reimplemented from std::exception.

Reimplemented in std::future_error.

The documentation for this struct was generated from the following file:

- exception.hpp

4.891 __gnu_pbds::detail::resize_policy< _Tp > Class Template Reference

4.893.1 Detailed Description

template<typename _Iterator>class std::reverse_iterator< _Iterator >

Bidirectional and random access iterators have corresponding reverse iterator adaptors that iterate through the data structure in the opposite direction. They have the same signatures as the corresponding iterators. The fundamental relation between a reverse iterator and its corresponding iterator `i` is established by the identity:

```
&*(reverse_iterator(i)) == &*(i - 1)
```

This mapping is dictated by the fact that while there is always a pointer past the end of an array, there might not be a valid pointer before the beginning of an array. [24.4.1]/1,2

Reverse iterators can be tricky and surprising at first. Their semantics make sense, however, and the trickiness is a side effect of the requirement that the iterators must be safe.

Definition at line 125 of file bits/stl_iterator.h.

4.893.2 Member Typedef Documentation

4.893.2.1 typedef iterator_traits< _Iterator >::iterator_category std::iterator< iterator_traits< _Iterator >::iterator_category , iterator_traits< _Iterator >::value_type , iterator_traits< _Iterator >::difference_type , iterator_traits< _Iterator >::pointer , iterator_traits< _Iterator >::reference >::iterator_category [inherited]

One of the tag types.

Definition at line 130 of file stl_iterator_base_types.h.

4.893.2.2 typedef iterator_traits< _Iterator >::value_type std::iterator< iterator_traits< _Iterator >::iterator_category , iterator_traits< _Iterator >::value_type , iterator_traits< _Iterator >::difference_type , iterator_traits< _Iterator >::pointer , iterator_traits< _Iterator >::reference >::value_type [inherited]

The type "pointed to" by the iterator.

Definition at line 132 of file stl_iterator_base_types.h.

4.893.3 Constructor & Destructor Documentation

4.893.3.1 template<typename _Iterator> constexpr std::reverse_iterator< _Iterator >::reverse_iterator ( ) [inline]

The default constructor value-initializes member `current`. If it is a pointer, that means it is zero-initialized.

Definition at line 161 of file bits/stl_iterator.h.

Referenced by std::reverse_iterator< _Iterator >::operator+(), and std::reverse_iterator< _Iterator >::operator-().

4.893.3.2 template<typename _Iterator> constexpr std::reverse_iterator< _Iterator >::reverse_iterator (iterator_type __x) [inline],[explicit]

This iterator will move in the opposite direction that x does.

Definition at line 167 of file bits/stl_iterator.h.

4.893.3.3 template<typename _Iterator> constexpr std::reverse_iterator< _Iterator >::reverse_iterator (const reverse_iterator< _Iterator > & __x) [inline]

The copy constructor is normal.

Definition at line 173 of file bits/stl_iterator.h.

4.893.3.4 template<typename _Iterator> template<typename _Iter > constexpr std::reverse_iterator< _Iterator >::reverse_iterator (const reverse_iterator< _Iter > & __x) [inline]

A reverse_iterator across other types can be copied if the underlying iterator can be converted to the type of current.

Definition at line 186 of file bits/stl_iterator.h.

4.893.4 Member Function Documentation

4.893.4.1 template<typename _Iterator> constexpr iterator_type std::reverse_iterator< _Iterator >::base ( ) const [inline]

Returns

current, the iterator used for underlying work.

Definition at line 193 of file bits/stl_iterator.h.

Referenced by std::operator==().

4.893.4.2 template<typename _Iterator> constexpr reference std::reverse_iterator< _Iterator >::operator* ( ) const [inline]

Returns

A reference to the value at -current

This requires that -current is dereferenceable.

Warning

This implementation requires that for an iterator of the underlying iterator type, x, a reference obtained by *x remains valid after x has been modified or destroyed. This is a bug: http://gcc.gnu.org/PR51823

Definition at line 207 of file bits/stl_iterator.h.

4.893.4.3 template<typename _Iterator> constexpr reverse_iterator std::reverse_iterator< _Iterator >::operator+ (difference_type __n) const [inline]

Returns

A reverse_iterator that refers to `current - __n`

The underlying iterator must be a Random Access Iterator.

Definition at line 288 of file bits/stl_iterator.h.

References std::reverse_iterator< _Iterator >::reverse_iterator().

4.893.4.4 template<typename _Iterator> constexpr reverse_iterator& std::reverse_iterator< _Iterator >::operator++ ( ) [inline]

Returns

`*this`

Decrements the underlying iterator.

Definition at line 238 of file bits/stl_iterator.h.

4.893.4.5 template<typename _Iterator> constexpr reverse_iterator std::reverse_iterator< _Iterator >::operator++ (int) [inline]

Returns

The original value of `*this`

Decrements the underlying iterator.

Definition at line 250 of file bits/stl_iterator.h.

4.893.4.6 template<typename _Iterator> constexpr reverse_iterator& std::reverse_iterator< _Iterator >::operator+= (difference_type __n) [inline]

Returns

*this

Moves the underlying iterator backwards *__n* steps. The underlying iterator must be a Random Access Iterator.

Definition at line 298 of file bits/stl_iterator.h.

4.893.4.7 template<typename _Iterator> constexpr reverse_iterator std::reverse_iterator< _Iterator >::operator- (difference_type __n) const [inline]

Returns

A reverse_iterator that refers to `current - __n`

The underlying iterator must be a Random Access Iterator.

Definition at line 310 of file bits/stl_iterator.h.

References std::reverse_iterator< _Iterator >::reverse_iterator().

4.893.4.8 template<typename _Iterator> constexpr reverse_iterator& std::reverse_iterator< _Iterator >::operator-- ( ) [inline]

Returns

`*this`

Increments the underlying iterator.

Definition at line 263 of file bits/stl_iterator.h.

4.893.4.9 template<typename _Iterator> constexpr reverse_iterator std::reverse_iterator< _Iterator >::operator-- (int) [inline]

Returns

A reverse_iterator with the previous value of `*this`

Increments the underlying iterator.

Definition at line 275 of file bits/stl_iterator.h.

4.893.4.10 template<typename _Iterator> constexpr reverse_iterator& std::reverse_iterator< _Iterator >::operator-= (difference_type __n) [inline]

Returns

*this

Moves the underlying iterator forwards *__n* steps. The underlying iterator must be a Random Access Iterator.

Definition at line 320 of file bits/stl_iterator.h.

4.893.4.11 template<typename _Iterator> constexpr pointer std::reverse_iterator< _Iterator >::operator-> ( ) const [inline]

Returns

A pointer to the value at `-current`

This requires that `-current` is dereferenceable.

Definition at line 219 of file bits/stl_iterator.h.

4.893.4.12 template<typename _Iterator> constexpr reference std::reverse_iterator< _Iterator >::operator[] (difference_type __n) const [inline]

Returns

The value at `current` - *__n* - 1

The underlying iterator must be a Random Access Iterator.

Definition at line 332 of file bits/stl_iterator.h.

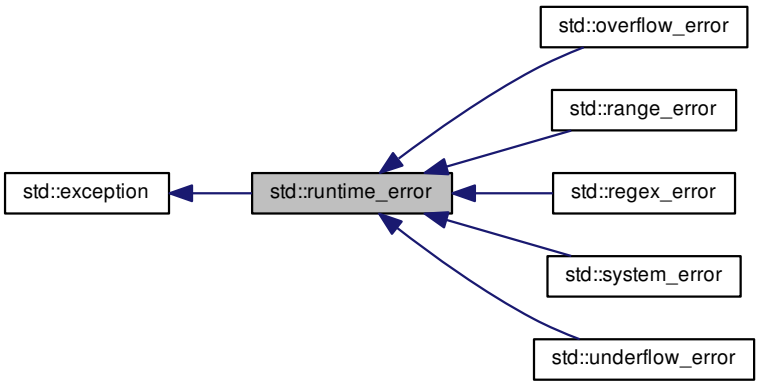
4.895 std::runtime_error Class Reference

Inheritance diagram for std::runtime_error:



Public Member Functions

- runtime_error (const string &__arg) _GLIBCXX_TXN_SAFE
- **runtime_error** (const char *) _GLIBCXX_TXN_SAFE

- **runtime_error** (runtime_error &&) noexcept
- **runtime_error** (const runtime_error &)=default
- runtime_error & **operator=** (runtime_error &&) noexcept
- runtime_error & **operator=** (const runtime_error &)=default
- virtual const char * what () const noexcept

4.895.1 Detailed Description

One of two subclasses of exception.

Runtime errors represent problems outside the scope of a program; they cannot be easily predicted and can generally only be caught as the program executes.

Definition at line 219 of file stdexcept.

4.895.2 Constructor & Destructor Documentation

4.895.2.1 std::runtime_error::runtime_error (const string & *__arg*) [explicit]

Takes a character string describing the error.

4.895.3 Member Function Documentation

4.895.3.1 virtual const char* std::runtime_error::what ( ) const [virtual], [noexcept]

Returns a C-style character string describing the general cause of the current error (the same string passed to the ctor).

Reimplemented from std::exception.

The documentation for this class was generated from the following file:

- stdexcept

4.896 __gnu_pbds::sample_probe_fn Class Reference

Public Types

- typedef std::size_t **size_type**

Public Member Functions

- sample_probe_fn ()
- sample_probe_fn (const sample_probe_fn &)
- void swap (sample_probe_fn &)

Protected Member Functions

- size_type operator() (key_const_reference r_key, size_type i) const

4.896.1 Detailed Description

A sample probe policy.

Definition at line 47 of file sample_probe_fn.hpp.

4.896.2 Constructor & Destructor Documentation

4.896.2.1 __gnu_pbds::sample_probe_fn::sample_probe_fn ( )

Default constructor.

4.896.2.2 __gnu_pbds::sample_probe_fn::sample_probe_fn (const sample_probe_fn &)

Copy constructor.

4.896.3 Member Function Documentation

4.896.3.1 size_type __gnu_pbds::sample_probe_fn::operator() (key_const_reference *r_key*, size_type *i*) const [inline], [protected]

Returns the i-th offset from the hash value of some key r_key.

4.896.3.2 void __gnu_pbds::sample_probe_fn::swap (sample_probe_fn &) [inline]

Swaps content.

The documentation for this class was generated from the following file:

- sample_probe_fn.hpp

4.897 __gnu_pbds::sample_range_hashing Class Reference

Public Types

- typedef std::size_t size_type

Public Member Functions

- sample_range_hashing ()
- sample_range_hashing (const sample_range_hashing &other)
- void swap (sample_range_hashing &other)

Protected Member Functions

- void notify_resized (size_type)
- size_type operator() (size_type) const

4.897.1 Detailed Description

A sample range-hashing functor.

Definition at line 47 of file sample_range_hashing.hpp.

4.897.2 Member Typedef Documentation

4.897.2.1 typedef std::size_t __gnu_pbds::sample_range_hashing::size_type

Size type.

Definition at line 51 of file sample_range_hashing.hpp.

4.897.3 Constructor & Destructor Documentation

4.897.3.1 __gnu_pbds::sample_range_hashing::sample_range_hashing ( )

Default constructor.

4.897.3.2 __gnu_pbds::sample_range_hashing::sample_range_hashing (const sample_range_hashing & *other*)

Copy constructor.

4.897.4 Member Function Documentation

4.897.4.1 void __gnu_pbds::sample_range_hashing::notify_resized (size_type) [protected]

Notifies the policy object that the container's size has changed to argument's size.

4.897.4.2 size_type __gnu_pbds::sample_range_hashing::operator() (size_type) const [inline], [protected]

Transforms the __hash value hash into a ranged-hash value.

4.897.4.3 void __gnu_pbds::sample_range_hashing::swap (sample_range_hashing & *other*) [inline]

Swaps content.

The documentation for this class was generated from the following file:

- sample_range_hashing.hpp

4.898 __gnu_pbds::sample_ranged_hash_fn Class Reference

Public Types

- typedef std::size_t **size_type**

Public Member Functions

- sample_ranged_hash_fn ()
- sample_ranged_hash_fn (const sample_ranged_hash_fn &)
- void swap (sample_ranged_hash_fn &)

Protected Member Functions

- void notify_resized (size_type)
- size_type operator() (key_const_reference) const

4.898.1 Detailed Description

A sample ranged-hash functor.

Definition at line 47 of file sample_ranged_hash_fn.hpp.

4.898.2 Constructor & Destructor Documentation

4.898.2.1 __gnu_pbds::sample_ranged_hash_fn::sample_ranged_hash_fn ( )

Default constructor.

4.898.2.2 __gnu_pbds::sample_ranged_hash_fn::sample_ranged_hash_fn (const sample_ranged_hash_fn &)

Copy constructor.

4.898.3 Member Function Documentation

4.898.3.1 void __gnu_pbds::sample_ranged_hash_fn::notify_resized (size_type) [protected]

Notifies the policy object that the container's __size has changed to size.

4.898.3.2 size_type __gnu_pbds::sample_ranged_hash_fn::operator() (key_const_reference) const [inline], [protected]

Transforms key_const_reference into a position within the table.

4.898.3.3 void __gnu_pbds::sample_ranged_hash_fn::swap (sample_ranged_hash_fn &) [inline]

Swaps content.

The documentation for this class was generated from the following file:

- sample_ranged_hash_fn.hpp

4.899 __gnu_pbds::sample_ranged_probe_fn Class Reference

Public Types

- typedef std::size_t **size_type**

Public Member Functions

- **sample_ranged_probe_fn** (const sample_ranged_probe_fn &)
- void **swap** (sample_ranged_probe_fn &)

Protected Member Functions

- void **notify_resized** (size_type)
- size_type **operator()** (key_const_reference, std::size_t, size_type) const

4.899.1 Detailed Description

A sample ranged-probe functor.

Definition at line 47 of file sample_ranged_probe_fn.hpp.

The documentation for this class was generated from the following file:

- sample_ranged_probe_fn.hpp

4.900 __gnu_pbds::sample_resize_policy Class Reference

Public Types

- typedef std::size_t size_type

Public Member Functions

- sample_resize_policy ()
- sample_range_hashing (const sample_resize_policy &other)
- void swap (sample_resize_policy &other)

Protected Member Functions

- size_type get_new_size (size_type size, size_type num_used_e) const
- bool is_resize_needed () const
- void notify_cleared ()
- void notify_erase_search_collision ()
- void notify_erase_search_end ()
- void notify_erase_search_start ()
- void notify_erased (size_type num_e)
- void notify_find_search_collision ()
- void notify_find_search_end ()
- void notify_find_search_start ()
- void notify_insert_search_collision ()
- void notify_insert_search_end ()
- void notify_insert_search_start ()
- void notify_inserted (size_type num_e)
- void notify_resized (size_type new_size)

4.900.1 Detailed Description

A sample resize policy.

Definition at line 47 of file sample_resize_policy.hpp.

4.900.2 Member Typedef Documentation

4.900.2.1 typedef std::size_t __gnu_pbds::sample_resize_policy::size_type

Size type.

Definition at line 51 of file sample_resize_policy.hpp.

4.900.3 Constructor & Destructor Documentation

4.900.3.1 __gnu_pbds::sample_resize_policy::sample_resize_policy ( )

Default constructor.

4.900.4 Member Function Documentation

4.900.4.1 size_type __gnu_pbds::sample_resize_policy::get_new_size (size_type *size,* size_type *num_used_e*) const [protected]

Queries what the new size should be.

4.900.4.2 bool __gnu_pbds::sample_resize_policy::is_resize_needed ( ) const [inline], [protected]

Queries whether a resize is needed.

4.900.4.3 void __gnu_pbds::sample_resize_policy::notify_cleared ( ) [protected]

Notifies the table was cleared.

4.900.4.4 void __gnu_pbds::sample_resize_policy::notify_erase_search_collision ( ) [inline], [protected]

Notifies a search encountered a collision.

4.900.4.5 void __gnu_pbds::sample_resize_policy::notify_erase_search_end ( ) [inline], [protected]

Notifies a search ended.

4.900.4.6 void __gnu_pbds::sample_resize_policy::notify_erase_search_start ( ) [inline], [protected]

Notifies a search started.

4.900.4.7 void __gnu_pbds::sample_resize_policy::notify_erased (size_type *num_e*) [inline], [protected]

Notifies an element was erased.

4.900.4.8 void __gnu_pbds::sample_resize_policy::notify_find_search_collision ( ) [inline], [protected]

Notifies a search encountered a collision.

4.900.4.9 void __gnu_pbds::sample_resize_policy::notify_find_search_end ( ) [inline], [protected]

Notifies a search ended.

4.900.4.10 void __gnu_pbds::sample_resize_policy::notify_find_search_start ( ) [inline], [protected]

Notifies a search started.

4.900.4.11 void __gnu_pbds::sample_resize_policy::notify_insert_search_collision ( ) [inline], [protected]

Notifies a search encountered a collision.

4.900.4.12 void __gnu_pbds::sample_resize_policy::notify_insert_search_end ( ) [inline], [protected]

Notifies a search ended.

4.900.4.13 void __gnu_pbds::sample_resize_policy::notify_insert_search_start ( ) [inline], [protected]

Notifies a search started.

4.900.4.14 void __gnu_pbds::sample_resize_policy::notify_inserted (size_type *num_e*) [inline], [protected]

Notifies an element was inserted.

4.900.4.15 void __gnu_pbds::sample_resize_policy::notify_resized (size_type *new_size*) [protected]

Notifies the table was resized to new_size.

4.900.4.16 __gnu_pbds::sample_resize_policy::sample_range_hashing (const sample_resize_policy & *other*)

Copy constructor.

4.900.4.17 void __gnu_pbds::sample_resize_policy::swap (sample_resize_policy & *other*) [inline]

Swaps content.

The documentation for this class was generated from the following file:

- sample_resize_policy.hpp

4.901 __gnu_pbds::sample_resize_trigger Class Reference

Public Types

- typedef std::size_t size_type

Public Member Functions

- sample_resize_trigger ()
- sample_range_hashing (const sample_resize_trigger &)
- void swap (sample_resize_trigger &)

Protected Member Functions

- bool is_grow_needed (size_type size, size_type num_entries) const
- bool is_resize_needed () const
- void notify_cleared ()
- void notify_erase_search_collision ()
- void notify_erase_search_end ()
- void notify_erase_search_start ()
- void notify_erased (size_type num_entries)
- void notify_externally_resized (size_type new_size)
- void notify_find_search_collision ()
- void notify_find_search_end ()
- void notify_find_search_start ()
- void notify_insert_search_collision ()
- void notify_insert_search_end ()
- void notify_insert_search_start ()
- void notify_inserted (size_type num_entries)
- void notify_resized (size_type new_size)

4.901.1 Detailed Description

A sample resize trigger policy.

Definition at line 47 of file sample_resize_trigger.hpp.

4.901.2 Member Typedef Documentation

4.901.2.1 typedef std::size_t __gnu_pbds::sample_resize_trigger::size_type

Size type.

Definition at line 51 of file sample_resize_trigger.hpp.

4.901.3 Constructor & Destructor Documentation

4.901.3.1 __gnu_pbds::sample_resize_trigger::sample_resize_trigger ( )

Default constructor.

4.901.4 Member Function Documentation

4.901.4.1 bool __gnu_pbds::sample_resize_trigger::is_grow_needed (size_type *size,* size_type *num_entries*) const [inline], [protected]

Queries whether a grow is needed.

4.901.4.2 bool __gnu_pbds::sample_resize_trigger::is_resize_needed ( ) const [inline], [protected]

Queries whether a resize is needed.

4.901.4.3 void __gnu_pbds::sample_resize_trigger::notify_cleared ( ) [protected]

Notifies the table was cleared.

4.901.4.4 void __gnu_pbds::sample_resize_trigger::notify_erase_search_collision ( ) [inline], [protected]

Notifies a search encountered a collision.

4.901.4.5 void __gnu_pbds::sample_resize_trigger::notify_erase_search_end ( ) [inline], [protected]

Notifies a search ended.

4.901.4.6 void __gnu_pbds::sample_resize_trigger::notify_erase_search_start ( ) [inline], [protected]

Notifies a search started.

4.901.4.7 void __gnu_pbds::sample_resize_trigger::notify_erased (size_type *num_entries*) [inline], [protected]

Notifies an element was erased.

4.901.4.8 void __gnu_pbds::sample_resize_trigger::notify_externally_resized (size_type *new_size*) [protected]

Notifies the table was resized externally.

4.901.4.9 void __gnu_pbds::sample_resize_trigger::notify_find_search_collision ( ) [inline], [protected]

Notifies a search encountered a collision.

4.901.4.10 void __gnu_pbds::sample_resize_trigger::notify_find_search_end ( ) [inline], [protected]

Notifies a search ended.

4.901.4.11 void __gnu_pbds::sample_resize_trigger::notify_find_search_start ( ) [inline], [protected]

Notifies a search started.

4.901.4.12 void __gnu_pbds::sample_resize_trigger::notify_insert_search_collision ( ) [inline], [protected]

Notifies a search encountered a collision.

4.901.4.13 void __gnu_pbds::sample_resize_trigger::notify_insert_search_end ( ) [inline], [protected]

Notifies a search ended.

4.901.4.14 void __gnu_pbds::sample_resize_trigger::notify_insert_search_start ( ) [inline], [protected]

Notifies a search started.

4.901.4.15 void __gnu_pbds::sample_resize_trigger::notify_inserted (size_type *num_entries*) [inline], [protected]

Notifies an element was inserted. the total number of entries in the table is num_entries.

4.901.4.16 void __gnu_pbds::sample_resize_trigger::notify_resized (size_type *new_size*) [protected]

Notifies the table was resized as a result of this object's signifying that a resize is needed.

4.901.4.17 __gnu_pbds::sample_resize_trigger::sample_range_hashing (const sample_resize_trigger &)

Copy constructor.

4.901.4.18 void __gnu_pbds::sample_resize_trigger::swap (sample_resize_trigger &) [inline]

Swaps content.

The documentation for this class was generated from the following file:

- sample_resize_trigger.hpp

4.902 __gnu_pbds::sample_size_policy Class Reference

Public Types

- typedef std::size_t size_type

Public Member Functions

- sample_size_policy ()
- sample_range_hashing (const sample_size_policy &)
- void swap (sample_size_policy &other)

Protected Member Functions

- size_type get_nearest_larger_size (size_type size) const
- size_type get_nearest_smaller_size (size_type size) const

4.902.1 Detailed Description

A sample size policy.

Definition at line 47 of file sample_size_policy.hpp.

4.902.2 Member Typedef Documentation

4.902.2.1 typedef std::size_t __gnu_pbds::sample_size_policy::size_type

Size type.

Definition at line 51 of file sample_size_policy.hpp.

4.902.3 Constructor & Destructor Documentation

4.902.3.1 __gnu_pbds::sample_size_policy::sample_size_policy ( )

Default constructor.

4.902.4 Member Function Documentation

4.902.4.1 size_type __gnu_pbds::sample_size_policy::get_nearest_larger_size (size_type *size*) const [inline], [protected]

Given a __size size, returns a __size that is larger.

4.902.4.2 size_type __gnu_pbds::sample_size_policy::get_nearest_smaller_size (size_type *size*) const [inline], [protected]

Given a __size size, returns a __size that is smaller.

4.902.4.3 __gnu_pbds::sample_size_policy::sample_range_hashing (const sample_size_policy &)

Copy constructor.

4.902.4.4 void __gnu_pbds::sample_size_policy::swap (sample_size_policy & *other*) [inline]

Swaps content.

The documentation for this class was generated from the following file:

- sample_size_policy.hpp

4.903 __gnu_pbds::sample_tree_node_update< Const_Node_Iter, Node_Iter, Cmp_Fn, _Alloc > Class Template Reference

4.903.1 Detailed Description

template<typename Const_Node_Iter, typename Node_Iter, typename Cmp_Fn, typename _Alloc>class __gnu_pbds::sample_tree_node_update< Const_Node_Iter, Node_Iter, Cmp_Fn, _Alloc >

A sample node updator.

Definition at line 49 of file sample_tree_node_update.hpp.

The documentation for this class was generated from the following file:

- sample_tree_node_update.hpp

4.904 __gnu_pbds::sample_trie_access_traits Struct Reference

Public Types

- enum { **max_size** }
- typedef std::string::const_iterator **const_iterator**
- typedef char e_type
- typedef rebind_traits< _Alloc, key_type >::const_reference **key_const_reference**
- typedef std::string **key_type**
- typedef std::size_t **size_type**

Static Public Member Functions

- static const_iterator begin (key_const_reference)
- static size_type e_pos (e_type)
- static const_iterator end (key_const_reference)

4.904.1 Detailed Description

A sample trie element access traits.

Definition at line 47 of file sample_trie_access_traits.hpp.

4.904.2 Member Typedef Documentation

4.904.2.1 typedef char __gnu_pbds::sample_trie_access_traits::e_type

Element type.

Definition at line 57 of file sample_trie_access_traits.hpp.

4.904.3 Member Function Documentation

4.904.3.1 static const_iterator __gnu_pbds::sample_trie_access_traits::begin (key_const_reference) [inline], [static]

Returns a const_iterator to the first element of r_key.

4.904.3.2 static size_type __gnu_pbds::sample_trie_access_traits::e_pos (e_type) [inline], [static]

Maps an element to a position.

4.904.3.3 static const_iterator __gnu_pbds::sample_trie_access_traits::end (key_const_reference) [inline], [static]

Returns a const_iterator to the after-last element of r_key.

The documentation for this struct was generated from the following file:

- sample_trie_access_traits.hpp

4.905 __gnu_pbds::sample_trie_node_update< Node_CItr, Node_Itr, _ATraits, _Alloc > Class Template Reference

Public Types

- typedef std::size_t **metadata_type**

Protected Member Functions

- sample_trie_node_update ()
- void operator() (node_iterator, node_const_iterator) const

4.905.1 Detailed Description

template<typename Node_CItr, typename Node_Itr, typename _ATraits, typename _Alloc>class __gnu_pbds::sample_trie_node_update< Node_CItr, Node_Itr, _ATraits, _Alloc >

A sample node updator.

Definition at line 49 of file sample_trie_node_update.hpp.

4.905.2 Constructor & Destructor Documentation

4.905.2.1 template<typename Node_CItr , typename Node_Itr , typename _ATraits , typename _Alloc > __gnu_pbds::sample_trie_node_update< Node_CItr, Node_Itr, _ATraits, _Alloc >::sample_trie_node_update ( ) [protected]

Default constructor.

4.905.3 Member Function Documentation

4.905.3.1 template<typename Node_CItr , typename Node_Itr , typename _ATraits , typename _Alloc > void __gnu_pbds::sample_trie_node_update< Node_CItr, Node_Itr, _ATraits, _Alloc >::operator() (node_iterator , node_const_iterator) const [inline], [protected]

Updates the rank of a node through a node_iterator node_it; end_nd_it is the end node iterator.

The documentation for this class was generated from the following file:

- sample_trie_node_update.hpp

4.906 __gnu_pbds::sample_update_policy Struct Reference

Public Member Functions

- sample_update_policy ()
- sample_update_policy (const sample_update_policy &)
- void swap (sample_update_policy &other)

Protected Types

- typedef some_metadata_type metadata_type

Protected Member Functions

- metadata_type operator() () const
- bool operator() (metadata_reference) const

4.906.1 Detailed Description

A sample list-update policy.

Definition at line 47 of file sample_update_policy.hpp.

4.906.2 Member Typedef Documentation

4.906.2.1 typedef some_metadata_type __gnu_pbds::sample_update_policy::metadata_type [protected]

Metadata on which this functor operates.

Definition at line 61 of file sample_update_policy.hpp.

4.906.3 Constructor & Destructor Documentation

4.906.3.1 __gnu_pbds::sample_update_policy::sample_update_policy ( )

Default constructor.

4.906.3.2 __gnu_pbds::sample_update_policy::sample_update_policy (const sample_update_policy &)

Copy constructor.

4.906.4 Member Function Documentation

4.906.4.1 metadata_type __gnu_pbds::sample_update_policy::operator() ( ) const [protected]

Creates a metadata object.

4.906.4.2 bool __gnu_pbds::sample_update_policy::operator() (metadata_reference) const [protected]

Decides whether a metadata object should be moved to the front of the list. A list-update based containers object will call this method to decide whether to move a node to the front of the list. The method shoule return true if the node should be moved to the front of the list.

4.906.4.3 void __gnu_pbds::sample_update_policy::swap (sample_update_policy & *other*) [inline]

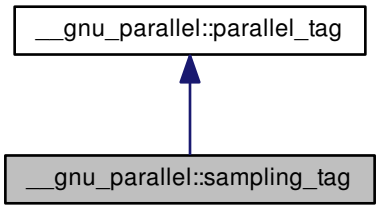
Swaps content.

The documentation for this struct was generated from the following file:

- sample_update_policy.hpp

4.907 __gnu_parallel::sampling_tag Struct Reference

Inheritance diagram for __gnu_parallel::sampling_tag:



Public Member Functions

- **sampling_tag** (_ThreadIndex __num_threads)
- _ThreadIndex __get_num_threads ()
- void set_num_threads (_ThreadIndex __num_threads)

4.907.1 Detailed Description

Forces parallel merging with exact splitting, at compile time.

Definition at line 118 of file tags.h.

4.907.2 Member Function Documentation

4.907.2.1 _ThreadIndex __gnu_parallel::parallel_tag::__get_num_threads ( ) [inline], [inherited]

Find out desired number of threads.

Returns

Desired number of threads.

Definition at line 63 of file tags.h.

Referenced by __gnu_parallel::__parallel_sort().

4.907.2.2 void __gnu_parallel::parallel_tag::set_num_threads (_ThreadIndex *__num_threads*) [inline], [inherited]

Set the desired number of threads.

Parameters

__num_threads	Desired number of threads.

Definition at line 73 of file tags.h.

The documentation for this struct was generated from the following file:

- tags.h

4.908 std::scoped_allocator_adaptor< _OuterAlloc, _InnerAllocs > Class Template Reference

Inherits _OuterAlloc.

Public Types

4.912 __gnu_pbds::detail::select_value_type< Key, Mapped > Struct Template Reference

Public Types

- typedef std::pair< const Key,
  Mapped > **type**

4.912.1 Detailed Description

template<typename Key, typename Mapped>struct __gnu_pbds::detail::select_value_type< Key, Mapped >

Choose value_type to be a key/value pair or just a key.

Definition at line 107 of file types_traits.hpp.

The documentation for this struct was generated from the following file:

- types_traits.hpp

4.913 __gnu_pbds::detail::select_value_type< Key, null_type > Struct Template Reference

Public Types

- typedef Key **type**

4.913.1 Detailed Description

template<typename Key>struct __gnu_pbds::detail::select_value_type< Key, null_type >

Specialization for sets where the key is the value_type.

Definition at line 114 of file types_traits.hpp.

The documentation for this struct was generated from the following file:

- types_traits.hpp

4.914 std::basic_istream< _CharT, _Traits >::sentry Class Reference

Public Types

- typedef __istream_type::__ctype_type **__ctype_type**
- typedef _Traits::int_type **__int_type**
- typedef basic_istream< _CharT, _Traits > **__istream_type**
- typedef basic_streambuf < _CharT, _Traits > **__streambuf_type**
- typedef _Traits traits_type

Public Member Functions

- sentry (basic_istream< _CharT, _Traits > &__is, bool __noskipws=false)
- operator bool () const

4.914.1 Detailed Description

template<typename _CharT, typename _Traits = char_traits<_CharT>>class std::basic_istream< _CharT, _Traits >::sentry

Performs setup work for input streams.

Objects of this class are created before all of the standard extractors are run. It is responsible for *exception-safe prefix and suffix operations,* although only prefix actions are currently required by the standard.

Definition at line 686 of file istream.

4.914.2 Member Typedef Documentation

4.914.2.1 template<typename _CharT, typename _Traits = char_traits<_CharT>> typedef _Traits std::basic_istream< _CharT, _Traits >::sentry::traits_type

Easy access to dependent types.

Definition at line 693 of file istream.

4.914.3 Constructor & Destructor Documentation

4.914.3.1 template<typename _CharT, typename _Traits = char_traits<_CharT>> std::basic_istream< _CharT, _Traits >::sentry::sentry (basic_istream< _CharT, _Traits > & *__is,* bool *__noskipws* = `false`) `[explicit]`

The constructor performs all the work.

Parameters

__is	The input stream to guard.
__noskipws	Whether to consume whitespace or not.

If the stream state is good (*__is.good()* is true), then the following actions are performed, otherwise the sentry state is false (*not okay*) and failbit is set in the stream state.

The sentry's preparatory actions are:

1. if the stream is tied to an output stream, `is.tie()->flush()` is called to synchronize the output sequence
2. if *__noskipws* is false, and `ios_base::skipws` is set in `is.flags()`, the sentry extracts and discards whitespace characters from the stream. The currently imbued locale is used to determine whether each character is whitespace.

If the stream state is still good, then the sentry state becomes true (*okay*).

Definition at line 47 of file istream.tcc.

References std::ios_base::badbit, std::ios_base::eofbit, std::ios_base::failbit, std::ios_base::flags(), std::basic_ios< _CharT, _Traits >::good(), std::ios_base::goodbit, std::__ctype_abstract_base< _CharT >::is(), std::basic_ios< _CharT, _Traits >::rdbuf(), std::basic_ios< _CharT, _Traits >::setstate(), std::basic_streambuf< _CharT, _Traits >::sgetc(), std::ios_base::skipws, std::basic_streambuf< _CharT, _Traits >::snextc(), and std::basic_ios< _CharT, _Traits >::tie().

4.914.4 Member Function Documentation

4.914.4.1 template<typename _CharT, typename _Traits = char_traits<_CharT>> std::basic_istream< _CharT, _Traits >::sentry::operator bool ( ) const `[inline]`, `[explicit]`

Quick status checking.

Returns

The sentry state.

For ease of use, sentries may be converted to booleans. The return value is that of the sentry state (true == okay).

Definition at line 734 of file istream.

The documentation for this class was generated from the following files:

- istream
- istream.tcc

4.915 std::basic_ostream< _CharT, _Traits >::sentry Class Reference

Public Member Functions

- sentry (basic_ostream< _CharT, _Traits > &__os)
- ~sentry ()
- operator bool () const

4.915.1 Detailed Description

template<typename _CharT, typename _Traits = char_traits<_CharT>>class std::basic_ostream< _CharT, _Traits >::sentry

Performs setup work for output streams.

Objects of this class are created before all of the standard inserters are run. It is responsible for *exception-safe prefix and suffix operations*.

Definition at line 432 of file ostream.

4.915.2 Constructor & Destructor Documentation

4.915.2.1 template<typename _CharT, typename _Traits = char_traits<_CharT>> std::basic_ostream< _CharT, _Traits >::sentry::sentry (basic_ostream< _CharT, _Traits > & *__os*) [explicit]

The constructor performs preparatory work.

Parameters

__os	The output stream to guard.

If the stream state is good (*__os.good()* is true), then if the stream is tied to another output stream, `is.tie()->flush()` is called to synchronize the output sequences.

If the stream state is still good, then the sentry state becomes true (*okay*).

Definition at line 47 of file ostream.tcc.

References std::ios_base::failbit, std::basic_ios< _CharT, _Traits >::good(), std::basic_ios< _CharT, _Traits >::setstate(), and std::basic_ios< _CharT, _Traits >::tie().

4.915.2.2 template<typename _CharT, typename _Traits = char_traits<_CharT>> std::basic_ostream< _CharT, _Traits >::sentry::~sentry ( ) [inline]

Possibly flushes the stream.

If `ios_base::unitbuf` is set in `os.flags()`, and `std::uncaught_exception()` is true, the sentry destructor calls `flush()` on the output stream.

Definition at line 462 of file ostream.

References std::ios_base::badbit, std::uncaught_exception(), and std::ios_base::unitbuf.

4.915.3 Member Function Documentation

4.915.3.1 template<typename _CharT, typename _Traits = char_traits<_CharT>> std::basic_ostream< _CharT, _Traits >::sentry::operator bool ( ) const [inline], [explicit]

Quick status checking.

Returns

The sentry state.

For ease of use, sentries may be converted to booleans. The return value is that of the sentry state (true == okay).

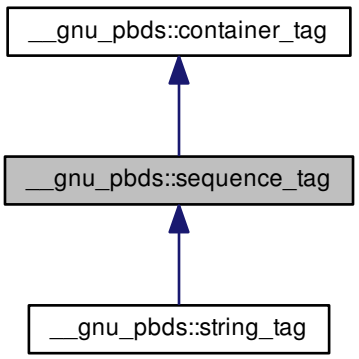
Definition at line 484 of file ostream.

The documentation for this class was generated from the following files:

- ostream
- ostream.tcc

4.916 __gnu_pbds::sequence_tag Struct Reference

Inheritance diagram for __gnu_pbds::sequence_tag:



4.916.1 Detailed Description

Basic sequence.

Definition at line 129 of file tag_and_trait.hpp.

The documentation for this struct was generated from the following file:

- tag_and_trait.hpp

4.917 __gnu_parallel::sequential_tag Struct Reference

4.917.1 Detailed Description

Forces sequential execution at compile time.

Definition at line 42 of file tags.h.

The documentation for this struct was generated from the following file:

- tags.h

4.918.1 Detailed Description

template<typename _Key, typename _Compare = std::less<_Key>, typename _Allocator = std::allocator<_Key>>class std::__debug::set< _Key, _Compare, _Allocator >

Class std::set with safety/checking/debug instrumentation.

Definition at line 44 of file set.h.

4.918.2 Member Function Documentation

4.918.2.1 void __gnu_debug::_Safe_sequence_base::_M_detach_all ( ) [protected], [inherited]

Detach all iterators, leaving them singular.

Referenced by __gnu_debug::_Safe_sequence_base::~_Safe_sequence_base().

4.918.2.2 void __gnu_debug::_Safe_sequence_base::_M_detach_singular ( ) [protected], [inherited]

Detach all singular iterators.

Postcondition

for all iterators i attached to this sequence, i->_M_version == _M_version.

4.918.2.3 __gnu_cxx::__mutex& __gnu_debug::_Safe_sequence_base::_M_get_mutex ( ) throw) [protected], [inherited]

For use in _Safe_sequence.

Referenced by __gnu_debug::_Safe_sequence< _Sequence >::_M_transfer_from_if().

4.918.2.4 void __gnu_debug::_Safe_sequence_base::_M_invalidate_all ( ) const [inline], [protected], [inherited]

Invalidates all iterators.

Definition at line 256 of file safe_base.h.

References __gnu_debug::_Safe_sequence_base::_M_version.

4.918.2.5 void __gnu_debug::_Safe_sequence< set< _Key, _Compare, _Allocator > >::_M_invalidate_if (_Predicate __pred) [inherited]

Invalidates all iterators `x` that reference this sequence, are not singular, and for which `__pred(x)` returns `true`. `__pred` will be invoked with the normal iterators nested in the safe ones.

4.918.2.6 void __gnu_debug::_Safe_sequence_base::_M_revalidate_singular ( ) [protected], [inherited]

Revalidates all attached singular iterators. This method may be used to validate iterators that were invalidated before (but for some reason, such as an exception, need to become valid again).

4.918.2.7 void __gnu_debug::_Safe_sequence_base::_M_swap (_Safe_sequence_base & __x) [protected], [noexcept], [inherited]

Swap this sequence with the given sequence. This operation also swaps ownership of the iterators, so that when the operation is complete all iterators that originally referenced one container now reference the other container.

4.918.2.8 void __gnu_debug::_Safe_sequence< set< _Key, _Compare, _Allocator > >::_M_transfer_from_if (_Safe_sequence< set< _Key, _Compare, _Allocator > > & *__from*, _Predicate *__pred*) [inherited]

Transfers all iterators `x` that reference `from` sequence, are not singular, and for which `__pred(x)` returns `true`. `__pred` will be invoked with the normal iterators nested in the safe ones.

4.918.3 Member Data Documentation

4.918.3.1 _Safe_iterator_base* __gnu_debug::_Safe_sequence_base::_M_const_iterators [inherited]

The list of constant iterators that reference this container.

Definition at line 197 of file safe_base.h.

Referenced by __gnu_debug::_Safe_sequence< _Sequence >::_M_transfer_from_if().

4.918.3.2 _Safe_iterator_base* __gnu_debug::_Safe_sequence_base::_M_iterators [inherited]

The list of mutable iterators that reference this container.

Definition at line 194 of file safe_base.h.

Referenced by __gnu_debug::_Safe_sequence< _Sequence >::_M_transfer_from_if().

4.918.3.3 unsigned int __gnu_debug::_Safe_sequence_base::_M_version [mutable], [inherited]

The container version number. This number may never be 0.

Definition at line 200 of file safe_base.h.

Referenced by __gnu_debug::_Safe_sequence_base::_M_invalidate_all().

4.919.1 Detailed Description

template<typename _Key, typename _Compare, typename _Alloc>class std::set< _Key, _Compare, _Alloc >

A standard container made up of unique keys, which can be retrieved in logarithmic time.

Template Parameters

_Key	Type of key objects.
_Compare	Comparison function object type, defaults to less<_Key>.
_Alloc	Allocator type, defaults to allocator<_Key>.

Meets the requirements of a container, a reversible container, and an associative container (using unique keys).

Sets support bidirectional iterators.

The private tree data is declared exactly the same way for set and multiset; the distinction is made entirely in how the tree functions are called (*_unique versus *_equal, same as the standard).

Definition at line 70 of file stl_multiset.h.

4.919.2 Member Typedef Documentation

4.919.3 Constructor & Destructor Documentation

4.919.3.1 template<typename _Key , typename _Compare , typename _Alloc > std::set< _Key, _Compare, _Alloc >::set ( ) [default]

Default constructor creates no elements.

4.919.3.2 template<typename _Key , typename _Compare , typename _Alloc > std::set< _Key, _Compare, _Alloc >::set (const _Compare & *__comp,* const allocator_type & *__a* = allocator_type()) [inline], [explicit]

Creates a set with no elements.

Parameters

__comp	Comparator to use.
__a	An allocator object.

Definition at line 176 of file stl_set.h.

4.919.3.3 template<typename _Key , typename _Compare , typename _Alloc > template<typename _InputIterator > std::set< _Key, _Compare, _Alloc >::set (_InputIterator *__first,* _InputIterator *__last*) [inline]

Builds a set from a range.

Parameters

__first	An input iterator.
__last	An input iterator.

Create a set consisting of copies of the elements from [__first,__last). This is linear in N if the range is already sorted, and NlogN otherwise (where N is distance(__first,__last)).

Definition at line 191 of file stl_set.h.

4.919.3.4 template<typename _Key , typename _Compare , typename _Alloc > template<typename _InputIterator > std::set< _Key, _Compare, _Alloc >::set (_InputIterator *__first,* _InputIterator *__last,* const _Compare & *__comp,* const allocator_type & *__a* = allocator_type()) [inline]

Builds a set from a range.

Parameters

__first	An input iterator.
__last	An input iterator.
__comp	A comparison functor.
__a	An allocator object.

Create a set consisting of copies of the elements from [__first,__last). This is linear in N if the range is already sorted, and NlogN otherwise (where N is distance(__first,__last)).

Definition at line 208 of file stl_set.h.

4.919.3.5 template<typename _Key , typename _Compare , typename _Alloc > std::set< _Key, _Compare, _Alloc >::set (const set< _Key, _Compare, _Alloc > &) [default]

Set copy constructor.

Whether the allocator is copied depends on the allocator traits.

4.919.3.6 template<typename _Key , typename _Compare , typename _Alloc > std::set< _Key, _Compare, _Alloc >::set (set< _Key, _Compare, _Alloc > &&) [default]

Set move constructor

The newly-created set contains the exact contents of the moved instance. The moved instance is a valid, but unspecified, set.

4.919.3.7 template<typename _Key , typename _Compare , typename _Alloc > std::set< _Key, _Compare, _Alloc >::set (initializer_list< value_type > __l, const _Compare & __comp = _Compare(), const allocator_type & __a = allocator_type()) [inline]

Builds a set from an initializer_list.

Parameters

__l	An initializer_list.
__comp	A comparison functor.
__a	An allocator object.

Create a set consisting of copies of the elements in the list. This is linear in N if the list is already sorted, and NlogN otherwise (where N is *__l.size()*).

Definition at line 243 of file stl_set.h.

4.919.3.8 template<typename _Key , typename _Compare , typename _Alloc > std::set< _Key, _Compare, _Alloc >::set (const allocator_type & __a) [inline], [explicit]

Allocator-extended default constructor.

Definition at line 251 of file stl_set.h.

4.919.3.9 template<typename _Key , typename _Compare , typename _Alloc > std::set< _Key, _Compare, _Alloc >::set (const set< _Key, _Compare, _Alloc > & __x, const allocator_type & __a) [inline]

Allocator-extended copy constructor.

Definition at line 255 of file stl_set.h.

4.919.3.10 template<typename _Key , typename _Compare , typename _Alloc > std::set< _Key, _Compare, _Alloc >::set (set< _Key, _Compare, _Alloc > && __x, const allocator_type & __a) [inline], [noexcept]

Allocator-extended move constructor.

Definition at line 259 of file stl_set.h.

4.919.3.11 template<typename _Key , typename _Compare , typename _Alloc > std::set< _Key, _Compare, _Alloc >::set (initializer_list< value_type > __l, const allocator_type & __a) [inline]

Allocator-extended initialier-list constructor.

Definition at line 265 of file stl_set.h.

4.919.3.12 template<typename _Key , typename _Compare , typename _Alloc > template<typename _InputIterator > std::set< _Key, _Compare, _Alloc >::set (_InputIterator __first, _InputIterator __last, const allocator_type & __a) [inline]

Allocator-extended range constructor.

Definition at line 271 of file stl_set.h.

4.919.3.13 template<typename _Key , typename _Compare , typename _Alloc > std::set< _Key, _Compare, _Alloc >::~set ( ) [default]

The dtor only erases the elements, and note that if the elements themselves are pointers, the pointed-to memory is not touched in any way. Managing the pointer is the user's responsibility.

4.919.4 Member Function Documentation

4.919.4.1 template<typename _Key , typename _Compare , typename _Alloc > iterator std::set< _Key, _Compare, _Alloc >::begin ( ) const [inline], [noexcept]

Returns a read-only (constant) iterator that points to the first element in the set. Iteration is done in ascending order according to the keys.

Definition at line 344 of file stl_set.h.

4.919.4.2 template<typename _Key , typename _Compare , typename _Alloc > iterator std::set< _Key, _Compare, _Alloc >::cbegin ( ) const [inline], [noexcept]

Returns a read-only (constant) iterator that points to the first element in the set. Iteration is done in ascending order according to the keys.

Definition at line 381 of file stl_set.h.

4.919.4.3 template<typename _Key , typename _Compare , typename _Alloc > iterator std::set< _Key, _Compare, _Alloc >::cend ( ) const [inline], [noexcept]

Returns a read-only (constant) iterator that points one past the last element in the set. Iteration is done in ascending order according to the keys.

Definition at line 390 of file stl_set.h.

4.919.4.4 template<typename _Key , typename _Compare , typename _Alloc > void std::set< _Key, _Compare, _Alloc >::clear ( ) [inline], [noexcept]

Erases all elements in a set. Note that this function only erases the elements, and that if the elements themselves are pointers, the pointed-to memory is not touched in any way. Managing the pointer is the user's responsibility.

Definition at line 733 of file stl_set.h.

4.919.4.5 template<typename _Key , typename _Compare , typename _Alloc > size_type std::set< _Key, _Compare, _Alloc >::count (const key_type & __x) const [inline]

Finds the number of elements.

Parameters

__x	Element to located.

Returns

Number of elements with specified key.

This function only makes sense for multisets; for set the result will either be 0 (not present) or 1 (present).

Definition at line 748 of file stl_set.h.

4.919.4.6 template<typename _Key , typename _Compare , typename _Alloc > template<typename _Kt > auto std::set< _Key, _Compare, _Alloc >::count (const _Kt & __x) const -> decltype(_M_t._M_count_tr(__x)) [inline]

Finds the number of elements.

Parameters

__x	Element to located.

Returns

Number of elements with specified key.

This function only makes sense for multisets; for set the result will either be 0 (not present) or 1 (present).

Definition at line 754 of file stl_set.h.

4.919.4.7 template<typename _Key , typename _Compare , typename _Alloc > reverse_iterator std::set< _Key, _Compare, _Alloc >::crbegin ( ) const [inline], [noexcept]

Returns a read-only (constant) iterator that points to the last element in the set. Iteration is done in descending order according to the keys.

Definition at line 399 of file stl_set.h.

4.919.4.8 template<typename _Key , typename _Compare , typename _Alloc > reverse_iterator std::set< _Key, _Compare, _Alloc >::crend ( ) const [inline], [noexcept]

Returns a read-only (constant) reverse iterator that points to the last pair in the set. Iteration is done in descending order according to the keys.

Definition at line 408 of file stl_set.h.

4.919.4.9 template<typename _Key , typename _Compare , typename _Alloc > template<typename... _Args> std::pair<iterator, bool> std::set< _Key, _Compare, _Alloc >::emplace (_Args &&... *__args*) [inline]

Attempts to build and insert an element into the set.

Parameters

__args	Arguments used to generate an element.

Returns

A pair, of which the first element is an iterator that points to the possibly inserted element, and the second is a bool that is true if the element was actually inserted.

This function attempts to build and insert an element into the set. A set relies on unique keys and thus an element is only inserted if it is not already present in the set.

Insertion requires logarithmic time.

Definition at line 462 of file stl_set.h.

4.919.4.10 template<typename _Key , typename _Compare , typename _Alloc > template<typename... _Args> iterator std::set< _Key, _Compare, _Alloc >::emplace_hint (const_iterator *__pos,* _Args &&... *__args*) [inline]

Attempts to insert an element into the set.

Parameters

__pos	An iterator that serves as a hint as to where the element should be inserted.
__args	Arguments used to generate the element to be inserted.

Returns

An iterator that points to the element with key equivalent to the one generated from *__args* (may or may not be the element itself).

This function is not concerned about whether the insertion took place, and thus does not return a boolean like the single-argument emplace() does. Note that the first parameter is only a hint and can potentially improve the performance of the insertion process. A bad hint would cause no gains in efficiency.

For more on *hinting*, see: https://gcc.gnu.org/onlinedocs/libstdc++/manual/associative.html#containers.associative.insert_hints

Insertion requires logarithmic time (if the hint is not taken).

Definition at line 488 of file stl_set.h.

4.919.4.11 template<typename _Key , typename _Compare , typename _Alloc > bool std::set< _Key, _Compare, _Alloc >::empty ( ) const [inline], [noexcept]

Returns true if the set is empty.

Definition at line 414 of file stl_set.h.

4.919.4.12 template<typename _Key , typename _Compare , typename _Alloc > iterator std::set< _Key, _Compare, _Alloc >::end ( ) const [inline], [noexcept]

Returns a read-only (constant) iterator that points one past the last element in the set. Iteration is done in ascending order according to the keys.

Definition at line 353 of file stl_set.h.

4.919.4.13 template<typename _Key , typename _Compare , typename _Alloc > std::pair<iterator, iterator> std::set< _Key, _Compare, _Alloc >::equal_range (const key_type & __x) [inline]

Finds a subsequence matching given key.

Parameters

__x	Key to be located.

Returns

Pair of iterators that possibly points to the subsequence matching given key.

This function is equivalent to

```
std::make_pair(c.lower_bound(val),
               c.upper_bound(val))
```

(but is faster than making the calls separately).

This function probably only makes sense for multisets.

Definition at line 898 of file stl_set.h.

4.919.4.14 template<typename _Key , typename _Compare , typename _Alloc > std::pair<const_iterator, const_iterator> std::set< _Key, _Compare, _Alloc >::equal_range (const key_type & __x) const [inline]

Finds a subsequence matching given key.

Parameters

__x	Key to be located.

Returns

Pair of iterators that possibly points to the subsequence matching given key.

This function is equivalent to

```
std::make_pair(c.lower_bound(val),
               c.upper_bound(val))
```

(but is faster than making the calls separately).

This function probably only makes sense for multisets.

Definition at line 902 of file stl_set.h.

4.919.4.15 template<typename _Key , typename _Compare , typename _Alloc > template<typename _Kt > auto std::set< _Key, _Compare, _Alloc >::equal_range (const _Kt & __x) -> decltype(pair<iterator, iterator>(_M_t._M_equal_range_tr(__x))) [inline]

Finds a subsequence matching given key.

Parameters

__x	Key to be located.

Returns

Pair of iterators that possibly points to the subsequence matching given key.

This function is equivalent to

```
std::make_pair(c.lower_bound(val),
               c.upper_bound(val))
```

(but is faster than making the calls separately).

This function probably only makes sense for multisets.

Definition at line 908 of file stl_set.h.

4.919.4.16 template<typename _Key , typename _Compare , typename _Alloc > template<typename _Kt > auto std::set< _Key, _Compare, _Alloc >::equal_range (const _Kt & __x) const -> decltype(pair<iterator, iterator>(_M_t._M_equal_range_tr(__x))) [inline]

Finds a subsequence matching given key.

Parameters

__x	Key to be located.

Returns

Pair of iterators that possibly points to the subsequence matching given key.

This function is equivalent to

```
std::make_pair(c.lower_bound(val),
               c.upper_bound(val))
```

(but is faster than making the calls separately).

This function probably only makes sense for multisets.

Definition at line 914 of file stl_set.h.

4.919.4.17 template<typename _Key , typename _Compare , typename _Alloc > _GLIBCXX_ABI_TAG_CXX11 iterator std::set< _Key, _Compare, _Alloc >::erase (const_iterator __position) [inline]

Erases an element from a set.

Parameters

__position	An iterator pointing to the element to be erased.

Returns

An iterator pointing to the element immediately following *__position* prior to the element being erased. If no such element exists, end() is returned.

This function erases an element, pointed to by the given iterator, from a set. Note that this function only erases the element, and that if the element is itself a pointer, the pointed-to memory is not touched in any way. Managing the pointer is the user's responsibility.

Definition at line 654 of file stl_set.h.

4.919.4.18 template<typename _Key , typename _Compare , typename _Alloc > size_type std::set< _Key, _Compare, _Alloc >::erase (const key_type & __x) [inline]

Erases elements according to the provided key.

Parameters

__x	Key of element to be erased.

Returns

The number of elements erased.

This function erases all the elements located by the given key from a set. Note that this function only erases the element, and that if the element is itself a pointer, the pointed-to memory is not touched in any way. Managing the pointer is the user's responsibility.

Definition at line 684 of file stl_set.h.

4.919.4.19 template<typename _Key , typename _Compare , typename _Alloc > _GLIBCXX_ABI_TAG_CXX11 iterator std::set< _Key, _Compare, _Alloc >::erase (const_iterator __first, const_iterator __last) [inline]

Erases a [__first,__last) range of elements from a set.

Parameters

__first	Iterator pointing to the start of the range to be erased.
__last	Iterator pointing to the end of the range to be erased.

Returns

The iterator *__last*.

This function erases a sequence of elements from a set. Note that this function only erases the element, and that if the element is itself a pointer, the pointed-to memory is not touched in any way. Managing the pointer is the user's responsibility.

Definition at line 706 of file stl_set.h.

4.919.4.20 template<typename _Key , typename _Compare , typename _Alloc > iterator std::set< _Key, _Compare, _Alloc >::find (const key_type & __x) [inline]

Tries to locate an element in a set.

Parameters

__x	Element to be located.

Returns

Iterator pointing to sought-after element, or end() if not found.

This function takes a key and tries to locate the element with which the key matches. If successful the function returns an iterator pointing to the sought after element. If unsuccessful it returns the past-the-end (`end()`) iterator.

Definition at line 794 of file stl_set.h.

4.919.4.21 template<typename _Key , typename _Compare , typename _Alloc > const_iterator std::set< _Key, _Compare, _Alloc >::find (const key_type & __x) const [inline]

Tries to locate an element in a set.

Parameters

__x	Element to be located.

Returns

Iterator pointing to sought-after element, or end() if not found.

This function takes a key and tries to locate the element with which the key matches. If successful the function returns an iterator pointing to the sought after element. If unsuccessful it returns the past-the-end (`end()`) iterator.

Definition at line 798 of file stl_set.h.

4.919.4.22 template<typename _Key , typename _Compare , typename _Alloc > template<typename _Kt > auto std::set< _Key, _Compare, _Alloc >::find (const _Kt & __x) -> decltype(iterator [inline]

Tries to locate an element in a set.

Parameters

__x	Element to be located.

Returns

Iterator pointing to sought-after element, or end() if not found.

This function takes a key and tries to locate the element with which the key matches. If successful the function returns an iterator pointing to the sought after element. If unsuccessful it returns the past-the-end (`end()`) iterator.

Definition at line 804 of file stl_set.h.

4.919.4.23 template<typename _Key , typename _Compare , typename _Alloc > template<typename _Kt > auto std::set< _Key, _Compare, _Alloc >::find (const _Kt & *__x*) const -> decltype(const_iterator [inline]

Tries to locate an element in a set.

Parameters

__x	Element to be located.

Returns

Iterator pointing to sought-after element, or end() if not found.

This function takes a key and tries to locate the element with which the key matches. If successful the function returns an iterator pointing to the sought after element. If unsuccessful it returns the past-the-end (`end()`) iterator.

Definition at line 810 of file stl_set.h.

4.919.4.24 template<typename _Key , typename _Compare , typename _Alloc > allocator_type std::set< _Key, _Compare, _Alloc >::get_allocator ( ) const [inline], [noexcept]

Returns the allocator object with which the set was constructed.

Definition at line 335 of file stl_set.h.

4.919.4.25 template<typename _Key , typename _Compare , typename _Alloc > std::pair<iterator, bool> std::set< _Key, _Compare, _Alloc >::insert (const value_type & *__x*) [inline]

Attempts to insert an element into the set.

Parameters

__x	Element to be inserted.

Returns

A pair, of which the first element is an iterator that points to the possibly inserted element, and the second is a bool that is true if the element was actually inserted.

This function attempts to insert an element into the set. A set relies on unique keys and thus an element is only inserted if it is not already present in the set.

Insertion requires logarithmic time.

Definition at line 509 of file stl_set.h.

References std::pair< _T1, _T2 >::first, and std::pair< _T1, _T2 >::second.

Referenced by std::set< _Key, _Compare, _Alloc >::insert().

4.919.4.26 template<typename _Key , typename _Compare , typename _Alloc > iterator std::set< _Key, _Compare, _Alloc >::insert (const_iterator __position, const value_type & __x) [inline]

Attempts to insert an element into the set.

Parameters

__position	An iterator that serves as a hint as to where the element should be inserted.
__x	Element to be inserted.

Returns

An iterator that points to the element with key of *__x* (may or may not be the element passed in).

This function is not concerned about whether the insertion took place, and thus does not return a boolean like the single-argument insert() does. Note that the first parameter is only a hint and can potentially improve the performance of the insertion process. A bad hint would cause no gains in efficiency.

For more on *hinting*, see: https://gcc.gnu.org/onlinedocs/libstdc++/manual/associative.html#containers.associative.insert_hints

Insertion requires logarithmic time (if the hint is not taken).

Definition at line 546 of file stl_set.h.

4.919.4.27 template<typename _Key , typename _Compare , typename _Alloc > template<typename _InputIterator > void std::set< _Key, _Compare, _Alloc >::insert (_InputIterator *__first*, _InputIterator *__last*) [inline]

A template function that attempts to insert a range of elements.

Parameters

__first	Iterator pointing to the start of the range to be inserted.
__last	Iterator pointing to the end of the range.

Complexity similar to that of the range constructor.

Definition at line 566 of file stl_set.h.

4.919.4.28 template<typename _Key , typename _Compare , typename _Alloc > void std::set< _Key, _Compare, _Alloc >::insert (initializer_list< value_type > *__l*) [inline]

Attempts to insert a list of elements into the set.

Parameters

__l	A std::initializer_list<value_type> of elements to be inserted.

Complexity similar to that of the range constructor.

Definition at line 578 of file stl_set.h.

References std::set< _Key, _Compare, _Alloc >::insert().

4.919.4.29 template<typename _Key , typename _Compare , typename _Alloc > key_compare std::set< _Key, _Compare, _Alloc >::key_comp ( ) const [inline]

Returns the comparison object with which the set was constructed.

Definition at line 327 of file stl_set.h.

4.919.4.30 template<typename _Key , typename _Compare , typename _Alloc > iterator std::set< _Key, _Compare, _Alloc >::lower_bound (const key_type & *__x*) [inline]

Finds the beginning of a subsequence matching given key.

Parameters

__x	Key to be located.

Returns

Iterator pointing to first element equal to or greater than key, or end().

This function returns the first element of a subsequence of elements that matches the given key. If unsuccessful it returns an iterator pointing to the first element that has a greater value than given key or end() if no such element exists.

Definition at line 829 of file stl_set.h.

4.919.4.31 template<typename _Key , typename _Compare , typename _Alloc > const_iterator std::set< _Key, _Compare, _Alloc >::lower_bound (const key_type & __x) const [inline]

Finds the beginning of a subsequence matching given key.

Parameters

__x	Key to be located.

Returns

Iterator pointing to first element equal to or greater than key, or end().

This function returns the first element of a subsequence of elements that matches the given key. If unsuccessful it returns an iterator pointing to the first element that has a greater value than given key or end() if no such element exists.

Definition at line 833 of file stl_set.h.

4.919.4.32 template<typename _Key , typename _Compare , typename _Alloc > template<typename _Kt > auto std::set< _Key, _Compare, _Alloc >::lower_bound (const _Kt & __x) -> decltype(iterator(_M_t._M_lower_bound_tr(__x))) [inline]

Finds the beginning of a subsequence matching given key.

Parameters

__x	Key to be located.

Returns

Iterator pointing to first element equal to or greater than key, or end().

This function returns the first element of a subsequence of elements that matches the given key. If unsuccessful it returns an iterator pointing to the first element that has a greater value than given key or end() if no such element exists.

Definition at line 839 of file stl_set.h.

4.919.4.33 template<typename _Key , typename _Compare , typename _Alloc > template<typename _Kt > auto std::set< _Key, _Compare, _Alloc >::lower_bound (const _Kt & __x) const -> decltype(const_iterator(_M_t._M_lower_bound_tr(__x))) [inline]

Finds the beginning of a subsequence matching given key.

Parameters

__x	Key to be located.

Returns

Iterator pointing to first element equal to or greater than key, or end().

This function returns the first element of a subsequence of elements that matches the given key. If unsuccessful it returns an iterator pointing to the first element that has a greater value than given key or end() if no such element exists.

Definition at line 845 of file stl_set.h.

4.919.4.34 template<typename _Key , typename _Compare , typename _Alloc > size_type std::set< _Key, _Compare, _Alloc >::max_size ( ) const [inline], [noexcept]

Returns the maximum size of the set.

Definition at line 424 of file stl_set.h.

4.919.4.35 template<typename _Key , typename _Compare , typename _Alloc > set& std::set< _Key, _Compare, _Alloc >::operator= (const set< _Key, _Compare, _Alloc > &) [default]

Set assignment operator.

Whether the allocator is copied depends on the allocator traits.

4.919.4.36 template<typename _Key , typename _Compare , typename _Alloc > set& std::set< _Key, _Compare, _Alloc >::operator= (set< _Key, _Compare, _Alloc > &&) [default]

Move assignment operator.

4.919.4.37 template<typename _Key , typename _Compare , typename _Alloc > set& std::set< _Key, _Compare, _Alloc >::operator= (initializer_list< value_type > __l) [inline]

Set list assignment operator.

Parameters

__l	An initializer_list.

This function fills a set with copies of the elements in the initializer list *__l*.

Note that the assignment completely changes the set and that the resulting set's size is the same as the number of elements assigned.

Definition at line 316 of file stl_set.h.

4.919.4.38 template<typename _Key , typename _Compare , typename _Alloc > reverse_iterator std::set< _Key, _Compare, _Alloc >::rbegin ( ) const [inline], [noexcept]

Returns a read-only (constant) iterator that points to the last element in the set. Iteration is done in descending order according to the keys.

Definition at line 362 of file stl_set.h.

4.919.4.39 template<typename _Key , typename _Compare , typename _Alloc > reverse_iterator std::set< _Key, _Compare, _Alloc >::rend ( ) const [inline], [noexcept]

Returns a read-only (constant) reverse iterator that points to the last pair in the set. Iteration is done in descending order according to the keys.

Definition at line 371 of file stl_set.h.

4.919.4.40 template<typename _Key , typename _Compare , typename _Alloc > size_type std::set< _Key, _Compare, _Alloc >::size ( ) const [inline], [noexcept]

Returns the size of the set.

Definition at line 419 of file stl_set.h.

4.919.4.41 template<typename _Key , typename _Compare , typename _Alloc > void std::set< _Key, _Compare, _Alloc >::swap (set< _Key, _Compare, _Alloc > & __x) [inline], [noexcept]

Swaps data with another set.

Parameters

__x	A set of the same element and allocator types.

This exchanges the elements between two sets in constant time. (It is only swapping a pointer, an integer, and an instance of the `Compare` type (which itself is often stateless and empty), so it should be quite fast.) Note that the global std::swap() function is specialized such that std::swap(s1,s2) will feed to this function.

Whether the allocators are swapped depends on the allocator traits.

Definition at line 441 of file stl_set.h.

4.919.4.42 template<typename _Key , typename _Compare , typename _Alloc > iterator std::set< _Key, _Compare, _Alloc >::upper_bound (const key_type & __x) [inline]

Finds the end of a subsequence matching given key.

Parameters

__x	Key to be located.

Returns

Iterator pointing to the first element greater than key, or end().

Definition at line 859 of file stl_set.h.

4.919.4.43 template<typename _Key , typename _Compare , typename _Alloc > const_iterator std::set< _Key, _Compare, _Alloc >::upper_bound (const key_type & __x) const [inline]

Finds the end of a subsequence matching given key.

Parameters

__x	Key to be located.

Returns

Iterator pointing to the first element greater than key, or end().

Definition at line 863 of file stl_set.h.

4.919.4.44 template<typename _Key , typename _Compare , typename _Alloc > template<typename _Kt > auto std::set< _Key, _Compare, _Alloc >::upper_bound (const _Kt & __x) -> decltype(iterator(_M_t._M_upper_bound_tr(__x))) [inline]

Finds the end of a subsequence matching given key.

Parameters

__x	Key to be located.

Returns

Iterator pointing to the first element greater than key, or end().

Definition at line 869 of file stl_set.h.

4.919.4.45 template<typename _Key , typename _Compare , typename _Alloc > template<typename _Kt > auto std::set< _Key, _Compare, _Alloc >::upper_bound (const _Kt & *__x*) const -> decltype(iterator(_M_t._M_upper_bound_tr(__x))) [inline]

Finds the end of a subsequence matching given key.

Parameters

__x	Key to be located.

Returns

Iterator pointing to the first element greater than key, or end().

Definition at line 875 of file stl_set.h.

4.919.4.46 template<typename _Key , typename _Compare , typename _Alloc > value_compare std::set< _Key, _Compare, _Alloc >::value_comp ( ) const [inline]

Returns the comparison object with which the set was constructed.

Definition at line 331 of file stl_set.h.

4.920.1 Detailed Description

template<typename _Res>class std::shared_future< _Res >

Primary template for shared_future.

Definition at line 128 of file future.

4.920.2 Member Typedef Documentation

4.920.2.1 template<typename _Res > using std::__future_base::_Ptr = unique_ptr<_Res, _Result_base::_Deleter> [inherited]

A unique_ptr for result objects.

Definition at line 223 of file future.

4.920.3 Constructor & Destructor Documentation

4.920.3.1 template<typename _Res > std::shared_future< _Res >::shared_future (const shared_future< _Res > & *__sf*) [inline], [noexcept]

Copy constructor.

Definition at line 902 of file future.

4.920.3.2 template<typename _Res > std::shared_future< _Res >::shared_future (future< _Res > && *__uf*) [inline], [noexcept]

Construct from a future rvalue.

Definition at line 905 of file future.

4.920.3.3 template<typename _Res > std::shared_future< _Res >::shared_future (shared_future< _Res > && *__sf*) [inline], [noexcept]

Construct from a shared_future rvalue.

Definition at line 910 of file future.

4.920.4 Member Function Documentation

4.920.4.1 template<typename _Res> __result_type std::__basic_future< _Res >::_M_get_result ( ) const [inline], [protected], [inherited]

Wait for the state to be ready and rethrow any stored exception.

Definition at line 717 of file future.

Referenced by std::future< _Res >::get(), std::future< _Res & >::get(), std::future< void >::get(), std::shared_future< _Res >::get(), and std::shared_future< _Res & >::get().

4.920.4.2 template<typename _Res > const _Res& std::shared_future< _Res >::get ( ) const [inline]

Retrieving the value.

Definition at line 928 of file future.

References std::__basic_future< _Res >::_M_get_result().

4.924.1 Detailed Description

template<typename _Tp>class std::shared_ptr< _Tp >

A smart pointer with reference-counted copy semantics.

A `shared_ptr` object is either empty or *owns* a pointer passed to the constructor. Copies of a `shared_ptr` share ownership of the same pointer. When the last `shared_ptr` that owns the pointer is destroyed or reset, the owned pointer is freed (either by `delete` or by invoking a custom deleter that was passed to the constructor).

A `shared_ptr` also stores another pointer, which is usually (but not always) the same pointer as it owns. The stored pointer can be retrieved by calling the `get()` member function.

The equality and relational operators for `shared_ptr` only compare the stored pointer returned by `get()`, not the owned pointer. To test whether two `shared_ptr` objects share ownership of the same pointer see `std::shared_ptr::owner_before` and `std::owner_less`.

4.924.2 Member Typedef Documentation

4.924.2.1 template<typename _Tp> using std::shared_ptr< _Tp >::element_type = typename __shared_ptr<_Tp>::element_type

The type pointed to by the stored pointer, remove_extent_t<_Tp>

Definition at line 136 of file bits/shared_ptr.h.

4.924.3 Constructor & Destructor Documentation

4.924.3.1 template<typename _Tp> constexpr std::shared_ptr< _Tp >::shared_ptr ( ) [inline], [noexcept]

Construct an empty shared_ptr.

Postcondition

use_count()==0 && get()==0

Definition at line 147 of file bits/shared_ptr.h.

4.924.3.2 template<typename _Tp> std::shared_ptr< _Tp >::shared_ptr (const shared_ptr< _Tp > &) [default], [noexcept]

Copy constructor.

4.924.3.3 template<typename _Tp> template<typename _Yp , typename = _Constructible<_Yp*>> std::shared_ptr< _Tp >::shared_ptr (_Yp * __p) [inline], [explicit]

Construct a shared_ptr that owns the pointer *__p*.

Parameters

__p	A pointer that is convertible to element_type*.

Postcondition

use_count() == 1 && get() == __p

Exceptions

std::bad_alloc,in	which case `delete` *__p* is called.

Definition at line 159 of file bits/shared_ptr.h.

4.924.3.4 template<typename _Tp> template<typename _Yp , typename _Deleter , typename = _Constructible<_Yp*, _Deleter>> std::shared_ptr< _Tp >::shared_ptr (_Yp * __p, _Deleter __d) [inline]

Construct a shared_ptr that owns the pointer *__p* and the deleter *__d*.

Parameters

__p	A pointer.

__d	A deleter.

Postcondition

use_count() == 1 && get() == __p

Exceptions

std::bad_alloc,in	which case *__d(__p)* is called.

Requirements: _Deleter's copy constructor and destructor must not throw

__shared_ptr will release __p by calling __d(__p)

Definition at line 176 of file bits/shared_ptr.h.

4.924.3.5 template<typename _Tp> template<typename _Deleter > std::shared_ptr< _Tp >::shared_ptr (nullptr_t *__p*, _Deleter *__d*) [inline]

Construct a shared_ptr that owns a null pointer and the deleter *__d*.

Parameters

__p	A null pointer constant.
__d	A deleter.

Postcondition

use_count() == 1 && get() == __p

Exceptions

std::bad_alloc,in	which case *__d(__p)* is called.

Requirements: _Deleter's copy constructor and destructor must not throw

The last owner will call __d(__p)

Definition at line 193 of file bits/shared_ptr.h.

4.924.3.6 template<typename _Tp> template<typename _Yp , typename _Deleter , typename _Alloc , typename = _Constructible<_Yp*, _Deleter, _Alloc>> std::shared_ptr< _Tp >::shared_ptr (_Yp * *__p*, _Deleter *__d*, _Alloc *__a*) [inline]

Construct a shared_ptr that owns the pointer *__p* and the deleter *__d*.

Parameters

__p	A pointer.
__d	A deleter.
__a	An allocator.

Postcondition

use_count() == 1 && get() == __p

Exceptions

std::bad_alloc,in	which case *__d(__p)* is called.

Requirements: _Deleter's copy constructor and destructor must not throw _Alloc's copy constructor and destructor must not throw.

__shared_ptr will release __p by calling __d(__p)

Definition at line 213 of file bits/shared_ptr.h.

4.924.3.7 template<typename _Tp> template<typename _Deleter , typename _Alloc > std::shared_ptr< _Tp >::shared_ptr (nullptr_t *__p,* _Deleter *__d,* _Alloc *__a*) [inline]

Construct a shared_ptr that owns a null pointer and the deleter *__d*.

Parameters

__p	A null pointer constant.
__d	A deleter.
__a	An allocator.

Postcondition

use_count() == 1 && get() == __p

Exceptions

std::bad_alloc,in	which case *__d(__p)* is called.

Requirements: _Deleter's copy constructor and destructor must not throw _Alloc's copy constructor and destructor must not throw.

The last owner will call __d(__p)

Definition at line 232 of file bits/shared_ptr.h.

4.924.3.8 template<typename _Tp> template<typename _Yp > std::shared_ptr< _Tp >::shared_ptr (const shared_ptr< _Yp > & *__r,* element_type * *__p*) [inline], [noexcept]

Constructs a `shared_ptr` instance that stores `__p` and shares ownership with `__r`.

Parameters

__r	A `shared_ptr`.
__p	A pointer that will remain valid while `*__r` is valid.

Postcondition

```
get() == __p && use_count() == __r.use_count()
```

This can be used to construct a `shared_ptr` to a sub-object of an object managed by an existing `shared_ptr`. The complete object will remain valid while any `shared_ptr` owns it, even if they don't store a pointer to the complete object.

```
shared_ptr<pair<int,int>> pii(new pair<int,int>());
shared_ptr<int> pi(pii, &pii->first);
assert(pii.use_count() == 2);
```

Definition at line 256 of file bits/shared_ptr.h.

4.924.3.9 template<typename _Tp> template<typename _Yp , typename = _Constructible<const shared_ptr<_Yp>&>> std::shared_ptr< _Tp >::shared_ptr (const shared_ptr< _Yp > & __r) [inline], [noexcept]

If *__r* is empty, constructs an empty shared_ptr; otherwise construct a shared_ptr that shares ownership with *__r*.

Parameters

__r	A shared_ptr.

Postcondition

get() == __r.get() && use_count() == __r.use_count()

Definition at line 295 of file bits/shared_ptr.h.

4.924.3.10 template<typename _Tp> std::shared_ptr< _Tp >::shared_ptr (shared_ptr< _Tp > && *__r*) [inline], [noexcept]

Move-constructs a shared_ptr instance from *__r*.

Parameters

__r	A shared_ptr rvalue.

Postcondition

∗this contains the old value of *__r*, *__r* is empty.

Definition at line 303 of file bits/shared_ptr.h.

4.924.3.11 template<typename _Tp> template<typename _Yp , typename = _Constructible<shared_ptr<_Yp>>> std::shared_ptr< _Tp >::shared_ptr (shared_ptr< _Yp > && *__r*) [inline], [noexcept]

Move-constructs a shared_ptr instance from *__r*.

Parameters

__r	A shared_ptr rvalue.

Postcondition

∗this contains the old value of *__r*, *__r* is empty.

Definition at line 312 of file bits/shared_ptr.h.

4.924.3.12 template<typename _Tp> template<typename _Yp , typename = _Constructible<const weak_ptr<_Yp>&>> std::shared_ptr< _Tp >::shared_ptr (const weak_ptr< _Yp > & *__r*) [inline], [explicit]

Constructs a shared_ptr that shares ownership with *__r* and stores a copy of the pointer stored in *__r*.

Parameters

__r	A weak_ptr.

Postcondition

use_count() == __r.use_count()

Exceptions

bad_weak_ptr	when __r.expired(), in which case the constructor has no effect.

Definition at line 324 of file bits/shared_ptr.h.

4.924.3.13 template<typename _Tp> constexpr std::shared_ptr< _Tp >::shared_ptr (nullptr_t) [inline], [noexcept]

Construct an empty shared_ptr.

Postcondition

use_count() == 0 && get() == nullptr

Definition at line 356 of file bits/shared_ptr.h.

4.924.4 Member Function Documentation

4.924.4.1 template<typename _Tp, _Lock_policy _Lp = __default_lock_policy> element_type* std::__shared_ptr< _Tp, _Lp >::get (void) const [inline], [noexcept], [inherited]

Return the stored pointer.

Definition at line 1324 of file shared_ptr_base.h.

4.924.4.2 template<typename _Tp, _Lock_policy _Lp = __default_lock_policy> std::__shared_ptr< _Tp, _Lp >::operator bool ( ) const [inline], [explicit], [inherited]

Return true if the stored pointer is not null.

Definition at line 1328 of file shared_ptr_base.h.

4.924.4.3 template<typename _Tp, _Lock_policy _Lp = __default_lock_policy> template<typename _Tp1 > bool std::__shared_ptr< _Tp, _Lp >::owner_before (__shared_ptr< _Tp1, _Lp > const & *__rhs*) const [inline], [noexcept], [inherited]

Define an ordering based on ownership.

This function defines a strict weak ordering between two shared_ptr or weak_ptr objects, such that one object is less than the other unless they share ownership of the same pointer, or are both empty.

Definition at line 1358 of file shared_ptr_base.h.

4.924.4.4 template<typename _Tp, _Lock_policy _Lp = __default_lock_policy> template<typename _Tp1 > bool std::__shared_ptr< _Tp, _Lp >::owner_before (__weak_ptr< _Tp1, _Lp > const & *__rhs*) const [inline], [noexcept], [inherited]

Define an ordering based on ownership.

This function defines a strict weak ordering between two shared_ptr or weak_ptr objects, such that one object is less than the other unless they share ownership of the same pointer, or are both empty.

Definition at line 1363 of file shared_ptr_base.h.

4.924.4.5 template<typename _Tp, _Lock_policy _Lp = __default_lock_policy> void std::__shared_ptr< _Tp, _Lp >::swap (__shared_ptr< _Tp, _Lp > & *__other*) [inline], [noexcept], [inherited]

Exchange both the owned pointer and the stored pointer.

Definition at line 1343 of file shared_ptr_base.h.

4.924.4.6 template<typename _Tp, _Lock_policy _Lp = __default_lock_policy> bool std::__shared_ptr< _Tp, _Lp >::unique ( ) const [inline], [noexcept], [inherited]

Return true if use_count() == 1.

Definition at line 1333 of file shared_ptr_base.h.

4.924.4.7 template<typename _Tp, _Lock_policy _Lp = __default_lock_policy> long std::__shared_ptr< _Tp, _Lp >::use_count ( ) const [inline], [noexcept], [inherited]

If *this owns a pointer, return the number of owners, otherwise zero.

Definition at line 1338 of file shared_ptr_base.h.

4.926.1 Detailed Description

template<typename _RandomNumberEngine, size_t __k>class std::shuffle_order_engine< _RandomNumberEngine, __k >

Produces random numbers by combining random numbers from some base engine to produce random numbers with a specifies number of bits __k.

Definition at line 1315 of file random.h.

4.926.2 Member Typedef Documentation

4.926.2.1 template<typename _RandomNumberEngine, size_t __k> typedef _RandomNumberEngine::result_type std::shuffle_order_engine< _RandomNumberEngine, __k >::result_type

The type of the generated random value.

Definition at line 1318 of file random.h.

4.926.3 Constructor & Destructor Documentation

4.926.3.1 template<typename _RandomNumberEngine, size_t __k> std::shuffle_order_engine< _RandomNumberEngine, __k >::shuffle_order_engine ( ) [inline]

Constructs a default shuffle_order_engine engine.

The underlying engine is default constructed as well.

Definition at line 1335 of file random.h.

4.926.3.2 template<typename _RandomNumberEngine, size_t __k> std::shuffle_order_engine< _RandomNumberEngine, __k >::shuffle_order_engine (const _RandomNumberEngine & *__rng*) [inline], [explicit]

Copy constructs a shuffle_order_engine engine.

Copies an existing base class random number generator.

Parameters

__rng	An existing (base class) engine object.

Definition at line 1346 of file random.h.

4.926.3.3 template<typename _RandomNumberEngine, size_t __k> std::shuffle_order_engine< _RandomNumberEngine, __k >::shuffle_order_engine (_RandomNumberEngine && *__rng*) [inline], [explicit]

Move constructs a shuffle_order_engine engine.

Copies an existing base class random number generator.

Parameters

__rng	An existing (base class) engine object.

Definition at line 1357 of file random.h.

4.926.3.4 template<typename _RandomNumberEngine, size_t __k> std::shuffle_order_engine< _RandomNumberEngine, __k >::shuffle_order_engine (result_type *__s*) [inline], [explicit]

Seed constructs a shuffle_order_engine engine.

Constructs the underlying generator engine seeded with __s.

Parameters

__s	A seed value for the base class engine.

Definition at line 1368 of file random.h.

4.926.3.5 template<typename _RandomNumberEngine, size_t __k> template<typename _Sseq , typename = _If_seed_seq<_Sseq>> std::shuffle_order_engine< _RandomNumberEngine, __k >::shuffle_order_engine (_Sseq & *__q*) [inline], [explicit]

Generator construct a shuffle_order_engine engine.

Parameters

__q	A seed sequence.

Definition at line 1379 of file random.h.

4.926.4 Member Function Documentation

4.926.4.1 template<typename _RandomNumberEngine, size_t __k> const _RandomNumberEngine& std::shuffle_order_engine< _RandomNumberEngine, __k >::base ( ) const [inline], [noexcept]

Gets a const reference to the underlying generator engine object.

Definition at line 1422 of file random.h.

4.926.4.2 template<typename _RandomNumberEngine, size_t __k> void std::shuffle_order_engine< _RandomNumberEngine, __k >::discard (unsigned long long *__z*) [inline]

Discard a sequence of random numbers.

Definition at line 1443 of file random.h.

4.926.4.3 template<typename _RandomNumberEngine, size_t __k> static constexpr result_type std::shuffle_order_engine< _RandomNumberEngine, __k >::max ( ) [inline], [static]

Gets the maximum value in the generated random number range.

Definition at line 1436 of file random.h.

References std::max().

4.926.4.4 template<typename _RandomNumberEngine, size_t __k> static constexpr result_type std::shuffle_order_engine< _RandomNumberEngine, __k >::min ( ) [inline], [static]

Gets the minimum value in the generated random number range.

Definition at line 1429 of file random.h.

References std::min().

4.926.4.5 template<typename _RandomNumberEngine , size_t __k> shuffle_order_engine< _RandomNumberEngine, __k >::result_type std::shuffle_order_engine< _RandomNumberEngine, __k >::operator() ( )

Gets the next value in the generated random number sequence.

Definition at line 810 of file bits/random.tcc.

4.926.4.6 template<typename _RandomNumberEngine, size_t __k> void std::shuffle_order_engine< _RandomNumberEngine, __k >::seed ( ) [inline]

Reseeds the shuffle_order_engine object with the default seed for the underlying base class generator engine.

Definition at line 1388 of file random.h.

4.926.4.7 template<typename _RandomNumberEngine, size_t __k> void std::shuffle_order_engine< _RandomNumberEngine, __k >::seed (result_type __s) [inline]

Reseeds the shuffle_order_engine object with the default seed for the underlying base class generator engine.

Definition at line 1399 of file random.h.

4.926.4.8 template<typename _RandomNumberEngine, size_t __k> template<typename _Sseq > _If_seed_seq<_Sseq> std::shuffle_order_engine< _RandomNumberEngine, __k >::seed (_Sseq & __q) [inline]

Reseeds the shuffle_order_engine object with the given seed sequence.

Parameters

__q	A seed generator function.

Definition at line 1412 of file random.h.

4.926.5 Friends And Related Function Documentation

4.926.5.1 template<typename _RandomNumberEngine, size_t __k> template<typename _RandomNumberEngine1 , size_t __k1, typename _CharT , typename _Traits > std::basic_ostream<_CharT, _Traits>& operator<< (std::basic_ostream< _CharT, _Traits > & *__os,* const std::shuffle_order_engine< _RandomNumberEngine1, __k1 > & *__x*) [friend]

Inserts the current state of a shuffle_order_engine random number generator engine __x into the output stream __os.

Parameters

__os	An output stream.
__x	A shuffle_order_engine random number generator engine.

Returns

The output stream with the state of __x inserted or in an error state.

4.926.5.2 template<typename _RandomNumberEngine, size_t __k> bool operator== (const shuffle_order_engine< _RandomNumberEngine, __k > & *__lhs,* const shuffle_order_engine< _RandomNumberEngine, __k > & *__rhs*) [friend]

Compares two shuffle_order_engine random number generator objects of the same type for equality.

Parameters

__lhs	A shuffle_order_engine random number generator object.
__rhs	Another shuffle_order_engine random number generator object.

Returns

true if the infinite sequences of generated values would be equal, false otherwise.

Definition at line 1467 of file random.h.

4.926.5.3 template<typename _RandomNumberEngine, size_t __k> template<typename _RandomNumberEngine1 , size_t __k1, typename _CharT , typename _Traits > std::basic_istream<_CharT, _Traits>& operator>> (std::basic_istream< _CharT, _Traits > & *__is,* std::shuffle_order_engine< _RandomNumberEngine1, __k1 > & *__x*) [friend]

Extracts the current state of a % subtract_with_carry_engine random number generator engine __x from the input stream __is.

Parameters

__is	An input stream.
__x	A shuffle_order_engine random number generator engine.

Returns

The input stream with the state of __x extracted or in an error state.

4.927 std::slice Class Reference

Public Member Functions

- slice ()
- slice (size_t __o, size_t __d, size_t __s)
- size_t size () const
- size_t start () const
- size_t stride () const

4.927.1 Detailed Description

Class defining one-dimensional subset of an array.

The slice class represents a one-dimensional subset of an array, specified by three parameters: start offset, size, and stride. The start offset is the index of the first element of the array that is part of the subset. The size is the total number of elements in the subset. Stride is the distance between each successive array element to include in the subset.

For example, with an array of size 10, and a slice with offset 1, size 3 and stride 2, the subset consists of array elements 1, 3, and 5.

Definition at line 59 of file slice_array.h.

Friends

- class **valarray< _Tp >**

4.928.1 Detailed Description

template<class _Tp>class std::slice_array< _Tp >

Reference to one-dimensional subset of an array.

A slice_array is a reference to the actual elements of an array specified by a slice. The way to get a slice_array is to call operator[](slice) on a valarray. The returned slice_array then permits carrying operations out on the referenced subset of elements in the original valarray. For example, operator+=(valarray) will add values to the subset of elements in the underlying valarray this slice_array refers to.

Parameters

Tp	Element type.

Definition at line 91 of file valarray.

4.933.1 Detailed Description

template<typename _Tp, typename _Sequence = deque<_Tp>>class std::stack< _Tp, _Sequence >

A standard container giving FILO behavior.

Template Parameters

_Tp	Type of element.

_Sequence	Type of underlying sequence, defaults to deque<_Tp>.

Meets many of the requirements of a container, but does not define anything to do with iterators. Very few of the other standard container interfaces are defined.

This is not a true container, but an *adaptor*. It holds another container, and provides a wrapper interface to that container. The wrapper is what enforces strict first-in-last-out stack behavior.

The second template parameter defines the type of the underlying sequence/container. It defaults to std::deque, but it can be any type that supports back, push_back, and pop_back, such as std::list, std::vector, or an appropriate user-defined type.

Members not found in *normal* containers are container_type, which is a typedef for the second Sequence parameter, and push, pop, and top, which are standard stack/FILO operations.

Definition at line 99 of file stl_stack.h.

4.933.2 Constructor & Destructor Documentation

4.933.2.1 template<typename _Tp, typename _Sequence = deque<_Tp>> template<typename _Seq = _Sequence, typename _Requires = typename enable_if<is_default_constructible<_Seq>::value>::type> std::stack< _Tp, _Sequence >::stack ( ) [inline]

Default constructor creates no elements.

Definition at line 162 of file stl_stack.h.

4.933.3 Member Function Documentation

4.933.3.1 template<typename _Tp, typename _Sequence = deque<_Tp>> bool std::stack< _Tp, _Sequence >::empty ( ) const [inline]

Returns true if the stack is empty.

Definition at line 199 of file stl_stack.h.

4.933.3.2 template<typename _Tp, typename _Sequence = deque<_Tp>> void std::stack< _Tp, _Sequence >::pop ( ) [inline]

Removes first element.

This is a typical stack operation. It shrinks the stack by one. The time complexity of the operation depends on the underlying sequence.

Note that no data is returned, and if the first element's data is needed, it should be retrieved before pop() is called.

Definition at line 272 of file stl_stack.h.

4.933.3.3 template<typename _Tp, typename _Sequence = deque<_Tp>> void std::stack< _Tp, _Sequence >::push (const value_type & __x) [inline]

Add data to the top of the stack.

Parameters

__x	Data to be added.

This is a typical stack operation. The function creates an element at the top of the stack and assigns the given data to it. The time complexity of the operation depends on the underlying sequence.

Definition at line 239 of file stl_stack.h.

4.933.3.4 template<typename _Tp, typename _Sequence = deque<_Tp>> size_type std::stack< _Tp, _Sequence >::size ( ) const [inline]

Returns the number of elements in the stack.

Definition at line 204 of file stl_stack.h.

4.933.3.5 template<typename _Tp, typename _Sequence = deque<_Tp>> reference std::stack< _Tp, _Sequence >::top ( ) [inline]

Returns a read/write reference to the data at the first element of the stack.

Definition at line 212 of file stl_stack.h.

4.933.3.6 template<typename _Tp, typename _Sequence = deque<_Tp>> const_reference std::stack< _Tp, _Sequence >::top ( ) const [inline]

Returns a read-only (constant) reference to the data at the first element of the stack.

Definition at line 223 of file stl_stack.h.

The documentation for this class was generated from the following file:

- stl_stack.h

4.934.1 Detailed Description

template<typename _CharT, typename _Traits = std::char_traits<_CharT>>class __gnu_cxx::stdio_filebuf< _CharT, _Traits >

Provides a layer of compatibility for C/POSIX.

This GNU extension provides extensions for working with standard C FILE*'s and POSIX file descriptors. It must be instantiated by the user with the type of character used in the file stream, e.g., stdio_filebuf<char>.

Definition at line 50 of file stdio_filebuf.h.

4.934.2 Constructor & Destructor Documentation

4.934.2.1 template<typename _CharT , typename _Traits = std::char_traits<_CharT>> __gnu_cxx::stdio_filebuf< _CharT, _Traits >::stdio_filebuf ( ) [inline]

deferred initialization

Definition at line 65 of file stdio_filebuf.h.

4.934.2.2 template<typename _CharT , typename _Traits > __gnu_cxx::stdio_filebuf< _CharT, _Traits >::stdio_filebuf (int *__fd*, std::ios_base::openmode *__mode*, size_t *__size* = static_cast<size_t>(BUFSIZ))

Parameters

__fd	An open file descriptor.
__mode	Same meaning as in a standard filebuf.
__size	Optimal or preferred size of internal buffer, in chars.

This constructor associates a file stream buffer with an open POSIX file descriptor. The file descriptor will be automatically closed when the stdio_filebuf is closed/destroyed.

Definition at line 137 of file stdio_filebuf.h.

4.934.2.3 template<typename _CharT , typename _Traits > __gnu_cxx::stdio_filebuf< _CharT, _Traits >::stdio_filebuf (std::__c_file * *__f,* std::ios_base::openmode *__mode,* size_t *__size* = static_cast<size_t>(BUFSIZ))

Parameters

__f	An open `FILE*`.
__mode	Same meaning as in a standard filebuf.
__size	Optimal or preferred size of internal buffer, in chars. Defaults to system's `BUFSIZ`.

This constructor associates a file stream buffer with an open C `FILE*`. The `FILE*` will not be automatically closed when the stdio_filebuf is closed/destroyed.

Definition at line 153 of file stdio_filebuf.h.

4.934.2.4 template<typename _CharT , typename _Traits > __gnu_cxx::stdio_filebuf< _CharT, _Traits >::~stdio_filebuf ( ) [virtual]

Closes the external data stream if the file descriptor constructor was used.

Definition at line 132 of file stdio_filebuf.h.

4.934.3 Member Function Documentation

4.934.3.1 template<typename _CharT, typename _Traits> void std::basic_filebuf< _CharT, _Traits >::_M_create_pback ( ) [inline], [protected], [inherited]

Initializes pback buffers, and moves normal buffers to safety. Assumptions: _M_in_cur has already been moved back

Definition at line 199 of file fstream.

4.934.3.2 template<typename _CharT, typename _Traits> void std::basic_filebuf< _CharT, _Traits >::_M_destroy_pback ( ) throw) [inline], [protected], [inherited]

Deactivates pback buffer contents, and restores normal buffer. Assumptions: The pback buffer has only moved forward.

Definition at line 216 of file fstream.

4.934.3.3 template<typename _CharT, typename _Traits> void std::basic_filebuf< _CharT, _Traits >::_M_set_buffer (streamsize *__off*) [inline], [protected], [inherited]

This function sets the pointers of the internal buffer, both get and put areas. Typically:

__off == egptr() - eback() upon underflow/uflow (**read** mode); __off == 0 upon overflow (**write** mode); __off == -1 upon open, setbuf, seekoff/pos (**uncommitted** mode).

NB: epptr() - pbase() == _M_buf_size - 1, since _M_buf_size reflects the actual allocated memory and the last cell is reserved for the overflow char of a full put area.

Definition at line 459 of file fstream.

4.934.3.4 template<typename _CharT , typename _Traits > basic_filebuf< _CharT, _Traits >::__filebuf_type * std::basic_filebuf< _CharT, _Traits >::close ( ) [inherited]

Closes the currently associated file.

Returns

`this` on success, NULL on failure

If no file is currently open, this function immediately fails.

If a *put buffer area* exists, `overflow(eof)` is called to flush all the characters. The file is then closed.

If any operations fail, this function also fails.

Definition at line 250 of file fstream.tcc.

Referenced by std::basic_ifstream< _CharT, _Traits >::close(), std::basic_ofstream< _CharT, _Traits >::close(), std::basic_fstream< _CharT, _Traits >::close(), and std::basic_filebuf< char_type, traits_type >::~basic_filebuf().

4.934.3.5 template<typename _CharT, typename _Traits = char_traits<_CharT>> char_type* std::basic_streambuf< _CharT, _Traits >::eback ( ) const [inline], [protected], [inherited]

Access to the get area.

These functions are only available to other protected functions, including derived classes.

- eback() returns the beginning pointer for the input sequence
- gptr() returns the next pointer for the input sequence
- egptr() returns the end pointer for the input sequence

Definition at line 489 of file streambuf.

Referenced by std::basic_filebuf< char_type, traits_type >::_M_destroy_pback(), std::basic_streambuf< _Elem, _Tr >::sputbackc(), and std::basic_streambuf< _Elem, _Tr >::sungetc().

4.934.3.6 template<typename _CharT, typename _Traits = char_traits<_CharT>> char_type* std::basic_streambuf< _CharT, _Traits >::egptr ( ) const [inline], [protected], [inherited]

Access to the get area.

These functions are only available to other protected functions, including derived classes.

- eback() returns the beginning pointer for the input sequence
- gptr() returns the next pointer for the input sequence
- egptr() returns the end pointer for the input sequence

Definition at line 495 of file streambuf.

Referenced by std::basic_filebuf< char_type, traits_type >::_M_create_pback(), std::basic_streambuf< _Elem, _Tr >::in_avail(), std::basic_streambuf< _Elem, _Tr >::sbumpc(), std::basic_streambuf< _Elem, _Tr >::sgetc(), std::basic_stringbuf< _CharT, _Traits, _Alloc >::showmanyc(), and std::basic_stringbuf< _CharT, _Traits, _Alloc >::str().

4.934.3.7 template<typename _CharT, typename _Traits = char_traits<_CharT>> char_type* std::basic_streambuf< _CharT, _Traits >::epptr ( ) const [inline], [protected], [inherited]

Access to the put area.

These functions are only available to other protected functions, including derived classes.

- pbase() returns the beginning pointer for the output sequence
- pptr() returns the next pointer for the output sequence
- epptr() returns the end pointer for the output sequence

Definition at line 542 of file streambuf.

Referenced by std::basic_streambuf< _Elem, _Tr >::sputc().

4.934.3.8 template<typename _CharT , typename _Traits = std::char_traits<_CharT>> int __gnu_cxx::stdio_filebuf< _CharT, _Traits >::fd ( ) [inline]

Returns

The underlying file descriptor.

Once associated with an external data stream, this function can be used to access the underlying POSIX file descriptor. Note that there is no way for the library to track what you do with the descriptor, so be careful.

Definition at line 118 of file stdio_filebuf.h.

4.934.3.9 template<typename _CharT , typename _Traits = std::char_traits<_CharT>> std::__c_file* __gnu_cxx::stdio_filebuf< _CharT, _Traits >::file ( ) [inline]

Returns

The underlying FILE*.

This function can be used to access the underlying "C" file pointer. Note that there is no way for the library to track what you do with the file, so be careful.

Definition at line 128 of file stdio_filebuf.h.

4.934.3.10 template<typename _CharT, typename _Traits = char_traits<_CharT>> void std::basic_streambuf< _CharT, _Traits >::gbump (int __n) [inline], [protected], [inherited]

Moving the read position.

Parameters

__n	The delta by which to move.

This just advances the read position without returning any data.

Definition at line 505 of file streambuf.

Referenced by std::basic_streambuf< _Elem, _Tr >::sbumpc(), std::basic_streambuf< _Elem, _Tr >::sputbackc(), std::basic_streambuf< _Elem, _Tr >::sungetc(), and std::basic_streambuf< _Elem, _Tr >::uflow().

4.934.3.11 template<typename _CharT, typename _Traits = char_traits<_CharT>> locale std::basic_streambuf< _CharT, _Traits >::getloc ( ) const [inline], [inherited]

Locale access.

Returns

The current locale in effect.

If pubimbue(loc) has been called, then the most recent `loc` is returned. Otherwise the global locale in effect at the time of construction is returned.

Definition at line 233 of file streambuf.

Referenced by std::basic_streambuf< _Elem, _Tr >::pubimbue().

4.934.3.12 template<typename _CharT, typename _Traits = char_traits<_CharT>> char_type* std::basic_streambuf< _CharT, _Traits >::gptr ( ) const [inline], [protected], [inherited]

Access to the get area.

These functions are only available to other protected functions, including derived classes.

- eback() returns the beginning pointer for the input sequence
- gptr() returns the next pointer for the input sequence
- egptr() returns the end pointer for the input sequence

Definition at line 492 of file streambuf.

Referenced by std::basic_filebuf< char_type, traits_type >::_M_create_pback(), std::basic_filebuf< char_type, traits_type >::_M_destroy_pback(), std::basic_streambuf< _Elem, _Tr >::in_avail(), std::basic_streambuf< _Elem, _Tr >::sbumpc(), std::basic_streambuf< _Elem, _Tr >::sgetc(), std::basic_stringbuf< _CharT, _Traits, _Alloc >::showmanyc(), std::basic_streambuf< _Elem, _Tr >::sputbackc(), std::basic_streambuf< _Elem, _Tr >::sungetc(), and std::basic_streambuf< _Elem, _Tr >::uflow().

4.934.3.13 template<typename _CharT , typename _Traits > void std::basic_filebuf< _CharT, _Traits >::imbue (const locale & *__loc*) [protected], [virtual], [inherited]

Changes translations.

Parameters

__loc	A new locale.

Translations done during I/O which depend on the current locale are changed by this call. The standard adds, *Between invocations of this function a class derived from streambuf can safely cache results of calls to locale functions and to members of facets so obtained.*

Note

Base class version does nothing.

Reimplemented from std::basic_streambuf< _CharT, _Traits >.

Definition at line 1030 of file fstream.tcc.

References std::ios_base::cur.

4.934.3.14 template<typename _CharT, typename _Traits = char_traits<_CharT>> streamsize std::basic_streambuf< _CharT, _Traits >::in_avail ( ) [inline], [inherited]

Looking ahead into the stream.

Returns

The number of characters available.

If a read position is available, returns the number of characters available for reading before the buffer must be refilled. Otherwise returns the derived `showmanyc()`.

Definition at line 291 of file streambuf.

4.934.3.15 template<typename _CharT, typename _Traits> bool std::basic_filebuf< _CharT, _Traits >::is_open ( ) const throw ( ) [inline], [inherited]

Returns true if the external file is open.

Definition at line 265 of file fstream.

Referenced by std::basic_ifstream< _CharT, _Traits >::is_open(), std::basic_ofstream< _CharT, _Traits >::is_open(), and std::basic_fstream< _CharT, _Traits >::is_open().

4.934.3.16 template<typename _CharT , typename _Traits > basic_filebuf< _CharT, _Traits >::__filebuf_type * std::basic_filebuf< _CharT, _Traits >::open (const char * __s, ios_base::openmode __mode) [inherited]

Opens an external file.

Parameters

__s	The name of the file.
__mode	The open mode flags.

Returns

`this` on success, NULL on failure

If a file is already open, this function immediately fails. Otherwise it tries to open the file named *__s* using the flags given in *__mode*.

Table 92, adapted here, gives the relation between openmode combinations and the equivalent `fopen()` flags. (NB: lines app, in|out|app, in|app, binary|app, binary|in|out|app, and binary|in|app per DR 596)

ios_base Flag combination				stdio equivalent
binary	in	out	trunc	app	
		+			w
		+		+	a
				+	a
		+	+		w
	+				r
	+	+			r+
	+	+	+		w+
	+	+		+	a+
	+			+	a+
+		+			wb
+		+		+	ab
+				+	ab
+		+	+		wb
+	+				rb
+	+	+			r+b
+	+	+	+		w+b
+	+	+		+	a+b
+	+			+	a+b

Definition at line 180 of file fstream.tcc.

References std::ios_base::ate, std::ios_base::end, and std::basic_filebuf< _CharT, _Traits >::open().

Referenced by std::basic_filebuf< _CharT, _Traits >::open(), std::basic_filebuf< char_type, traits_type >::open(), std::basic_ifstream< _CharT, _Traits >::open(), std::basic_ofstream< _CharT, _Traits >::open(), and std::basic_fstream< _CharT, _Traits >::open().

4.934.3.17 template<typename _CharT, typename _Traits> __filebuf_type* std::basic_filebuf< _CharT, _Traits >::open (const std::string & *__s*, ios_base::openmode *__mode*) [inline], [inherited]

Opens an external file.

Parameters

__s	The name of the file.
__mode	The open mode flags.

Returns

`this` on success, NULL on failure

Definition at line 331 of file fstream.

4.934.3.18 template<typename _CharT , typename _Traits > basic_filebuf< _CharT, _Traits >::int_type std::basic_filebuf< _CharT, _Traits >::overflow (int_type *__c* = `_Traits::eof()`) [protected], [virtual], [inherited]

Consumes data from the buffer; writes to the controlled sequence.

Parameters

__c	An additional character to consume.

Returns

eof() to indicate failure, something else (usually *__c*, or not_eof())

Informally, this function is called when the output buffer is full (or does not exist, as buffering need not actually be done). If a buffer exists, it is *consumed*, with *some effect* on the controlled sequence. (Typically, the buffer is written out to the sequence verbatim.) In either case, the character *c* is also written out, if *__c* is not `eof()`.

For a formal definition of this function, see a good text such as Langer & Kreft, or [27.5.2.4.5]/3-7.

A functioning output streambuf can be created by overriding only this function (no buffer area will be used).

Note

Base class version does nothing, returns eof().

Reimplemented from std::basic_streambuf< _CharT, _Traits >.

Definition at line 542 of file fstream.tcc.

References std::ios_base::app, std::ios_base::cur, and std::ios_base::out.

4.934.3.19 template<typename _CharT , typename _Traits > basic_filebuf< _CharT, _Traits >::int_type std::basic_filebuf< _CharT, _Traits >::pbackfail (int_type *__c* = `_Traits::eof()`) [protected], [virtual], [inherited]

Tries to back up the input sequence.

Parameters

__c	The character to be inserted back into the sequence.

Returns

eof() on failure, *some other value* on success

Postcondition

The constraints of `gptr()`, `eback()`, and `pptr()` are the same as for `underflow()`.

Note

Base class version does nothing, returns eof().

Reimplemented from std::basic_streambuf< _CharT, _Traits >.

Definition at line 483 of file fstream.tcc.

References std::ios_base::cur, and std::ios_base::in.

4.934.3.20 template<typename _CharT, typename _Traits = char_traits<_CharT>> char_type* std::basic_streambuf< _CharT, _Traits >::pbase ( ) const [inline], [protected], [inherited]

Access to the put area.

These functions are only available to other protected functions, including derived classes.

- pbase() returns the beginning pointer for the output sequence
- pptr() returns the next pointer for the output sequence
- epptr() returns the end pointer for the output sequence

Definition at line 536 of file streambuf.

Referenced by std::basic_stringbuf< _CharT, _Traits, _Alloc >::str().

4.934.3.21 template<typename _CharT, typename _Traits = char_traits<_CharT>> void std::basic_streambuf< _CharT, _Traits >::pbump (int __n) [inline], [protected], [inherited]

Moving the write position.

Parameters

__n	The delta by which to move.

This just advances the write position without returning any data.

Definition at line 552 of file streambuf.

Referenced by std::basic_streambuf< _Elem, _Tr >::sputc().

4.934.3.22 template<typename _CharT, typename _Traits = char_traits<_CharT>> char_type* std::basic_streambuf< _CharT, _Traits >::pptr ( ) const [inline], [protected], [inherited]

Access to the put area.

These functions are only available to other protected functions, including derived classes.

- pbase() returns the beginning pointer for the output sequence
- pptr() returns the next pointer for the output sequence
- epptr() returns the end pointer for the output sequence

Definition at line 539 of file streambuf.

Referenced by std::basic_streambuf< _Elem, _Tr >::sputc(), and std::basic_stringbuf< _CharT, _Traits, _Alloc >::str().

4.934.3.23 template<typename _CharT, typename _Traits = char_traits<_CharT>> locale std::basic_streambuf< _CharT, _Traits >::pubimbue (const locale & __loc) [inline], [inherited]

Entry point for imbue().

Parameters

__loc	The new locale.

Returns

The previous locale.

Calls the derived imbue(__loc).

Definition at line 216 of file streambuf.

4.934.3.24 template<typename _CharT, typename _Traits = char_traits<_CharT>> pos_type std::basic_streambuf< _CharT, _Traits >::pubseekoff (off_type *__off,* ios_base::seekdir *__way,* ios_base::openmode *__mode* = ios_base::in | ios_base::out) [inline], [inherited]

Alters the stream position.

Parameters

__off	Offset.
__way	Value for ios_base::seekdir.
__mode	Value for ios_base::openmode.

Calls virtual seekoff function.

Definition at line 258 of file streambuf.

4.934.3.25 template<typename _CharT, typename _Traits = char_traits<_CharT>> pos_type std::basic_streambuf< _CharT, _Traits >::pubseekpos (pos_type *__sp,* ios_base::openmode *__mode* = ios_base::in | ios_base::out) [inline], [inherited]

Alters the stream position.

Parameters

__sp	Position
__mode	Value for ios_base::openmode.

Calls virtual seekpos function.

Definition at line 270 of file streambuf.

4.934.3.26 template<typename _CharT, typename _Traits = char_traits<_CharT>> basic_streambuf* std::basic_streambuf< _CharT, _Traits >::pubsetbuf (char_type * *__s,* streamsize *__n*) [inline], [inherited]

Entry points for derived buffer functions.

The public versions of `pubfoo` dispatch to the protected derived `foo` member functions, passing the arguments (if any) and returning the result unchanged.

Definition at line 246 of file streambuf.

4.934.3.27 template<typename _CharT, typename _Traits = char_traits<_CharT>> int std::basic_streambuf< _CharT, _Traits >::pubsync ( ) [inline], [inherited]

Calls virtual sync function.

Definition at line 278 of file streambuf.

Referenced by std::wbuffer_convert< _Codecvt, _Elem, _Tr >::sync(), and std::basic_istream< _CharT, _Traits >::sync().

4.934.3.28 template<typename _CharT, typename _Traits = char_traits<_CharT>> int_type std::basic_streambuf< _CharT, _Traits >::sbumpc ( ) [inline], [inherited]

Getting the next character.

Returns

The next character, or eof.

If the input read position is available, returns that character and increments the read pointer, otherwise calls and returns `uflow()`.

Definition at line 323 of file streambuf.

Referenced by std::basic_istream< _CharT, _Traits >::getline(), std::basic_istream< _CharT, _Traits >::ignore(), std::istreambuf_iterator< _CharT, _Traits >::operator++(), and std::basic_streambuf< _Elem, _Tr >::snextc().

4.934.3.29 template<typename _CharT , typename _Traits > basic_filebuf< _CharT, _Traits >::pos_type std::basic_filebuf< _CharT, _Traits >::seekoff (off_type , ios_base::seekdir , ios_base::openmode = ios_base::in | ios_base::out) [protected], [virtual], [inherited]

Alters the stream positions.

Each derived class provides its own appropriate behavior.

Note

Base class version does nothing, returns a `pos_type` that represents an invalid stream position.

Reimplemented from std::basic_streambuf< _CharT, _Traits >.

Definition at line 833 of file fstream.tcc.

References std::ios_base::cur.

4.934.3.30 template<typename _CharT , typename _Traits > basic_filebuf< _CharT, _Traits >::pos_type std::basic_filebuf< _CharT, _Traits >::seekpos (pos_type , ios_base::openmode = ios_base::in | ios_base::out) [protected], [virtual], [inherited]

Alters the stream positions.

Each derived class provides its own appropriate behavior.

Note

Base class version does nothing, returns a `pos_type` that represents an invalid stream position.

Reimplemented from std::basic_streambuf< _CharT, _Traits >.

Definition at line 893 of file fstream.tcc.

References std::ios_base::beg.

4.934.3.31 template<typename _CharT , typename _Traits > basic_filebuf< _CharT, _Traits >::__streambuf_type * std::basic_filebuf< _CharT, _Traits >::setbuf (char_type * __s, streamsize __n) [protected], [virtual], [inherited]

Manipulates the buffer.

Parameters

__s	Pointer to a buffer area.
__n	Size of *__s*.

Returns

`this`

If no file has been opened, and both *__s* and *__n* are zero, then the stream becomes unbuffered. Otherwise, *__s* is used as a buffer; see https://gcc.gnu.org/onlinedocs/libstdc++/manual/streambufs.html#io.streambuf.buffering for more.

Reimplemented from std::basic_streambuf< _CharT, _Traits >.

Definition at line 804 of file fstream.tcc.

4.934.3.32 template<typename _CharT, typename _Traits = char_traits<_CharT>> void std::basic_streambuf< _CharT, _Traits >::setg (char_type * *__gbeg*, char_type * *__gnext*, char_type * *__gend*) [inline], [protected], [inherited]

Setting the three read area pointers.

Parameters

__gbeg	A pointer.
__gnext	A pointer.
__gend	A pointer.

Postcondition

__gbeg == `eback()`, *__gnext* == `gptr()`, and *__gend* == `egptr()`

Definition at line 516 of file streambuf.

Referenced by std::basic_filebuf< char_type, traits_type >::_M_create_pback(), std::basic_filebuf< char_type, traits_type >::_M_destroy_pback(), and std::basic_filebuf< char_type, traits_type >::_M_set_buffer().

4.934.3.33 template<typename _CharT, typename _Traits = char_traits<_CharT>> void std::basic_streambuf< _CharT, _Traits >::setp (char_type * *__pbeg*, char_type * *__pend*) [inline], [protected], [inherited]

Setting the three write area pointers.

Parameters

__pbeg	A pointer.
__pend	A pointer.

Postcondition

__pbeg == `pbase()`, *__pbeg* == `pptr()`, and *__pend* == `epptr()`

Definition at line 562 of file streambuf.

Referenced by std::basic_filebuf< char_type, traits_type >::_M_set_buffer().

4.934.3.34 template<typename _CharT, typename _Traits = char_traits<_CharT>> int_type std::basic_streambuf< _CharT, _Traits >::sgetc ( ) [inline], [inherited]

Getting the next character.

Returns

The next character, or eof.

If the input read position is available, returns that character, otherwise calls and returns `underflow()`. Does not move the read position after fetching the character.

Definition at line 345 of file streambuf.

Referenced by std::basic_istream< _CharT, _Traits >::get(), std::basic_istream< _CharT, _Traits >::getline(), std::basic_istream< _CharT, _Traits >::ignore(), std::istreambuf_iterator< _CharT, _Traits >::operator++(), std::basic_istream< _CharT, _Traits >::sentry::sentry(), and std::basic_streambuf< _Elem, _Tr >::snextc().

4.934.3.35 template<typename _CharT, typename _Traits = char_traits<_CharT>> streamsize std::basic_streambuf< _CharT, _Traits >::sgetn (char_type * __s, streamsize __n) [inline], [inherited]

Entry point for xsgetn.

Parameters

__s	A buffer area.
__n	A count.

Returns xsgetn(__s,__n). The effect is to fill *__s*[0] through *__s*[__n-1] with characters from the input sequence, if possible.

Definition at line 364 of file streambuf.

4.934.3.36 template<typename _CharT , typename _Traits > streamsize std::basic_filebuf< _CharT, _Traits >::showmanyc ( ) [protected], [virtual], [inherited]

Investigating the data available.

Returns

An estimate of the number of characters available in the input sequence, or -1.

If it returns a positive value, then successive calls to `underflow()` *will not return* `traits::eof()` *until at least that number of characters have been supplied. If* `showmanyc()` *returns -1, then calls to* `underflow()` *or* `uflow()` *will fail.* [27.5.2.4.3]/1

Note

Base class version does nothing, returns zero.
The standard adds that *the intention is not only that the calls [to underflow or uflow] will not return* `eof()` *but that they will return immediately.*
The standard adds that *the morphemes of* `showmanyc` *are* ***es-how-many-see****, not* ***show-manic****.*

Reimplemented from std::basic_streambuf< _CharT, _Traits >.

Definition at line 298 of file fstream.tcc.

References std::ios_base::binary, and std::ios_base::in.

4.934.3.37 template<typename _CharT, typename _Traits = char_traits<_CharT>> int_type std::basic_streambuf< _CharT, _Traits >::snextc ( ) [inline], [inherited]

Getting the next character.

Returns

The next character, or eof.

Calls `sbumpc()`, and if that function returns `traits::eof()`, so does this function. Otherwise, `sgetc()`.

Definition at line 305 of file streambuf.

Referenced by std::basic_istream< _CharT, _Traits >::get(), std::basic_istream< _CharT, _Traits >::getline(), std::basic_istream< _CharT, _Traits >::ignore(), and std::basic_istream< _CharT, _Traits >::sentry::sentry().

4.934.3.38 template<typename _CharT, typename _Traits = char_traits<_CharT>> int_type std::basic_streambuf< _CharT, _Traits >::sputbackc (char_type __c) [inline], [inherited]

Pushing characters back into the input stream.

Parameters

__c	The character to push back.

Returns

The previous character, if possible.

Similar to sungetc(), but *__c* is pushed onto the stream instead of *the previous character.* If successful, the next character fetched from the input stream will be *__c*.

Definition at line 379 of file streambuf.

Referenced by std::basic_istream< _CharT, _Traits >::putback().

4.934.3.39 template<typename _CharT, typename _Traits = char_traits<_CharT>> int_type std::basic_streambuf< _CharT, _Traits >::sputc (char_type __c) [inline], [inherited]

Entry point for all single-character output functions.

Parameters

__c	A character to output.

Returns

__c, if possible.

One of two public output functions.

If a write position is available for the output sequence (i.e., the buffer is not full), stores *__c* in that position, increments the position, and returns `traits::to_int_type(__c)`. If a write position is not available, returns `overflow(__c)`.

Definition at line 431 of file streambuf.

Referenced by std::basic_istream< _CharT, _Traits >::get(), and std::ostreambuf_iterator< _CharT, _Traits >::operator=().

4.934.3.40 template<typename _CharT, typename _Traits = char_traits<_CharT>> streamsize std::basic_streambuf< _CharT, _Traits >::sputn (const char_type * __s, streamsize __n) [inline], [inherited]

Entry point for all single-character output functions.

Parameters

__s	A buffer read area.
__n	A count.

One of two public output functions.

Returns xsputn(__s,__n). The effect is to write *__s*[0] through *__s*[__n-1] to the output sequence, if possible.

Definition at line 457 of file streambuf.

4.934.3.41 template<typename _CharT, typename _Traits = char_traits<_CharT>> int_type std::basic_streambuf< _CharT, _Traits >::sungetc ( ) [inline], [inherited]

Moving backwards in the input stream.

Returns

The previous character, if possible.

If a putback position is available, this function decrements the input pointer and returns that character. Otherwise, calls and returns pbackfail(). The effect is to *unget* the last character *gotten*.

Definition at line 404 of file streambuf.

Referenced by std::basic_istream< _CharT, _Traits >::unget().

4.934.3.42 template<typename _CharT , typename _Traits > int std::basic_filebuf< _CharT, _Traits >::sync ( ) [protected], [virtual], [inherited]

Synchronizes the buffer arrays with the controlled sequences.

Returns

-1 on failure.

Each derived class provides its own appropriate behavior, including the definition of *failure*.

Note

Base class version does nothing, returns zero.

Reimplemented from std::basic_streambuf< _CharT, _Traits >.

Definition at line 1013 of file fstream.tcc.

4.934.3.43 template<typename _CharT, typename _Traits = char_traits<_CharT>> virtual int_type std::basic_streambuf< _CharT, _Traits >::uflow ( ) [inline], [protected], [virtual], [inherited]

Fetches more data from the controlled sequence.

Returns

The first character from the *pending sequence*.

Informally, this function does the same thing as `underflow()`, and in fact is required to call that function. It also returns the new character, like `underflow()` does. However, this function also moves the read position forward by one.

Reimplemented in __gnu_cxx::stdio_sync_filebuf< _CharT, _Traits >.

Definition at line 707 of file streambuf.

Referenced by std::basic_streambuf< _Elem, _Tr >::sbumpc().

4.934.3.44 template<typename _CharT , typename _Traits > basic_filebuf< _CharT, _Traits >::int_type std::basic_filebuf< _CharT, _Traits >::underflow ( ) [protected], [virtual], [inherited]

Fetches more data from the controlled sequence.

Returns

The first character from the *pending sequence*.

Informally, this function is called when the input buffer is exhausted (or does not exist, as buffering need not actually be done). If a buffer exists, it is *refilled*. In either case, the next available character is returned, or `traits::eof()` to indicate a null pending sequence.

For a formal definition of the pending sequence, see a good text such as Langer & Kreft, or [27.5.2.4.3]/7-14.

A functioning input streambuf can be created by overriding only this function (no buffer area will be used). For an example, see https://gcc.gnu.org/onlinedocs/libstdc++/manual/streambufs.html

Note

Base class version does nothing, returns eof().

Reimplemented from std::basic_streambuf< _CharT, _Traits >.

Definition at line 324 of file fstream.tcc.

References std::ios_base::in, and std::min().

4.934.3.45 template<typename _CharT , typename _Traits > streamsize std::basic_filebuf< _CharT, _Traits >::xsgetn (char_type * __s, streamsize __n) [protected], [virtual], [inherited]

Multiple character extraction.

Parameters

__s	A buffer area.
__n	Maximum number of characters to assign.

Returns

The number of characters assigned.

Fills *__s*[0] through *__s*[__n-1] with characters from the input sequence, as if by `sbumpc()`. Stops when either *__n* characters have been copied, or when `traits::eof()` would be copied.

It is expected that derived classes provide a more efficient implementation by overriding this definition.

Reimplemented from std::basic_streambuf< _CharT, _Traits >.

Definition at line 670 of file fstream.tcc.

References std::ios_base::in.

4.934.3.46 template<typename _CharT , typename _Traits > streamsize std::basic_filebuf< _CharT, _Traits >::xsputn (const char_type * __s, streamsize __n) [protected], [virtual], [inherited]

Multiple character insertion.

Parameters

__s	A buffer area.
__n	Maximum number of characters to write.

Returns

The number of characters written.

Writes *__s*[0] through *__s*[__n-1] to the output sequence, as if by `sputc()`. Stops when either *n* characters have been copied, or when `sputc()` would return `traits::eof()`.

It is expected that derived classes provide a more efficient implementation by overriding this definition.

Reimplemented from std::basic_streambuf< _CharT, _Traits >.

Definition at line 756 of file fstream.tcc.

References std::ios_base::app, std::min(), and std::ios_base::out.

4.934.4 Member Data Documentation

4.934.4.1 template<typename _CharT, typename _Traits> char_type* std::basic_filebuf< _CharT, _Traits >::_M_buf [protected], [inherited]

Pointer to the beginning of internal buffer.

Definition at line 136 of file fstream.

Referenced by std::basic_filebuf< char_type, traits_type >::_M_destroy_pback(), and std::basic_filebuf< char_type, traits_type >::_M_set_buffer().

4.934.4.2 template<typename _CharT, typename _Traits = char_traits<_CharT>> locale std::basic_streambuf< _CharT, _Traits >::_M_buf_locale [protected], [inherited]

Current locale setting.

Definition at line 199 of file streambuf.

Referenced by std::basic_filebuf< _CharT, _Traits >::basic_filebuf(), std::basic_streambuf< _Elem, _Tr >::getloc(), and std::basic_streambuf< _Elem, _Tr >::pubimbue().

4.934.4.3 template<typename _CharT, typename _Traits> size_t std::basic_filebuf< _CharT, _Traits >::_M_buf_size [protected], [inherited]

Actual size of internal buffer. This number is equal to the size of the put area + 1 position, reserved for the overflow char of a full area.

Definition at line 143 of file fstream.

Referenced by std::basic_filebuf< char_type, traits_type >::_M_set_buffer().

4.934.4.4 template<typename _CharT, typename _Traits> char* std::basic_filebuf< _CharT, _Traits >::_M_ext_buf [protected], [inherited]

Buffer for external characters. Used for input when codecvt::always_noconv() == false. When valid, this corresponds to eback().

Definition at line 178 of file fstream.

4.934.4.5 template<typename _CharT, typename _Traits> streamsize std::basic_filebuf< _CharT, _Traits >::_M_ext_buf_size [protected], [inherited]

Size of buffer held by _M_ext_buf.

Definition at line 183 of file fstream.

4.934.4.6 template<typename _CharT, typename _Traits> const char* std::basic_filebuf< _CharT, _Traits >::_M_ext_next [protected], [inherited]

Pointers into the buffer held by _M_ext_buf that delimit a subsequence of bytes that have been read but not yet converted. When valid, _M_ext_next corresponds to egptr().

Definition at line 190 of file fstream.

4.934.4.7 template<typename _CharT, typename _Traits = char_traits<_CharT>> char_type* std::basic_streambuf< _CharT, _Traits >::_M_in_beg [protected], [inherited]

Start of get area.

Definition at line 191 of file streambuf.

Referenced by std::basic_streambuf< _Elem, _Tr >::eback(), and std::basic_streambuf< _Elem, _Tr >::setg().

4.934.4.8 template<typename _CharT, typename _Traits = char_traits<_CharT>> char_type* std::basic_streambuf< _CharT, _Traits >::_M_in_cur [protected], [inherited]

Current read area.

Definition at line 192 of file streambuf.

Referenced by std::basic_streambuf< _Elem, _Tr >::gbump(), std::basic_streambuf< _Elem, _Tr >::gptr(), and std::basic_streambuf< _Elem, _Tr >::setg().

4.934.4.9 template<typename _CharT, typename _Traits = char_traits<_CharT>> char_type* std::basic_streambuf< _CharT, _Traits >::_M_in_end [protected], [inherited]

End of get area.

Definition at line 193 of file streambuf.

Referenced by std::basic_streambuf< _Elem, _Tr >::egptr(), and std::basic_streambuf< _Elem, _Tr >::setg().

4.934.4.10 template<typename _CharT, typename _Traits> ios_base::openmode std::basic_filebuf< _CharT, _Traits >::_M_mode [protected], [inherited]

Place to stash in || out || in | out settings for current filebuf.

Definition at line 121 of file fstream.

Referenced by std::basic_filebuf< char_type, traits_type >::_M_set_buffer().

4.934.4.11 template<typename _CharT, typename _Traits = char_traits<_CharT>> char_type* std::basic_streambuf< _CharT, _Traits >::_M_out_beg [protected], [inherited]

Start of put area.

Definition at line 194 of file streambuf.

Referenced by std::basic_streambuf< _Elem, _Tr >::pbase(), and std::basic_streambuf< _Elem, _Tr >::setp().

4.934.4.12 template<typename _CharT, typename _Traits = char_traits<_CharT>> char_type* std::basic_streambuf< _CharT, _Traits >::_M_out_cur [protected], [inherited]

Current put area.

Definition at line 195 of file streambuf.

Referenced by std::basic_streambuf< _Elem, _Tr >::pbump(), std::basic_streambuf< _Elem, _Tr >::pptr(), and std::basic_streambuf< _Elem, _Tr >::setp().

4.934.4.13 template<typename _CharT, typename _Traits = char_traits<_CharT>> char_type* std::basic_streambuf< _CharT, _Traits >::_M_out_end [protected], [inherited]

End of put area.

Definition at line 196 of file streambuf.

Referenced by std::basic_streambuf< _Elem, _Tr >::epptr(), and std::basic_streambuf< _Elem, _Tr >::setp().

4.934.4.14 template<typename _CharT, typename _Traits> char_type std::basic_filebuf< _CharT, _Traits >::_M_pback [protected], [inherited]

Necessary bits for putback buffer management.

Note

pbacks of over one character are not currently supported.

Definition at line 164 of file fstream.

Referenced by std::basic_filebuf< char_type, traits_type >::_M_create_pback().

4.934.4.15 template<typename _CharT, typename _Traits> char_type* std::basic_filebuf< _CharT, _Traits >::_M_pback_cur_save [protected], [inherited]

Necessary bits for putback buffer management.

Note

pbacks of over one character are not currently supported.

Definition at line 165 of file fstream.

Referenced by std::basic_filebuf< char_type, traits_type >::_M_create_pback(), and std::basic_filebuf< char_type, traits_type >::_M_destroy_pback().

4.934.4.16 template<typename _CharT, typename _Traits> char_type* std::basic_filebuf< _CharT, _Traits >::_M_pback_end_save [protected], [inherited]

Necessary bits for putback buffer management.

Note

pbacks of over one character are not currently supported.

Definition at line 166 of file fstream.

Referenced by std::basic_filebuf< char_type, traits_type >::_M_create_pback(), and std::basic_filebuf< char_type, traits_type >::_M_destroy_pback().

4.934.4.17 template<typename _CharT, typename _Traits> bool std::basic_filebuf< _CharT, _Traits >::_M_pback_init [protected], [inherited]

Necessary bits for putback buffer management.

Note

pbacks of over one character are not currently supported.

Definition at line 167 of file fstream.

Referenced by std::basic_filebuf< char_type, traits_type >::_M_create_pback(), and std::basic_filebuf< char_type, traits_type >::_M_destroy_pback().

4.934.4.18 template<typename _CharT, typename _Traits> bool std::basic_filebuf< _CharT, _Traits >::_M_reading [protected], [inherited]

_M_reading == false && _M_writing == false for **uncommitted** mode; _M_reading == true for **read** mode; _M_writing == true for **write** mode;

NB: _M_reading == true && _M_writing == true is unused.

Definition at line 155 of file fstream.

4.935.1 Detailed Description

template<typename _CharT, typename _Traits = std::char_traits<_CharT>>class __gnu_cxx::stdio_sync_filebuf< _CharT, _Traits >

Provides a layer of compatibility for C.

This GNU extension provides extensions for working with standard C FILE*'s. It must be instantiated by the user with the type of character used in the file stream, e.g., stdio_filebuf<char>.

Definition at line 57 of file stdio_sync_filebuf.h.

4.935.2 Member Function Documentation

4.935.2.1 template<typename _CharT, typename _Traits = char_traits<_CharT>> char_type* std::basic_streambuf< _CharT, _Traits >::eback ( ) const [inline], [protected], [inherited]

Access to the get area.

These functions are only available to other protected functions, including derived classes.

- eback() returns the beginning pointer for the input sequence
- gptr() returns the next pointer for the input sequence
- egptr() returns the end pointer for the input sequence

Definition at line 489 of file streambuf.

Referenced by std::basic_filebuf< char_type, traits_type >::_M_destroy_pback(), std::basic_streambuf< _Elem, _Tr >::sputbackc(), and std::basic_streambuf< _Elem, _Tr >::sungetc().

4.935.2.2 template<typename _CharT, typename _Traits = char_traits<_CharT>> char_type* std::basic_streambuf< _CharT, _Traits >::egptr ( ) const [inline], [protected], [inherited]

Access to the get area.

These functions are only available to other protected functions, including derived classes.

- eback() returns the beginning pointer for the input sequence
- gptr() returns the next pointer for the input sequence
- egptr() returns the end pointer for the input sequence

Definition at line 495 of file streambuf.

Referenced by std::basic_filebuf< char_type, traits_type >::_M_create_pback(), std::basic_streambuf< _Elem, _Tr >::in_avail(), std::basic_streambuf< _Elem, _Tr >::sbumpc(), std::basic_streambuf< _Elem, _Tr >::sgetc(), std::basic_stringbuf< _CharT, _Traits, _Alloc >::showmanyc(), and std::basic_stringbuf< _CharT, _Traits, _Alloc >::str().

4.935.2.3 template<typename _CharT, typename _Traits = char_traits<_CharT>> char_type* std::basic_streambuf< _CharT, _Traits >::epptr ( ) const [inline], [protected], [inherited]

Access to the put area.

These functions are only available to other protected functions, including derived classes.

- pbase() returns the beginning pointer for the output sequence

- pptr() returns the next pointer for the output sequence
- epptr() returns the end pointer for the output sequence

Definition at line 542 of file streambuf.

Referenced by std::basic_streambuf< _Elem, _Tr >::sputc().

4.935.2.4 template<typename _CharT , typename _Traits = std::char_traits<_CharT>> std::__c_file* __gnu_cxx::stdio_sync_filebuf< _CharT, _Traits >::file ( ) [inline]

Returns

The underlying FILE*.

This function can be used to access the underlying C file pointer. Note that there is no way for the library to track what you do with the file, so be careful.

Definition at line 118 of file stdio_sync_filebuf.h.

4.935.2.5 template<typename _CharT, typename _Traits = char_traits<_CharT>> void std::basic_streambuf< _CharT, _Traits >::gbump (int __n) [inline], [protected], [inherited]

Moving the read position.

Parameters

__n	The delta by which to move.

This just advances the read position without returning any data.

Definition at line 505 of file streambuf.

Referenced by std::basic_streambuf< _Elem, _Tr >::sbumpc(), std::basic_streambuf< _Elem, _Tr >::sputbackc(), std::basic_streambuf< _Elem, _Tr >::sungetc(), and std::basic_streambuf< _Elem, _Tr >::uflow().

4.935.2.6 template<typename _CharT, typename _Traits = char_traits<_CharT>> locale std::basic_streambuf< _CharT, _Traits >::getloc ( ) const [inline], [inherited]

Locale access.

Returns

The current locale in effect.

If pubimbue(loc) has been called, then the most recent `loc` is returned. Otherwise the global locale in effect at the time of construction is returned.

Definition at line 233 of file streambuf.

Referenced by std::basic_streambuf< _Elem, _Tr >::pubimbue().

4.935.2.7 template<typename _CharT, typename _Traits = char_traits<_CharT>> char_type* std::basic_streambuf< _CharT, _Traits >::gptr ( ) const [inline], [protected], [inherited]

Access to the get area.

These functions are only available to other protected functions, including derived classes.

- eback() returns the beginning pointer for the input sequence
- gptr() returns the next pointer for the input sequence

- egptr() returns the end pointer for the input sequence

Definition at line 492 of file streambuf.

Referenced by std::basic_filebuf< char_type, traits_type >::_M_create_pback(), std::basic_filebuf< char_type, traits_type >::_M_destroy_pback(), std::basic_streambuf< _Elem, _Tr >::in_avail(), std::basic_streambuf< _Elem, _Tr >::sbumpc(), std::basic_streambuf< _Elem, _Tr >::sgetc(), std::basic_stringbuf< _CharT, _Traits, _Alloc >::showmanyc(), std::basic_streambuf< _Elem, _Tr >::sputbackc(), std::basic_streambuf< _Elem, _Tr >::sungetc(), and std::basic_streambuf< _Elem, _Tr >::uflow().

4.935.2.8 template<typename _CharT, typename _Traits = char_traits<_CharT>> virtual void std::basic_streambuf< _CharT, _Traits >::imbue (const locale & *__loc*) [inline], [protected], [virtual], [inherited]

Changes translations.

Parameters

__loc	A new locale.

Translations done during I/O which depend on the current locale are changed by this call. The standard adds, *Between invocations of this function a class derived from streambuf can safely cache results of calls to locale functions and to members of facets so obtained.*

Note

Base class version does nothing.

Reimplemented in std::basic_filebuf< _CharT, _Traits >, std::basic_filebuf< _CharT, encoding_char_traits< _CharT > >, and std::basic_filebuf< char_type, traits_type >.

Definition at line 583 of file streambuf.

Referenced by std::basic_streambuf< _Elem, _Tr >::pubimbue().

4.935.2.9 template<typename _CharT, typename _Traits = char_traits<_CharT>> streamsize std::basic_streambuf< _CharT, _Traits >::in_avail ( ) [inline], [inherited]

Looking ahead into the stream.

Returns

The number of characters available.

If a read position is available, returns the number of characters available for reading before the buffer must be refilled. Otherwise returns the derived `showmanyc()`.

Definition at line 291 of file streambuf.

4.935.2.10 template<typename _CharT , typename _Traits = std::char_traits<_CharT>> virtual int_type __gnu_cxx::stdio_sync_filebuf< _CharT, _Traits >::overflow (int_type *__c* = `traits_type::eof()`) [inline], [protected], [virtual]

Consumes data from the buffer; writes to the controlled sequence.

Parameters

__c	An additional character to consume.

Returns

eof() to indicate failure, something else (usually __c, or not_eof())

Informally, this function is called when the output buffer is full (or does not exist, as buffering need not actually be done). If a buffer exists, it is *consumed*, with *some effect* on the controlled sequence. (Typically, the buffer is written out to the sequence verbatim.) In either case, the character *c* is also written out, if __c is not `eof()`.

For a formal definition of this function, see a good text such as Langer & Kreft, or [27.5.2.4.5]/3-7.

A functioning output streambuf can be created by overriding only this function (no buffer area will be used).

Note

Base class version does nothing, returns eof().

Reimplemented from std::basic_streambuf< _CharT, _Traits >.

Definition at line 171 of file stdio_sync_filebuf.h.

4.935.2.11 template<typename _CharT , typename _Traits = std::char_traits<_CharT>> virtual int_type __gnu_cxx::stdio_sync_filebuf< _CharT, _Traits >::pbackfail (int_type __c = traits_type::eof()) [inline], [protected], [virtual]

Tries to back up the input sequence.

Parameters

__c	The character to be inserted back into the sequence.

Returns

eof() on failure, *some other value* on success

Postcondition

The constraints of `gptr()`, `eback()`, and `pptr()` are the same as for `underflow()`.

Note

Base class version does nothing, returns eof().

Reimplemented from std::basic_streambuf< _CharT, _Traits >.

Definition at line 146 of file stdio_sync_filebuf.h.

4.935.2.12 template<typename _CharT, typename _Traits = char_traits<_CharT>> char_type* std::basic_streambuf< _CharT, _Traits >::pbase ( ) const [inline], [protected], [inherited]

Access to the put area.

These functions are only available to other protected functions, including derived classes.

- pbase() returns the beginning pointer for the output sequence
- pptr() returns the next pointer for the output sequence

- epptr() returns the end pointer for the output sequence

Definition at line 536 of file streambuf.

Referenced by std::basic_stringbuf< _CharT, _Traits, _Alloc >::str().

4.935.2.13 template<typename _CharT, typename _Traits = char_traits<_CharT>> void std::basic_streambuf< _CharT, _Traits >::pbump (int __n) [inline], [protected], [inherited]

Moving the write position.

Parameters

__n	The delta by which to move.

This just advances the write position without returning any data.

Definition at line 552 of file streambuf.

Referenced by std::basic_streambuf< _Elem, _Tr >::sputc().

4.935.2.14 template<typename _CharT, typename _Traits = char_traits<_CharT>> char_type* std::basic_streambuf< _CharT, _Traits >::pptr ( ) const [inline], [protected], [inherited]

Access to the put area.

These functions are only available to other protected functions, including derived classes.

- pbase() returns the beginning pointer for the output sequence
- pptr() returns the next pointer for the output sequence
- epptr() returns the end pointer for the output sequence

Definition at line 539 of file streambuf.

Referenced by std::basic_streambuf< _Elem, _Tr >::sputc(), and std::basic_stringbuf< _CharT, _Traits, _Alloc >::str().

4.935.2.15 template<typename _CharT, typename _Traits = char_traits<_CharT>> locale std::basic_streambuf< _CharT, _Traits >::pubimbue (const locale & __loc) [inline], [inherited]

Entry point for imbue().

Parameters

__loc	The new locale.

Returns

The previous locale.

Calls the derived imbue(__loc).

Definition at line 216 of file streambuf.

4.935.2.16 template<typename _CharT, typename _Traits = char_traits<_CharT>> pos_type std::basic_streambuf< _CharT, _Traits >::pubseekoff (off_type *__off,* ios_base::seekdir *__way,* ios_base::openmode *__mode* = ios_base::in | ios_base::out) [inline], [inherited]

Alters the stream position.

Parameters

__off	Offset.
__way	Value for ios_base::seekdir.
__mode	Value for ios_base::openmode.

Calls virtual seekoff function.

Definition at line 258 of file streambuf.

4.935.2.17 template<typename _CharT, typename _Traits = char_traits<_CharT>> pos_type std::basic_streambuf< _CharT, _Traits >::pubseekpos (pos_type *__sp,* ios_base::openmode *__mode* = ios_base::in | ios_base::out) [inline], [inherited]

Alters the stream position.

Parameters

__sp	Position
__mode	Value for ios_base::openmode.

Calls virtual seekpos function.

Definition at line 270 of file streambuf.

4.935.2.18 template<typename _CharT, typename _Traits = char_traits<_CharT>> basic_streambuf* std::basic_streambuf< _CharT, _Traits >::pubsetbuf (char_type * *__s,* streamsize *__n*) [inline], [inherited]

Entry points for derived buffer functions.

The public versions of `pubfoo` dispatch to the protected derived `foo` member functions, passing the arguments (if any) and returning the result unchanged.

Definition at line 246 of file streambuf.

4.935.2.19 template<typename _CharT, typename _Traits = char_traits<_CharT>> int std::basic_streambuf< _CharT, _Traits >::pubsync ( ) [inline], [inherited]

Calls virtual sync function.

Definition at line 278 of file streambuf.

Referenced by std::wbuffer_convert< _Codecvt, _Elem, _Tr >::sync(), and std::basic_istream< _CharT, _Traits >::sync().

4.935.2.20 template<typename _CharT, typename _Traits = char_traits<_CharT>> int_type std::basic_streambuf< _CharT, _Traits >::sbumpc ( ) [inline], [inherited]

Getting the next character.

Returns

The next character, or eof.

If the input read position is available, returns that character and increments the read pointer, otherwise calls and returns `uflow()`.

Definition at line 323 of file streambuf.

Referenced by std::basic_istream< _CharT, _Traits >::getline(), std::basic_istream< _CharT, _Traits >::ignore(), std::istreambuf_iterator< _CharT, _Traits >::operator++(), and std::basic_streambuf< _Elem, _Tr >::snextc().

4.935.2.21 template<typename _CharT, typename _Traits = char_traits<_CharT>> virtual pos_type std::basic_streambuf< _CharT, _Traits >::seekoff (off_type , ios_base::seekdir , ios_base::openmode = ios_base::in | ios_base::out) [inline], [protected], [virtual], [inherited]

Alters the stream positions.

Each derived class provides its own appropriate behavior.

Note

Base class version does nothing, returns a `pos_type` that represents an invalid stream position.

Reimplemented in std::basic_filebuf< _CharT, _Traits >, std::basic_filebuf< _CharT, encoding_char_traits< _CharT > >, std::basic_filebuf< char_type, traits_type >, and std::basic_stringbuf< _CharT, _Traits, _Alloc >.

Definition at line 609 of file streambuf.

Referenced by std::basic_streambuf< _Elem, _Tr >::pubseekoff().

4.935.2.22 template<typename _CharT, typename _Traits = char_traits<_CharT>> virtual pos_type std::basic_streambuf< _CharT, _Traits >::seekpos (pos_type , ios_base::openmode = ios_base::in | ios_base::out) [inline], [protected], [virtual], [inherited]

Alters the stream positions.

Each derived class provides its own appropriate behavior.

Note

Base class version does nothing, returns a `pos_type` that represents an invalid stream position.

Reimplemented in std::basic_filebuf< _CharT, _Traits >, std::basic_filebuf< _CharT, encoding_char_traits< _CharT > >, std::basic_filebuf< char_type, traits_type >, and std::basic_stringbuf< _CharT, _Traits, _Alloc >.

Definition at line 621 of file streambuf.

Referenced by std::basic_streambuf< _Elem, _Tr >::pubseekpos().

4.935.2.23 template<typename _CharT, typename _Traits = char_traits<_CharT>> virtual basic_streambuf<char_type,_Traits>* std::basic_streambuf< _CharT, _Traits >::setbuf (char_type *, streamsize) [inline], [protected], [virtual], [inherited]

Manipulates the buffer.

Each derived class provides its own appropriate behavior. See the next-to-last paragraph of https://gcc.gnu.org/onlinedocs/libstdc++/manual/streambufs.html#io.streambuf.buffering for more on this function.

Note

Base class version does nothing, returns `this`.

Reimplemented in std::basic_filebuf< _CharT, _Traits >, std::basic_filebuf< _CharT, encoding_char_traits< _CharT > >, std::basic_filebuf< char_type, traits_type >, and std::basic_stringbuf< _CharT, _Traits, _Alloc >.

Definition at line 598 of file streambuf.

Referenced by std::basic_streambuf< _Elem, _Tr >::pubsetbuf().

4.935.2.24 template<typename _CharT, typename _Traits = char_traits<_CharT>> void std::basic_streambuf< _CharT, _Traits >::setg (char_type * __gbeg, char_type * __gnext, char_type * __gend) [inline], [protected], [inherited]

Setting the three read area pointers.

Parameters

__gbeg	A pointer.
__gnext	A pointer.
__gend	A pointer.

Postcondition

__gbeg == `eback()`, *__gnext* == `gptr()`, and *__gend* == `egptr()`

Definition at line 516 of file streambuf.

Referenced by std::basic_filebuf< char_type, traits_type >::_M_create_pback(), std::basic_filebuf< char_type, traits_type >::_M_destroy_pback(), and std::basic_filebuf< char_type, traits_type >::_M_set_buffer().

4.935.2.25 template<typename _CharT, typename _Traits = char_traits<_CharT>> void std::basic_streambuf< _CharT, _Traits >::setp (char_type * *__pbeg*, char_type * *__pend*) [inline], [protected], [inherited]

Setting the three write area pointers.

Parameters

__pbeg	A pointer.
__pend	A pointer.

Postcondition

__pbeg == `pbase()`, *__pbeg* == `pptr()`, and *__pend* == `epptr()`

Definition at line 562 of file streambuf.

Referenced by std::basic_filebuf< char_type, traits_type >::_M_set_buffer().

4.935.2.26 template<typename _CharT, typename _Traits = char_traits<_CharT>> int_type std::basic_streambuf< _CharT, _Traits >::sgetc ( ) [inline], [inherited]

Getting the next character.

Returns

The next character, or eof.

If the input read position is available, returns that character, otherwise calls and returns `underflow()`. Does not move the read position after fetching the character.

Definition at line 345 of file streambuf.

Referenced by std::basic_istream< _CharT, _Traits >::get(), std::basic_istream< _CharT, _Traits >::getline(), std::basic_istream< _CharT, _Traits >::ignore(), std::istreambuf_iterator< _CharT, _Traits >::operator++(), std::basic_istream< _CharT, _Traits >::sentry::sentry(), and std::basic_streambuf< _Elem, _Tr >::snextc().

4.935.2.27 template<typename _CharT, typename _Traits = char_traits<_CharT>> streamsize std::basic_streambuf< _CharT, _Traits >::sgetn (char_type * *__s*, streamsize *__n*) [inline], [inherited]

Entry point for xsgetn.

Parameters

__s	A buffer area.
__n	A count.

Returns xsgetn(__s,__n). The effect is to fill *__s*[0] through *__s*[__n-1] with characters from the input sequence, if possible.

Definition at line 364 of file streambuf.

4.935.2.28 template<typename _CharT, typename _Traits = char_traits<_CharT>> virtual streamsize std::basic_streambuf< _CharT, _Traits >::showmanyc ( ) [inline], [protected], [virtual], [inherited]

Investigating the data available.

Returns

An estimate of the number of characters available in the input sequence, or -1.

If it returns a positive value, then successive calls to `underflow()` *will not return* `traits::eof()` *until at least that number of characters have been supplied. If* `showmanyc()` *returns -1, then calls to* `underflow()` *or* `uflow()` *will fail.* [27.5.2.4.3]/1

Note

Base class version does nothing, returns zero.
The standard adds that *the intention is not only that the calls [to underflow or uflow] will not return* `eof()` *but that they will return immediately.*
The standard adds that *the morphemes of* `showmanyc` *are* ***es-how-many-see****, not* ***show-manic****.*

Reimplemented in std::basic_filebuf< _CharT, _Traits >, std::basic_filebuf< _CharT, encoding_char_traits< _CharT > >, std::basic_filebuf< char_type, traits_type >, and std::basic_stringbuf< _CharT, _Traits, _Alloc >.

Definition at line 656 of file streambuf.

Referenced by std::basic_streambuf< _Elem, _Tr >::in_avail().

4.935.2.29 template<typename _CharT, typename _Traits = char_traits<_CharT>> int_type std::basic_streambuf< _CharT, _Traits >::snextc ( ) [inline], [inherited]

Getting the next character.

Returns

The next character, or eof.

Calls `sbumpc()`, and if that function returns `traits::eof()`, so does this function. Otherwise, `sgetc()`.

Definition at line 305 of file streambuf.

Referenced by std::basic_istream< _CharT, _Traits >::get(), std::basic_istream< _CharT, _Traits >::getline(), std::basic_istream< _CharT, _Traits >::ignore(), and std::basic_istream< _CharT, _Traits >::sentry::sentry().

4.935.2.30 template<typename _CharT, typename _Traits = char_traits<_CharT>> int_type std::basic_streambuf< _CharT, _Traits >::sputbackc (char_type *__c*) [inline], [inherited]

Pushing characters back into the input stream.

Parameters

__c	The character to push back.

Returns

The previous character, if possible.

Similar to sungetc(), but *__c* is pushed onto the stream instead of *the previous character.* If successful, the next character fetched from the input stream will be *__c*.

Definition at line 379 of file streambuf.

Referenced by std::basic_istream< _CharT, _Traits >::putback().

4.935.2.31 template<typename _CharT, typename _Traits = char_traits<_CharT>> int_type std::basic_streambuf< _CharT, _Traits >::sputc (char_type *__c*) [inline], [inherited]

Entry point for all single-character output functions.

Parameters

__c	A character to output.

Returns

__c, if possible.

One of two public output functions.

If a write position is available for the output sequence (i.e., the buffer is not full), stores *__c* in that position, increments the position, and returns `traits::to_int_type(__c)`. If a write position is not available, returns `overflow(__c)`.

Definition at line 431 of file streambuf.

Referenced by std::basic_istream< _CharT, _Traits >::get(), and std::ostreambuf_iterator< _CharT, _Traits >::operator=().

4.935.2.32 template<typename _CharT, typename _Traits = char_traits<_CharT>> streamsize std::basic_streambuf< _CharT, _Traits >::sputn (const char_type * *__s*, streamsize *__n*) [inline], [inherited]

Entry point for all single-character output functions.

Parameters

__s	A buffer read area.
__n	A count.

One of two public output functions.

Returns xsputn(__s,__n). The effect is to write *__s*[0] through *__s*[__n-1] to the output sequence, if possible.

Definition at line 457 of file streambuf.

4.935.2.33 template<typename _CharT, typename _Traits = char_traits<_CharT>> int_type std::basic_streambuf< _CharT, _Traits >::sungetc ( ) [inline], [inherited]

Moving backwards in the input stream.

Returns

The previous character, if possible.

If a putback position is available, this function decrements the input pointer and returns that character. Otherwise, calls and returns pbackfail(). The effect is to *unget* the last character *gotten*.

Definition at line 404 of file streambuf.

Referenced by std::basic_istream< _CharT, _Traits >::unget().

4.935.2.34 template<typename _CharT , typename _Traits = std::char_traits<_CharT>> virtual int __gnu_cxx::stdio_sync_filebuf< _CharT, _Traits >::sync (void) [inline], [protected], [virtual]

Synchronizes the buffer arrays with the controlled sequences.

Returns

-1 on failure.

Each derived class provides its own appropriate behavior, including the definition of *failure*.

Note

Base class version does nothing, returns zero.

Reimplemented from std::basic_streambuf< _CharT, _Traits >.

Definition at line 190 of file stdio_sync_filebuf.h.

4.935.2.35 template<typename _CharT , typename _Traits = std::char_traits<_CharT>> virtual int_type __gnu_cxx::stdio_sync_filebuf< _CharT, _Traits >::uflow ( ) [inline], [protected], [virtual]

Fetches more data from the controlled sequence.

Returns

The first character from the *pending sequence*.

Informally, this function does the same thing as `underflow()`, and in fact is required to call that function. It also returns the new character, like `underflow()` does. However, this function also moves the read position forward by one.

Reimplemented from std::basic_streambuf< _CharT, _Traits >.

Definition at line 138 of file stdio_sync_filebuf.h.

4.935.2.36 template<typename _CharT , typename _Traits = std::char_traits<_CharT>> virtual int_type __gnu_cxx::stdio_sync_filebuf< _CharT, _Traits >::underflow ( ) [inline], [protected], [virtual]

Fetches more data from the controlled sequence.

Returns

The first character from the *pending sequence*.

Informally, this function is called when the input buffer is exhausted (or does not exist, as buffering need not actually be done). If a buffer exists, it is *refilled*. In either case, the next available character is returned, or `traits::eof()` to indicate a null pending sequence.

For a formal definition of the pending sequence, see a good text such as Langer & Kreft, or [27.5.2.4.3]/7-14.

A functioning input streambuf can be created by overriding only this function (no buffer area will be used). For an example, see https://gcc.gnu.org/onlinedocs/libstdc++/manual/streambufs.html

Note

Base class version does nothing, returns eof().

Reimplemented from std::basic_streambuf< _CharT, _Traits >.

Definition at line 131 of file stdio_sync_filebuf.h.

4.935.2.37 template<typename _CharT , typename _Traits > streamsize std::basic_streambuf< _CharT, _Traits >::xsgetn (char_type * __s, streamsize __n) [protected], [virtual], [inherited]

Multiple character extraction.

Parameters

__s	A buffer area.
__n	Maximum number of characters to assign.

Returns

The number of characters assigned.

Fills *__s*[0] through *__s*[__n-1] with characters from the input sequence, as if by `sbumpc()`. Stops when either *__n* characters have been copied, or when `traits::eof()` would be copied.

It is expected that derived classes provide a more efficient implementation by overriding this definition.

Reimplemented in std::basic_filebuf< _CharT, _Traits >, std::basic_filebuf< _CharT, encoding_char_traits< _CharT > >, and std::basic_filebuf< char_type, traits_type >.

Definition at line 46 of file streambuf.tcc.

References std::min().

Referenced by std::basic_streambuf< _Elem, _Tr >::sgetn().

4.935.2.38 template<typename _CharT , typename _Traits > streamsize std::basic_streambuf< _CharT, _Traits >::xsputn (const char_type * __s, streamsize __n) [protected], [virtual], [inherited]

Multiple character insertion.

Parameters

__s	A buffer area.
__n	Maximum number of characters to write.

Returns

The number of characters written.

Writes __*s*[0] through __*s*[__n-1] to the output sequence, as if by `sputc()`. Stops when either *n* characters have been copied, or when `sputc()` would return `traits::eof()`.

It is expected that derived classes provide a more efficient implementation by overriding this definition.

Reimplemented in std::basic_filebuf< _CharT, _Traits >, std::basic_filebuf< _CharT, encoding_char_traits< _CharT > >, and std::basic_filebuf< char_type, traits_type >.

Definition at line 80 of file streambuf.tcc.

References std::min().

Referenced by std::basic_streambuf< _Elem, _Tr >::sputn().

4.942.1 Detailed Description

template<typename _RealType = double>class std::student_t_distribution< _RealType >

A student_t_distribution random number distribution.

The formula for the normal probability mass function is:

$$p(x|n) = \frac{1}{\sqrt{(n\pi)}} \frac{\Gamma((n+1)/2)}{\Gamma(n/2)} (1 + \frac{x^2}{n})^{-(n+1)/2}$$

Definition at line 3285 of file random.h.

4.942.2 Member Typedef Documentation

4.942.2.1 template<typename _RealType = double> typedef _RealType std::student_t_distribution< _RealType >::result_type

The type of the range of the distribution.

Definition at line 3288 of file random.h.

4.942.3 Member Function Documentation

4.942.3.1 template<typename _RealType = double> result_type std::student_t_distribution< _RealType >::max ( ) const [inline]

Returns the least upper bound value of the distribution.

Definition at line 3377 of file random.h.

References std::numeric_limits< _Tp >::max().

4.942.3.2 template<typename _RealType = double> result_type std::student_t_distribution< _RealType >::min ( ) const [inline]

Returns the greatest lower bound value of the distribution.

Definition at line 3370 of file random.h.

References std::numeric_limits< _Tp >::lowest().

4.942.3.3 template<typename _RealType = double> template<typename _UniformRandomNumberGenerator > result_type std::student_t_distribution< _RealType >::operator() (_UniformRandomNumberGenerator & *__urng*) [inline]

Generating functions.

Definition at line 3385 of file random.h.

References std::sqrt().

4.942.3.4 template<typename _RealType = double> param_type std::student_t_distribution< _RealType >::param ( ) const [inline]

Returns the parameter set of the distribution.

Definition at line 3355 of file random.h.

4.942.3.5 template<typename _RealType = double> void std::student_t_distribution< _RealType >::param (const param_type & *__param*) [inline]

Sets the parameter set of the distribution.

Parameters

__param	The new parameter set of the distribution.

Definition at line 3363 of file random.h.

4.942.3.6 template<typename _RealType = double> void std::student_t_distribution< _RealType >::reset ( ) [inline]

Resets the distribution state.

Definition at line 3338 of file random.h.

References std::normal_distribution< _RealType >::reset(), and std::gamma_distribution< _RealType >::reset().

4.942.4 Friends And Related Function Documentation

4.942.4.1 template<typename _RealType = double> template<typename _RealType1 , typename _CharT , typename _Traits > std::basic_ostream<_CharT, _Traits>& operator<< (std::basic_ostream< _CharT, _Traits > & __os, const std::student_t_distribution< _RealType1 > & __x) [friend]

Inserts a student_t_distribution random number distribution __x into the output stream __os.

Parameters

__os	An output stream.
__x	A student_t_distribution random number distribution.

Returns

The output stream with the state of __x inserted or in an error state.

4.942.4.2 template<typename _RealType = double> bool operator== (const std::student_t_distribution< _RealType > & *__d1*, const std::student_t_distribution< _RealType > & *__d2*) [friend]

Return true if two Student t distributions have the same parameters and the sequences that would be generated are equal.

Definition at line 3434 of file random.h.

4.942.4.3 template<typename _RealType = double> template<typename _RealType1 , typename _CharT , typename _Traits > std::basic_istream<_CharT, _Traits>& operator>> (std::basic_istream< _CharT, _Traits > & *__is*, std::student_t_distribution< _RealType1 > & *__x*) [friend]

Extracts a student_t_distribution random number distribution __x from the input stream __is.

Parameters

__is	An input stream.
__x	A student_t_distribution random number generator engine.

Returns

The input stream with __x extracted or in an error state.

4.943.1 Detailed Description

template<typename _Bilter>class std::sub_match< _Bilter >

A sequence of characters matched by a particular marked sub-expression.

An object of this class is essentially a pair of iterators marking a matched subexpression within a regular expression pattern match. Such objects can be converted to and compared with std::basic_string objects of a similar base character type as the pattern matched by the regular expression.

The iterators that make up the pair are the usual half-open interval referencing the actual original pattern matched.

Definition at line 868 of file regex.h.

4.943.2 Member Typedef Documentation

4.943.2.1 typedef _Bilter std::pair< _Bilter , _Bilter >::first_type [inherited]

The type of the `first` member.

Definition at line 214 of file stl_pair.h.

4.943.2.2 typedef _Bilter std::pair< _Bilter , _Bilter >::second_type [inherited]

The type of the `second` member.

Definition at line 215 of file stl_pair.h.

4.943.3 Member Function Documentation

4.943.3.1 template<typename _Bilter> int std::sub_match< _Bilter >::compare (const sub_match< _Bilter > & __s) const [inline]

Compares this and another matched sequence.

Parameters

__s	Another matched sequence to compare to this one.

Return values

<0	this matched sequence will collate before `__s`.
=0	this matched sequence is equivalent to `__s`.
<0	this matched sequence will collate after `__s`.

Definition at line 923 of file regex.h.

Referenced by std::sub_match< _Bilter >::operator!=(), std::sub_match< _Bilter >::operator<(), std::sub_match< _Bilter >::operator<=(), std::sub_match< _Bilter >::operator==(), std::sub_match< _Bilter >::operator>(), and std::sub_match< _Bilter >::operator>=().

4.943.3.2 template<typename _Bilter> int std::sub_match< _Bilter >::compare (const string_type & __s) const [inline]

Compares this sub_match to a string.

Parameters

__s	A string to compare to this sub_match.

Return values

<0	this matched sequence will collate before __s.
=0	this matched sequence is equivalent to __s.
<0	this matched sequence will collate after __s.

Definition at line 937 of file regex.h.

4.943.3.3 template<typename _Bilter> int std::sub_match< _Bilter >::compare (const value_type * __s) const [inline]

Compares this sub_match to a string.

Parameters

__s	A string to compare to this sub_match.

Return values

<0	this matched sequence will collate before __s.
=0	this matched sequence is equivalent to __s.
<0	this matched sequence will collate after __s.

Definition at line 941 of file regex.h.

4.943.3.4 template<typename _Bilter> difference_type std::sub_match< _Bilter >::length ( ) const [inline], [noexcept]

Gets the length of the matching sequence.

Definition at line 884 of file regex.h.

4.943.3.5 template<typename _Bilter> std::sub_match< _Bilter >::operator string_type ( ) const [inline]

Gets the matching sequence as a string.

Returns

the matching sequence as a string.

This is the implicit conversion operator. It is identical to the str() member function except that it will want to pop up in unexpected places and cause a great deal of confusion and cursing from the unwary.

Definition at line 897 of file regex.h.

4.943.3.6 template<typename _Bilter> string_type std::sub_match< _Bilter >::str ( ) const [inline]

Gets the matching sequence as a string.

Returns

the matching sequence as a string.

Definition at line 906 of file regex.h.

Referenced by std::sub_match< _Bi_iter >::operator string_type(), and std::sub_match< _Bilter >::operator<<().

4.943.3.7 constexpr void std::pair< _Bilter , _Bilter >::swap (pair< _Bilter, _Bilter > & __p) [inline], [noexcept], [inherited]

Swap the first members and then the second members.

Definition at line 439 of file stl_pair.h.

References std::pair< _T1, _T2 >::first, std::pair< _T1, _T2 >::second, and std::pair< _T1, _T2 >::swap().

4.943.4 Member Data Documentation

4.943.4.1 _Bilter std::pair< _Bilter , _Bilter >::first [inherited]

The first member.

Definition at line 217 of file stl_pair.h.

Referenced by std::sub_match< _Bi_iter >::length(), and std::sub_match< _Bi_iter >::str().

4.943.4.2 _Bilter std::pair< _Bilter , _Bilter >::second [inherited]

The second member.

Definition at line 218 of file stl_pair.h.

Referenced by std::sub_match< _Bi_iter >::length(), and std::sub_match< _Bi_iter >::str().

4.944.1 Detailed Description

template<typename _UIntType, size_t __w, size_t __s, size_t __r>class std::subtract_with_carry_engine< _UIntType, __w, __s, __r >

The Marsaglia-Zaman generator.

This is a model of a Generalized Fibonacci discrete random number generator, sometimes referred to as the SWC generator.

A discrete random number generator that produces pseudorandom numbers using:

$$x_i \leftarrow (x_{i-s} - x_{i-r} - carry_{i-1}) \bmod m$$

The size of the state is r and the maximum period of the generator is $(m^r - m^s - 1)$.

Definition at line 683 of file random.h.

4.944.2 Member Typedef Documentation

4.944.2.1 template<typename _UIntType, size_t __w, size_t __s, size_t __r> typedef _UIntType std::subtract_with_carry_engine< _UIntType, __w, __s, __r >::result_type

The type of the generated random value.

Definition at line 698 of file random.h.

4.944.3 Constructor & Destructor Documentation

4.944.3.1 template<typename _UIntType, size_t __w, size_t __s, size_t __r> std::subtract_with_carry_engine< _UIntType, __w, __s, __r >::subtract_with_carry_engine (result_type *__sd*) [inline], [explicit]

Constructs an explicitly seeded subtract_with_carry_engine random number generator.

Definition at line 714 of file random.h.

References std::subtract_with_carry_engine< _UIntType, __w, __s, __r >::seed().

4.944.3.2 template<typename _UIntType, size_t __w, size_t __s, size_t __r> template<typename _Sseq , typename = _If_seed_seq<_Sseq>> std::subtract_with_carry_engine< _UIntType, __w, __s, __r >::subtract_with_carry_engine (_Sseq & __q) [inline], [explicit]

Constructs a subtract_with_carry_engine random number engine seeded from the seed sequence __q.

Parameters

__q	the seed sequence.

Definition at line 725 of file random.h.

References std::subtract_with_carry_engine< _UIntType, __w, __s, __r >::seed().

4.944.4 Member Function Documentation

4.944.4.1 template<typename _UIntType, size_t __w, size_t __s, size_t __r> void std::subtract_with_carry_engine< _UIntType, __w, __s, __r >::discard (unsigned long long *__z*) [inline]

Discard a sequence of random numbers.

Definition at line 771 of file random.h.

4.944.4.2 template<typename _UIntType, size_t __w, size_t __s, size_t __r> static constexpr result_type std::subtract_with_carry_engine< _UIntType, __w, __s, __r >::max ( ) [inline], [static]

Gets the inclusive maximum value of the range of random integers returned by this generator.

Definition at line 764 of file random.h.

4.944.4.3 template<typename _UIntType, size_t __w, size_t __s, size_t __r> static constexpr result_type std::subtract_with_carry_engine< _UIntType, __w, __s, __r >::min ( ) [inline], [static]

Gets the inclusive minimum value of the range of random integers returned by this generator.

Definition at line 756 of file random.h.

4.944.4.4 template<typename _UIntType , size_t __w, size_t __s, size_t __r> subtract_with_carry_engine< _UIntType, __w, __s, __r >::result_type std::subtract_with_carry_engine< _UIntType, __w, __s, __r >::operator() ( )

Gets the next random number in the sequence.

Definition at line 594 of file bits/random.tcc.

4.944.4.5 template<typename _UIntType , size_t __w, size_t __s, size_t __r> void std::subtract_with_carry_engine< _UIntType, __w, __s, __r >::seed (result_type *__sd* = default_seed)

Seeds the initial state x_0 of the random number generator.

N1688[4.19] modifies this as follows. If __value == 0, sets value to 19780503. In any case, with a linear congruential generator lcg(i) having parameters $m_{lcg} = 2147483563, a_{lcg} = 40014, c_{lcg} = 0, and lcg(0) = value$, sets $x_{-r} \ldots x_{-1}$ to $lcg(1) \bmod m \ldots lcg(r) \bmod m$ respectively. If $x_{-1} = 0$ set carry to 1, otherwise sets carry to 0.

Definition at line 538 of file bits/random.tcc.

Referenced by std::subtract_with_carry_engine< _UIntType, __w, __s, __r >::subtract_with_carry_engine().

4.944.4.6 template<typename _UIntType, size_t __w, size_t __s, size_t __r> template<typename _Sseq > _If_seed_seq<_Sseq> std::subtract_with_carry_engine< _UIntType, __w, __s, __r >::seed (_Sseq & *__q*)

Seeds the initial state x_0 of the % subtract_with_carry_engine random number generator.

4.944.5 Friends And Related Function Documentation

4.944.5.1 template<typename _UIntType, size_t __w, size_t __s, size_t __r> template<typename _UIntType1 , size_t __w1, size_t __s1, size_t __r1, typename _CharT , typename _Traits > std::basic_ostream<_CharT, _Traits>& operator<< (std::basic_ostream< _CharT, _Traits > & *__os,* const std::subtract_with_carry_engine< _UIntType1, __w1, __s1, __r1 > & *__x*) [friend]

Inserts the current state of a % subtract_with_carry_engine random number generator engine __x into the output stream __os.

Parameters

__os	An output stream.
__x	A % subtract_with_carry_engine random number generator engine.

Returns

The output stream with the state of `__x` inserted or in an error state.

4.944.5.2 template<typename _UIntType, size_t __w, size_t __s, size_t __r> bool operator== (const subtract_with_carry_engine< _UIntType, __w, __s, __r > & *__lhs,* const subtract_with_carry_engine< _UIntType, __w, __s, __r > & *__rhs*) [friend]

Compares two % subtract_with_carry_engine random number generator objects of the same type for equality.

Parameters

__lhs	A % subtract_with_carry_engine random number generator object.
__rhs	Another % subtract_with_carry_engine random number generator object.

Returns

true if the infinite sequences of generated values would be equal, false otherwise.

Definition at line 796 of file random.h.

4.944.5.3 template<typename _UIntType, size_t __w, size_t __s, size_t __r> template<typename _UIntType1 , size_t __w1, size_t __s1, size_t __r1, typename _CharT , typename _Traits > std::basic_istream<_CharT, _Traits>& operator>> (std::basic_istream< _CharT, _Traits > & *__is,* std::subtract_with_carry_engine< _UIntType1, __w1, __s1, __r1 > & *__x*) [friend]

Extracts the current state of a % subtract_with_carry_engine random number generator engine `__x` from the input stream `__is`.

Parameters

__is	An input stream.
__x	A % subtract_with_carry_engine random number generator engine.

Returns

The input stream with the state of `__x` extracted or in an error state.

The documentation for this class was generated from the following files:

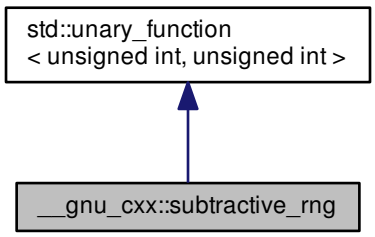
4.945 __gnu_cxx::subtractive_rng Class Reference

Inheritance diagram for __gnu_cxx::subtractive_rng:



Public Types

- typedef unsigned int argument_type
- typedef unsigned int result_type

Public Member Functions

- subtractive_rng (unsigned int __seed)
- subtractive_rng ()
- void **_M_initialize** (unsigned int __seed)
- unsigned int operator() (unsigned int __limit)

4.945.1 Detailed Description

The `subtractive_rng` class is documented on `SGI's site`. Note that this code assumes that `int` is 32 bits.

Definition at line 344 of file ext/functional.

4.945.2 Member Typedef Documentation

4.945.2.1 typedef unsigned int std::unary_function< unsigned int , unsigned int >::argument_type [inherited]

`argument_type` is the type of the argument

Definition at line 108 of file stl_function.h.

4.945.2.2 typedef unsigned int std::unary_function< unsigned int , unsigned int >::result_type [inherited]

`result_type` is the return type

Definition at line 111 of file stl_function.h.

4.945.3 Constructor & Destructor Documentation

4.945.3.1 __gnu_cxx::subtractive_rng::subtractive_rng (unsigned int *__seed*) [inline]

Ctor allowing you to initialize the seed.

Definition at line 386 of file ext/functional.

4.945.3.2 __gnu_cxx::subtractive_rng::subtractive_rng ( ) [inline]

Default ctor; initializes its state with some number you don't see.

Definition at line 390 of file ext/functional.

4.945.4 Member Function Documentation

4.945.4.1 unsigned int __gnu_cxx::subtractive_rng::operator() (unsigned int *__limit*) [inline]

Returns a number less than the argument.

Definition at line 355 of file ext/functional.

The documentation for this class was generated from the following file:

- ext/functional

- **system_error** (int __v, const error_category &__ecat, const string &__what)
- **system_error** (const system_error &)=default
- const error_code & **code** () const noexcept
- system_error & **operator=** (const system_error &)=default
- virtual const char * what () const noexcept

4.948.1 Detailed Description

An exception type that includes an `error_code` value.

Typically used to report errors from the operating system and other low-level APIs.

Definition at line 428 of file system_error.

4.948.2 Member Function Documentation

4.948.2.1 virtual const char* std::runtime_error::what ( ) const [virtual], [noexcept], [inherited]

Returns a C-style character string describing the general cause of the current error (the same string passed to the ctor).

Reimplemented from std::exception.

The documentation for this class was generated from the following file:

- system_error

4.949 __gnu_cxx::temporary_buffer< _ForwardIterator, _Tp > Struct Template Reference

Inheritance diagram for __gnu_cxx::temporary_buffer< _ForwardIterator, _Tp >:

4.949.1 Detailed Description

template<class _ForwardIterator, class _Tp = typename std::iterator_traits<_ForwardIterator>::value_type>struct __gnu_cxx::temporary_buffer< _ForwardIterator, _Tp >

This class provides similar behavior and semantics of the standard functions get_temporary_buffer() and return_temporary_buffer(), but encapsulated in a type vaguely resembling a standard container.

By default, a temporary_buffer<Iter> stores space for objects of whatever type the Iter iterator points to. It is constructed from a typical [first,last) range, and provides the begin(), end(), size() functions, as well as requested_size(). For non-trivial types, copies of *first will be used to initialize the storage.

`malloc` is used to obtain underlying storage.

Like get_temporary_buffer(), not all the requested memory may be available. Ideally, the created buffer will be large enough to hold a copy of [first,last), but if size() is less than requested_size(), then this didn't happen.

Definition at line 184 of file ext/memory.

4.949.2 Constructor & Destructor Documentation

4.949.2.1 template<class _ForwardIterator , class _Tp = typename std::iterator_traits<_ForwardIterator>::value_type> __gnu_cxx::temporary_buffer< _ForwardIterator, _Tp >::temporary_buffer (_ForwardIterator *__first*, _ForwardIterator *__last*) [inline]

Requests storage large enough to hold a copy of [first,last).

Definition at line 187 of file ext/memory.

4.949.2.2 template<class _ForwardIterator , class _Tp = typename std::iterator_traits<_ForwardIterator>::value_type> __gnu_cxx::temporary_buffer< _ForwardIterator, _Tp >::~temporary_buffer ( ) [inline]

Destroys objects and frees storage.

Definition at line 193 of file ext/memory.

4.949.3 Member Function Documentation

4.949.3.1 template<typename _ForwardIterator , typename _Tp > iterator std::_Temporary_buffer< _ForwardIterator, _Tp >::begin ( ) [inline], [inherited]

As per Table mumble.

Definition at line 165 of file stl_tempbuf.h.

4.949.3.2 template<typename _ForwardIterator , typename _Tp > iterator std::_Temporary_buffer< _ForwardIterator, _Tp >::end ( ) [inline], [inherited]

As per Table mumble.

Definition at line 170 of file stl_tempbuf.h.

4.949.3.3 template<typename _ForwardIterator , typename _Tp > size_type std::_Temporary_buffer< _ForwardIterator, _Tp >::requested_size ( ) const [inline], [inherited]

Returns the size requested by the constructor; may be >size().

Definition at line 160 of file stl_tempbuf.h.

4.949.3.4 template<typename _ForwardIterator , typename _Tp > size_type std::_Temporary_buffer< _ForwardIterator, _Tp >::size ( ) const [inline], [inherited]

As per Table mumble.

Definition at line 155 of file stl_tempbuf.h.

4.960.1 Detailed Description

template<typename _CharT, typename _InIter>class std::time_get< _CharT, _InIter >

Primary class template time_get.

This facet encapsulates the code to parse and return a date or time from a string. It is used by the istream numeric extraction operators.

The time_get template uses protected virtual functions to provide the actual results. The public accessors forward the call to the virtual functions. These virtual functions are hooks for developers to implement the behavior they require from the time_get facet.

Definition at line 368 of file locale_facets_nonio.h.

4.960.2 Member Typedef Documentation

4.960.3 Constructor & Destructor Documentation

4.960.3.1 template<typename _CharT , typename _InIter > std::time_get< _CharT, _InIter >::time_get (size_t __refs = 0) [inline], [explicit]

Constructor performs initialization.

This is the constructor provided by the standard.

Parameters

__refs	Passed to the base facet class.

Definition at line 389 of file locale_facets_nonio.h.

4.960.3.2 template<typename _CharT , typename _InIter > virtual std::time_get< _CharT, _InIter >::~time_get ( ) [inline], [protected], [virtual]

Destructor.

Definition at line 593 of file locale_facets_nonio.h.

4.960.4 Member Function Documentation

4.960.4.1 template<typename _CharT , typename _InIter > dateorder std::time_get< _CharT, _InIter >::date_order ( ) const [inline]

Return preferred order of month, day, and year.

This function returns an enum from time_base::dateorder giving the preferred ordering if the format *x* given to time_put::put() only uses month, day, and year. If the format *x* for the associated locale uses other fields, this function returns time_base::dateorder::noorder.

NOTE: The library always returns noorder at the moment.

Returns

A member of time_base::dateorder.

Definition at line 406 of file locale_facets_nonio.h.

References std::time_get< _CharT, _InIter >::do_date_order().

4.960.4.2 template<typename _CharT , typename _InIter > _GLIBCXX_END_NAMESPACE_LDBL_OR_CXX11 time_base::dateorder std::time_get< _CharT, _InIter >::do_date_order ( ) const [protected], [virtual]

Return preferred order of month, day, and year.

This function returns an enum from time_base::dateorder giving the preferred ordering if the format *x* given to time_put-::put() only uses month, day, and year. This function is a hook for derived classes to change the value returned.

Returns

A member of time_base::dateorder.

Definition at line 627 of file locale_facets_nonio.tcc.

Referenced by std::time_get< _CharT, _InIter >::date_order().

Returns

Iterator to first char not parsed.

Definition at line 559 of file locale_facets_nonio.h.

References std::time_get< _CharT, _InIter >::do_get().

4.960.4.10 template<typename _CharT , typename _InIter > _InIter std::time_get< _CharT, _InIter >::get (iter_type *__s*, iter_type *__end*, ios_base & *__io*, ios_base::iostate & *__err*, tm * *__tm*, const char_type * *__fmt*, const char_type * *__fmtend*) const [inline]

Parse input string according to format.

This function parses the input string according to a provided format string. It does the inverse of time_put::put. The format string follows the format specified for strftime(3)/strptime(3). The actual parsing is done by time_get::do_get.

Parameters

__s	Start of string to parse.
__end	End of string to parse.
__io	Source of the locale.
__err	Error flags to set.
__tm	Pointer to struct tm to fill in.
__fmt	Start of the format string.
__fmtend	End of the format string.

Returns

Iterator to first char not parsed.

Definition at line 1169 of file locale_facets_nonio.tcc.

References std::ios_base::_M_getloc(), std::ios_base::eofbit, std::ios_base::failbit, std::ios_base::goodbit, std::__ctype_abstract_base< _CharT >::is(), std::__ctype_abstract_base< _CharT >::narrow(), std::__ctype_abstract_base< _CharT >::tolower(), and std::__ctype_abstract_base< _CharT >::toupper().

4.960.4.11 template<typename _CharT , typename _InIter > iter_type std::time_get< _CharT, _InIter >::get_date (iter_type *__beg,* iter_type *__end,* ios_base & *__io,* ios_base::iostate & *__err,* tm * *__tm*) const [inline]

Parse input date string.

This function parses a date according to the format *x* and puts the results into a user-supplied struct tm. The result is returned by calling time_get::do_get_date().

If there is a valid date string according to format *x*, *tm* will be filled in accordingly and the returned iterator will point to the first character beyond the date string. If an error occurs before the end, err |= ios_base::failbit. If parsing reads all the characters, err |= ios_base::eofbit.

Parameters

__beg	Start of string to parse.
__end	End of string to parse.
__io	Source of the locale.
__err	Error flags to set.
__tm	Pointer to struct tm to fill in.

Returns

Iterator to first char beyond date string.

Definition at line 455 of file locale_facets_nonio.h.

References std::time_get< _CharT, _InIter >::do_get_date().

4.960.4.12 template<typename _CharT , typename _InIter > iter_type std::time_get< _CharT, _InIter >::get_monthname (iter_type *__beg,* iter_type *__end,* ios_base & *__io,* ios_base::iostate & *__err,* tm * *__tm*) const [inline]

Parse input month string.

This function parses a month name and puts the results into a user-supplied struct tm. The result is returned by calling time_get::do_get_monthname().

Parsing starts by parsing an abbreviated month name. If a valid abbreviation is followed by a character that would lead to the full month name, parsing continues until the full name is found or an error occurs. Otherwise parsing finishes at the end of the abbreviated name.

If an error occurs before the end, err |= ios_base::failbit. If parsing reads all the characters, err |= ios_base::eofbit.

Parameters

__beg	Start of string to parse.
__end	End of string to parse.
__io	Source of the locale.
__err	Error flags to set.
__tm	Pointer to struct tm to fill in.

Returns

Iterator to first char beyond month name.

Definition at line 512 of file locale_facets_nonio.h.

References std::time_get< _CharT, _InIter >::do_get_monthname().

4.960.4.13 template<typename _CharT , typename _InIter > iter_type std::time_get< _CharT, _InIter >::get_time (iter_type *__beg,* iter_type *__end,* ios_base & *__io,* ios_base::iostate & *__err,* tm * *__tm*) const [inline]

Parse input time string.

This function parses a time according to the format *X* and puts the results into a user-supplied struct tm. The result is returned by calling time_get::do_get_time().

If there is a valid time string according to format *X*, *tm* will be filled in accordingly and the returned iterator will point to the first character beyond the time string. If an error occurs before the end, err |= ios_base::failbit. If parsing reads all the characters, err |= ios_base::eofbit.

Parameters

__beg	Start of string to parse.
__end	End of string to parse.
__io	Source of the locale.
__err	Error flags to set.
__tm	Pointer to struct tm to fill in.

Returns

Iterator to first char beyond time string.

Definition at line 430 of file locale_facets_nonio.h.

References std::time_get< _CharT, _InIter >::do_get_time().

4.960.4.14 template<typename _CharT , typename _InIter > iter_type std::time_get< _CharT, _InIter >::get_weekday (iter_type *__beg,* iter_type *__end,* ios_base & *__io,* ios_base::iostate & *__err,* tm * *__tm*) const [inline]

Parse input weekday string.

This function parses a weekday name and puts the results into a user-supplied struct tm. The result is returned by calling time_get::do_get_weekday().

Parsing starts by parsing an abbreviated weekday name. If a valid abbreviation is followed by a character that would lead to the full weekday name, parsing continues until the full name is found or an error occurs. Otherwise parsing finishes at the end of the abbreviated name.

If an error occurs before the end, err |= ios_base::failbit. If parsing reads all the characters, err |= ios_base::eofbit.

Parameters

__beg	Start of string to parse.
__end	End of string to parse.
__io	Source of the locale.
__err	Error flags to set.
__tm	Pointer to struct tm to fill in.

Returns

Iterator to first char beyond weekday name.

Definition at line 483 of file locale_facets_nonio.h.

References std::time_get< _CharT, _InIter >::do_get_weekday().

4.960.4.15 template<typename _CharT , typename _InIter > iter_type std::time_get< _CharT, _InIter >::get_year (iter_type *__beg,* iter_type *__end,* ios_base & *__io,* ios_base::iostate & *__err,* tm * *__tm*) const [inline]

Parse input year string.

This function reads up to 4 characters to parse a year string and puts the results into a user-supplied struct tm. The result is returned by calling time_get::do_get_year().

4 consecutive digits are interpreted as a full year. If there are exactly 2 consecutive digits, the library interprets this as the number of years since 1900.

If an error occurs before the end, err |= ios_base::failbit. If parsing reads all the characters, err |= ios_base::eofbit.

Parameters

__beg	Start of string to parse.
__end	End of string to parse.
__io	Source of the locale.
__err	Error flags to set.
__tm	Pointer to struct tm to fill in.

Returns

Iterator to first char beyond year.

Definition at line 538 of file locale_facets_nonio.h.

References std::time_get< _CharT, _InIter >::do_get_year().

4.961.1 Detailed Description

template<typename _CharT, typename _InIter>class std::time_get_byname< _CharT, _InIter >

class time_get_byname [22.2.5.2].

Definition at line 760 of file locale_facets_nonio.h.

4.961.2 Member Function Documentation

4.961.2.1 template<typename _CharT , typename _InIter > dateorder std::time_get< _CharT, _InIter >::date_order ( ) const [inline], [inherited]

Return preferred order of month, day, and year.

This function returns an enum from time_base::dateorder giving the preferred ordering if the format *x* given to time_put-::put() only uses month, day, and year. If the format *x* for the associated locale uses other fields, this function returns time_base::dateorder::noorder.

NOTE: The library always returns noorder at the moment.

Returns

A member of time_base::dateorder.

Definition at line 406 of file locale_facets_nonio.h.

References std::time_get< _CharT, _InIter >::do_date_order().

4.961.2.2 template<typename _CharT , typename _InIter > _GLIBCXX_END_NAMESPACE_LDBL_OR_CXX11 time_base::dateorder std::time_get< _CharT, _InIter >::do_date_order ( ) const [protected], [virtual], [inherited]

Return preferred order of month, day, and year.

This function returns an enum from time_base::dateorder giving the preferred ordering if the format *x* given to time_put-::put() only uses month, day, and year. This function is a hook for derived classes to change the value returned.

Returns

A member of time_base::dateorder.

Definition at line 627 of file locale_facets_nonio.tcc.

Referenced by std::time_get< _CharT, _InIter >::date_order().

4.961.2.3 template<typename _CharT , typename _InIter > _InIter std::time_get< _CharT, _InIter >::do_get (iter_type *__s,* iter_type *__end,* ios_base & *__f,* ios_base::iostate & *__err,* tm * *__tm,* char *__format,* char *__modifier*) const [inline], [protected], [inherited]

Parse input string according to format.

This function parses the string according to the provided format and optional modifier. This function is a hook for derived classes to change the value returned.

See Also

get() for more details.

Parameters

__s	Start of string to parse.
__end	End of string to parse.
__f	Source of the locale.
__err	Error flags to set.
__tm	Pointer to struct tm to fill in.
__format	Format specifier.
__modifier	Format modifier.

Returns

Iterator to first char not parsed.

Definition at line 1241 of file locale_facets_nonio.tcc.

References std::ios_base::_M_getloc(), std::ios_base::eofbit, std::ios_base::goodbit, and std::__ctype_abstract_base< _CharT >::widen().

Referenced by std::time_get< _CharT, _InIter >::get().

4.961.2.4 template<typename _CharT , typename _InIter > _InIter std::time_get< _CharT, _InIter >::do_get_date (iter_type __beg, iter_type __end, ios_base & __io, ios_base::iostate & __err, tm * __tm) const [protected], [virtual], [inherited]

Parse input date string.

This function parses a date according to the format *X* and puts the results into a user-supplied struct tm. This function is a hook for derived classes to change the value returned.

See Also

get_date() for details.

Parameters

__beg	Start of string to parse.
__end	End of string to parse.
__io	Source of the locale.
__err	Error flags to set.
__tm	Pointer to struct tm to fill in.

Returns

Iterator to first char beyond date string.

Definition at line 1077 of file locale_facets_nonio.tcc.

References std::ios_base::_M_getloc(), and std::ios_base::eofbit.

Referenced by std::time_get< _CharT, _InIter >::get_date().

4.961.2.5 template<typename _CharT , typename _InIter > _InIter std::time_get< _CharT, _InIter >::do_get_monthname (iter_type __beg, iter_type __end, ios_base & __io, ios_base::iostate & __err, tm * __tm) const [protected], [virtual], [inherited]

Parse input month string.

This function parses a month name and puts the results into a user-supplied struct tm. This function is a hook for derived classes to change the value returned.

See Also

get_monthname() for details.

Parameters

__beg	Start of string to parse.
__end	End of string to parse.

__io	Source of the locale.
__err	Error flags to set.
__tm	Pointer to struct tm to fill in.

Returns

Iterator to first char beyond month name.

Definition at line 1120 of file locale_facets_nonio.tcc.

References std::ios_base::_M_getloc(), std::ios_base::eofbit, std::ios_base::failbit, and std::ios_base::goodbit.

Referenced by std::time_get< _CharT, _InIter >::get_monthname().

4.961.2.6 template<typename _CharT , typename _InIter > _InIter std::time_get< _CharT, _InIter >::do_get_time (iter_type *__beg,* iter_type *__end,* ios_base & *__io,* ios_base::iostate & *__err,* tm * *__tm*) const [protected], [virtual], [inherited]

Parse input time string.

This function parses a time according to the format *x* and puts the results into a user-supplied struct tm. This function is a hook for derived classes to change the value returned.

See Also

get_time() for details.

Parameters

__beg	Start of string to parse.
__end	End of string to parse.
__io	Source of the locale.
__err	Error flags to set.
__tm	Pointer to struct tm to fill in.

Returns

Iterator to first char beyond time string.

Definition at line 1060 of file locale_facets_nonio.tcc.

References std::ios_base::_M_getloc(), and std::ios_base::eofbit.

Referenced by std::time_get< _CharT, _InIter >::get_time().

4.961.2.7 template<typename _CharT , typename _InIter > _InIter std::time_get< _CharT, _InIter >::do_get_weekday (iter_type *__beg,* iter_type *__end,* ios_base & *__io,* ios_base::iostate & *__err,* tm * *__tm*) const [protected], [virtual], [inherited]

Parse input weekday string.

This function parses a weekday name and puts the results into a user-supplied struct tm. This function is a hook for derived classes to change the value returned.

See Also

get_weekday() for details.

Parameters

__beg	Start of string to parse.
__end	End of string to parse.
__io	Source of the locale.
__err	Error flags to set.
__tm	Pointer to struct tm to fill in.

Returns

Iterator to first char beyond weekday name.

Definition at line 1094 of file locale_facets_nonio.tcc.

References std::ios_base::_M_getloc(), std::ios_base::eofbit, std::ios_base::failbit, and std::ios_base::goodbit.

Referenced by std::time_get< _CharT, _InIter >::get_weekday().

4.961.2.8 template<typename _CharT , typename _InIter > _InIter std::time_get< _CharT, _InIter >::do_get_year (iter_type *__beg,* iter_type *__end,* ios_base & *__io,* ios_base::iostate & *__err,* tm * *__tm*) const [protected], [virtual], [inherited]

Parse input year string.

This function reads up to 4 characters to parse a year string and puts the results into a user-supplied struct tm. This function is a hook for derived classes to change the value returned.

See Also

get_year() for details.

Parameters

__beg	Start of string to parse.
__end	End of string to parse.
__io	Source of the locale.
__err	Error flags to set.
__tm	Pointer to struct tm to fill in.

Returns

Iterator to first char beyond year.

Definition at line 1146 of file locale_facets_nonio.tcc.

References std::ios_base::eofbit, std::ios_base::failbit, and std::ios_base::goodbit.

Referenced by std::time_get< _CharT, _InIter >::get_year().

4.961.2.9 template<typename _CharT , typename _InIter > iter_type std::time_get< _CharT, _InIter >::get (iter_type *__s,* iter_type *__end,* ios_base & *__io,* ios_base::iostate & *__err,* tm * *__tm,* char *__format,* char *__modifier* = 0) const [inline], [inherited]

Parse input string according to format.

This function calls time_get::do_get with the provided parameters.

See Also

do_get() and get().

Parameters

__s	Start of string to parse.
__end	End of string to parse.
__io	Source of the locale.
__err	Error flags to set.
__tm	Pointer to struct tm to fill in.
__format	Format specifier.
__modifier	Format modifier.

Returns

Iterator to first char not parsed.

Definition at line 559 of file locale_facets_nonio.h.

References std::time_get< _CharT, _InIter >::do_get().

4.961.2.10 template<typename _CharT , typename _InIter > _InIter std::time_get< _CharT, _InIter >::get (iter_type *__s*, iter_type *__end*, ios_base & *__io*, ios_base::iostate & *__err*, tm * *__tm*, const char_type * *__fmt*, const char_type * *__fmtend*) const [inline], [inherited]

Parse input string according to format.

This function parses the input string according to a provided format string. It does the inverse of time_put::put. The format string follows the format specified for strftime(3)/strptime(3). The actual parsing is done by time_get::do_get.

Parameters

__s	Start of string to parse.
__end	End of string to parse.
__io	Source of the locale.
__err	Error flags to set.
__tm	Pointer to struct tm to fill in.
__fmt	Start of the format string.
__fmtend	End of the format string.

Returns

Iterator to first char not parsed.

Definition at line 1169 of file locale_facets_nonio.tcc.

References std::ios_base::_M_getloc(), std::ios_base::eofbit, std::ios_base::failbit, std::ios_base::goodbit, std::__ctype_abstract_base< _CharT >::is(), std::__ctype_abstract_base< _CharT >::narrow(), std::__ctype_abstract_base< _CharT >::tolower(), and std::__ctype_abstract_base< _CharT >::toupper().

4.961.2.11 template<typename _CharT , typename _InIter > iter_type std::time_get< _CharT, _InIter >::get_date (iter_type *__beg*, iter_type *__end*, ios_base & *__io*, ios_base::iostate & *__err*, tm * *__tm*) const [inline], [inherited]

Parse input date string.

This function parses a date according to the format *x* and puts the results into a user-supplied struct tm. The result is returned by calling time_get::do_get_date().

If there is a valid date string according to format *x*, *tm* will be filled in accordingly and the returned iterator will point to the first character beyond the date string. If an error occurs before the end, err |= ios_base::failbit. If parsing reads all the characters, err |= ios_base::eofbit.

Parameters

__beg	Start of string to parse.
__end	End of string to parse.
__io	Source of the locale.
__err	Error flags to set.
__tm	Pointer to struct tm to fill in.

Returns

Iterator to first char beyond date string.

Definition at line 455 of file locale_facets_nonio.h.

References std::time_get< _CharT, _InIter >::do_get_date().

4.961.2.12 template<typename _CharT , typename _InIter > iter_type std::time_get< _CharT, _InIter >::get_monthname (iter_type *__beg,* iter_type *__end,* ios_base & *__io,* ios_base::iostate & *__err,* tm * *__tm*) const [inline],[inherited]

Parse input month string.

This function parses a month name and puts the results into a user-supplied struct tm. The result is returned by calling time_get::do_get_monthname().

Parsing starts by parsing an abbreviated month name. If a valid abbreviation is followed by a character that would lead to the full month name, parsing continues until the full name is found or an error occurs. Otherwise parsing finishes at the end of the abbreviated name.

If an error occurs before the end, err |= ios_base::failbit. If parsing reads all the characters, err |= ios_base::eofbit.

Parameters

__beg	Start of string to parse.
__end	End of string to parse.
__io	Source of the locale.
__err	Error flags to set.
__tm	Pointer to struct tm to fill in.

Returns

Iterator to first char beyond month name.

Definition at line 512 of file locale_facets_nonio.h.

References std::time_get< _CharT, _InIter >::do_get_monthname().

4.961.2.13 template<typename _CharT , typename _InIter > iter_type std::time_get< _CharT, _InIter >::get_time (iter_type *__beg,* iter_type *__end,* ios_base & *__io,* ios_base::iostate & *__err,* tm * *__tm*) const [inline], [inherited]

Parse input time string.

This function parses a time according to the format *X* and puts the results into a user-supplied struct tm. The result is returned by calling time_get::do_get_time().

If there is a valid time string according to format *X*, *tm* will be filled in accordingly and the returned iterator will point to the first character beyond the time string. If an error occurs before the end, err |= ios_base::failbit. If parsing reads all the characters, err |= ios_base::eofbit.

Parameters

__beg	Start of string to parse.
__end	End of string to parse.
__io	Source of the locale.
__err	Error flags to set.
__tm	Pointer to struct tm to fill in.

Returns

Iterator to first char beyond time string.

Definition at line 430 of file locale_facets_nonio.h.

References std::time_get< _CharT, _InIter >::do_get_time().

4.961.2.14 template<typename _CharT , typename _InIter > iter_type std::time_get< _CharT, _InIter >::get_weekday (iter_type *__beg,* iter_type *__end,* ios_base & *__io,* ios_base::iostate & *__err,* tm * *__tm*) const [inline], [inherited]

Parse input weekday string.

This function parses a weekday name and puts the results into a user-supplied struct tm. The result is returned by calling time_get::do_get_weekday().

Parsing starts by parsing an abbreviated weekday name. If a valid abbreviation is followed by a character that would lead to the full weekday name, parsing continues until the full name is found or an error occurs. Otherwise parsing finishes at the end of the abbreviated name.

If an error occurs before the end, err |= ios_base::failbit. If parsing reads all the characters, err |= ios_base::eofbit.

Parameters

__beg	Start of string to parse.
__end	End of string to parse.
__io	Source of the locale.
__err	Error flags to set.
__tm	Pointer to struct tm to fill in.

Returns

Iterator to first char beyond weekday name.

Definition at line 483 of file locale_facets_nonio.h.

References std::time_get< _CharT, _InIter >::do_get_weekday().

4.961.2.15 template<typename _CharT , typename _InIter > iter_type std::time_get< _CharT, _InIter >::get_year (iter_type *__beg,* iter_type *__end,* ios_base & *__io,* ios_base::iostate & *__err,* tm * *__tm*) const [inline], [inherited]

Parse input year string.

This function reads up to 4 characters to parse a year string and puts the results into a user-supplied struct tm. The result is returned by calling time_get::do_get_year().

4 consecutive digits are interpreted as a full year. If there are exactly 2 consecutive digits, the library interprets this as the number of years since 1900.

If an error occurs before the end, err |= ios_base::failbit. If parsing reads all the characters, err |= ios_base::eofbit.

Parameters

__beg	Start of string to parse.
__end	End of string to parse.
__io	Source of the locale.
__err	Error flags to set.
__tm	Pointer to struct tm to fill in.

Returns

Iterator to first char beyond year.

Definition at line 538 of file locale_facets_nonio.h.

References std::time_get< _CharT, _InIter >::do_get_year().

4.963.1 Detailed Description

template<typename _CharT, typename _OutIter>class std::time_put< _CharT, _OutIter >

Primary class template time_put.

This facet encapsulates the code to format and output dates and times according to formats used by strftime().

The time_put template uses protected virtual functions to provide the actual results. The public accessors forward the call to the virtual functions. These virtual functions are hooks for developers to implement the behavior they require from the time_put facet.

Definition at line 797 of file locale_facets_nonio.h.

4.963.2 Member Typedef Documentation

4.963.4 Member Function Documentation

4.963.4.1 template<typename _CharT , typename _OutIter > _OutIter std::time_put< _CharT, _OutIter >::do_put (iter_type __s, ios_base & __io, char_type __fill, const tm * __tm, char __format, char __mod) const [protected], [virtual]

Format and output a time or date.

This function formats the data in struct tm according to the provided format char and optional modifier. This function is a hook for derived classes to change the value returned.

See Also

put() for more details.

Parameters

__s	The stream to write to.
__io	Source of locale.
__fill	char_type to use for padding.
__tm	Struct tm with date and time info to format.
__format	Format char.
__mod	Optional modifier char.

Returns

Iterator after writing.

Definition at line 1309 of file locale_facets_nonio.tcc.

References std::ios_base::_M_getloc(), and std::__ctype_abstract_base< _CharT >::widen().

Referenced by std::time_put< _CharT, _OutIter >::put().

4.963.4.2 template<typename _CharT , typename _OutIter > _OutIter std::time_put< _CharT, _OutIter >::put (iter_type __s, ios_base & __io, char_type __fill, const tm * __tm, const _CharT * __beg, const _CharT * __end) const

Format and output a time or date.

This function formats the data in struct tm according to the provided format string. The format string is interpreted as by strftime().

Parameters

__s	The stream to write to.
__io	Source of locale.
__fill	char_type to use for padding.
__tm	Struct tm with date and time info to format.
__beg	Start of format string.
__end	End of format string.

Returns

4.973.1 Detailed Description

template<typename Node_CItr, typename Node_Itr, typename Cmp_Fn, typename _Alloc>class __gnu_pbds::tree_order_statistics_node_update< Node_CItr, Node_Itr, Cmp_Fn, _Alloc >

Functor updating ranks of entrees.

Definition at line 64 of file tree_policy.hpp.

4.973.2 Member Function Documentation

4.973.2.1 template<typename Node_CItr , typename Node_Itr , typename Cmp_Fn , typename _Alloc > tree_order_statistics_node_update< Node_CItr, Node_Itr, Cmp_Fn, _Alloc >::const_iterator __gnu_pbds::tree_order_statistics_node_update< Node_CItr, Node_Itr, Cmp_Fn, _Alloc >::find_by_order (size_type *order*) const [inline]

Finds an entry by __order. Returns a const_iterator to the entry with the __order order, or a const_iterator to the container object's end if order is at least the size of the container object.

Definition at line 74 of file tree_policy.hpp.

4.973.2.2 template<typename Node_CItr , typename Node_Itr , typename Cmp_Fn , typename _Alloc > tree_order_statistics_node_update< Node_CItr, Node_Itr, Cmp_Fn, _Alloc >::iterator __gnu_pbds::tree_order_statistics_node_update< Node_CItr, Node_Itr, Cmp_Fn, _Alloc >::find_by_order (size_type *order*) [inline]

Finds an entry by __order. Returns an iterator to the entry with the __order order, or an iterator to the container object's end if order is at least the size of the container object.

Definition at line 47 of file tree_policy.hpp.

4.973.2.3 template<typename Node_Ctr , typename Node_Itr , typename Cmp_Fn , typename _Alloc > void __gnu_pbds::tree_order_statistics_node_update< Node_Ctr, Node_Itr, Cmp_Fn, _Alloc >::operator() (node_iterator *node_it,* node_const_iterator *end_nd_it*) const [inline], [protected]

Updates the rank of a node through a node_iterator node_it; end_nd_it is the end node iterator.

Definition at line 110 of file tree_policy.hpp.

4.973.2.4 template<typename Node_Ctr , typename Node_Itr , typename Cmp_Fn , typename _Alloc > tree_order_statistics_node_update< Node_Ctr, Node_Itr, Cmp_Fn, _Alloc >::size_type __gnu_pbds::tree_order_statistics_node_update< Node_Ctr, Node_Itr, Cmp_Fn, _Alloc >::order_of_key (key_const_reference *r_key*) const [inline]

Returns the order of a key within a sequence. For exapmle, if r_key is the smallest key, this method will return 0; if r_key is a key between the smallest and next key, this method will return 1; if r_key is a key larger than the largest key, this method will return the size of r_c.

Definition at line 80 of file tree_policy.hpp.

4.982.1 Detailed Description

template<typename Key, typename Mapped, typename _ATraits = typename detail::default_trie_access_traits<Key>::type, typename Tag = pat_trie_tag, template< typename Node_CItr, typename Node_Itr, typename _ATraits_, typename _Alloc_ > class Node_Update = null_node_update, typename _Alloc = std::allocator<char>>class __gnu_pbds::trie< Key, Mapped, _ATraits, Tag, Node_Update, _Alloc >

A trie-based container.

Template Parameters

Key	Key type.
Mapped	Map type.
_ATraits	Element access traits.
Tag	Instantiating data structure type, see container_tag.
Node_Update	Updates trie internal-nodes, restores invariants when invalidated. XXX See design-::tree-based-containersnode invariants.
_Alloc	Allocator type.

Base tag choice is pat_trie_tag.

Base is basic_branch.

Definition at line 731 of file assoc_container.hpp.

4.982.2 Member Typedef Documentation

4.982.2.1 template<typename Key , typename Mapped , typename _ATraits = typename detail::default_trie_access_traits<Key>-::type, typename Tag = pat_trie_tag, template< typename Node_CItr, typename Node_Itr, typename _ATraits_, typename _Alloc_ > class Node_Update = null_node_update, typename _Alloc = std::allocator<char>> typedef _ATraits __gnu_pbds::trie< Key, Mapped, _ATraits, Tag, Node_Update, _Alloc >::access_traits

Element access traits type.

Definition at line 738 of file assoc_container.hpp.

4.982.3 Constructor & Destructor Documentation

4.982.3.1 template<typename Key , typename Mapped , typename _ATraits = typename detail::default_trie_access_traits<Key>-::type, typename Tag = pat_trie_tag, template< typename Node_CItr, typename Node_Itr, typename _ATraits_, typename _Alloc_ > class Node_Update = null_node_update, typename _Alloc = std::allocator<char>> __gnu_pbds::trie< Key, Mapped, _ATraits, Tag, Node_Update, _Alloc >::trie (const access_traits & *t*) [inline]

Constructor taking some policy objects. r_access_traits will be copied by the _ATraits object of the container object.

Definition at line 744 of file assoc_container.hpp.

4.982.3.2 template<typename Key , typename Mapped , typename _ATraits = typename detail::default_trie_access_traits<Key>-::type, typename Tag = pat_trie_tag, template< typename Node_CItr, typename Node_Itr, typename _ATraits_, typename _Alloc_ > class Node_Update = null_node_update, typename _Alloc = std::allocator<char>> template<typename It > __gnu_pbds::trie< Key, Mapped, _ATraits, Tag, Node_Update, _Alloc >::trie (It *first,* It *last*) [inline]

Constructor taking __iterators to a range of value_types. The value_types between first_it and last_it will be inserted into the container object.

Definition at line 751 of file assoc_container.hpp.

4.982.3.3 template<typename Key , typename Mapped , typename _ATraits = typename detail::default_trie_access_traits<Key>-::type, typename Tag = pat_trie_tag, template< typename Node_CItr, typename Node_Itr, typename _ATraits_, typename _Alloc_ > class Node_Update = null_node_update, typename _Alloc = std::allocator<char>> template<typename It > __gnu_pbds::trie< Key, Mapped, _ATraits, Tag, Node_Update, _Alloc >::trie (It *first,* It *last,* const access_traits & *t*) [inline]

Constructor taking __iterators to a range of value_types and some policy objects. The value_types between first_it and last_it will be inserted into the container object.

Definition at line 758 of file assoc_container.hpp.

template<typename Node_CItr, typename Node_Itr, typename _ATraits, typename _Alloc>class __gnu_pbds::trie_order_statistics_node_update< Node_CItr, Node_Itr, _ATraits, _Alloc >

Functor updating ranks of entrees.

Definition at line 253 of file trie_policy.hpp.

4.987.2 Member Function Documentation

4.987.2.1 template<typename Node_CItr , typename Node_Itr , typename _ATraits , typename _Alloc > trie_order_statistics_node_update< Node_CItr, Node_Itr, _ATraits, _Alloc >::const_iterator __gnu_pbds::trie_order_statistics_node_update< Node_CItr, Node_Itr, _ATraits, _Alloc >::find_by_order (size_type *order*) const [inline]

Finds an entry by __order. Returns a const_iterator to the entry with the __order order, or a const_iterator to the container object's end if order is at least the size of the container object.

Definition at line 81 of file trie_policy.hpp.

4.987.2.2 template<typename Node_CItr , typename Node_Itr , typename _ATraits , typename _Alloc > trie_order_statistics_node_update< Node_CItr, Node_Itr, _ATraits, _Alloc >::iterator __gnu_pbds::trie_order_statistics_node_update< Node_CItr, Node_Itr, _ATraits, _Alloc >::find_by_order (size_type *order*) [inline]

Finds an entry by __order. Returns an iterator to the entry with the __order order, or an iterator to the container object's end if order is at least the size of the container object.

Definition at line 47 of file trie_policy.hpp.

4.987.2.3 template<typename Node_CItr , typename Node_Itr , typename _ATraits , typename _Alloc > void __gnu_pbds::trie_order_statistics_node_update< Node_CItr, Node_Itr, _ATraits, _Alloc >::operator() (node_iterator *nd_it,* node_const_iterator) const [inline],[protected]

Updates the rank of a node through a node_iterator node_it; end_nd_it is the end node iterator.

Definition at line 154 of file trie_policy.hpp.

4.987.2.4 template<typename Node_CItr , typename Node_Itr , typename _ATraits , typename _Alloc > trie_order_statistics_node_update< Node_CItr, Node_Itr, _ATraits, _Alloc >::size_type __gnu_pbds::trie_order_statistics_node_update< Node_CItr, Node_Itr, _ATraits, _Alloc >::order_of_key (key_const_reference *r_key*) const [inline]

Returns the order of a key within a sequence. For exapmle, if r_key is the smallest key, this method will return 0; if r_key is a key between the smallest and next key, this method will return 1; if r_key is a key larger than the largest key, this method will return the size of r_c.

Definition at line 87 of file trie_policy.hpp.

4.987.2.5 template<typename Node_CItr , typename Node_Itr , typename _ATraits , typename _Alloc > trie_order_statistics_node_update< Node_CItr, Node_Itr, _ATraits, _Alloc >::size_type __gnu_pbds::trie_order_statistics_node_update< Node_CItr, Node_Itr, _ATraits, _Alloc >::order_of_prefix (a_const_iterator *b*, a_const_iterator *e*) const [inline]

Returns the order of a prefix within a sequence. For exapmle, if [b, e] is the smallest prefix, this method will return 0; if r_key is a key between the smallest and next key, this method will return 1; if r_key is a key larger than the largest key, this method will return the size of r_c.

Definition at line 98 of file trie_policy.hpp.

4.989.1 Detailed Description

template<typename Node_CItr, typename Node_Itr, typename _ATraits, typename _Alloc>class __gnu_pbds::trie_prefix_search_node_update< Node_CItr, Node_Itr, _ATraits, _Alloc >

A node updator that allows tries to be searched for the range of values that match a certain prefix.

Definition at line 155 of file trie_policy.hpp.

4.989.2 Member Typedef Documentation

4.989.2.1 template<typename Node_CItr, typename Node_Itr, typename _ATraits, typename _Alloc> typedef access_traits::const_iterator __gnu_pbds::trie_prefix_search_node_update< Node_CItr, Node_Itr, _ATraits, _Alloc >::a_const_iterator

Const element iterator.

Definition at line 168 of file trie_policy.hpp.

4.989.2.2 template<typename Node_CItr, typename Node_Itr, typename _ATraits, typename _Alloc> typedef _ATraits __gnu_pbds::trie_prefix_search_node_update< Node_CItr, Node_Itr, _ATraits, _Alloc >::access_traits

Element access traits.

Definition at line 165 of file trie_policy.hpp.

4.989.2.3 template<typename Node_CItr, typename Node_Itr, typename _ATraits, typename _Alloc> typedef _Alloc __gnu_pbds::trie_prefix_search_node_update< Node_CItr, Node_Itr, _ATraits, _Alloc >::allocator_type

_Alloc type.

Definition at line 171 of file trie_policy.hpp.

4.989.2.4 template<typename Node_CItr, typename Node_Itr, typename _ATraits, typename _Alloc> typedef allocator_type::size_type __gnu_pbds::trie_prefix_search_node_update< Node_CItr, Node_Itr, _ATraits, _Alloc >::size_type

Size type.

Definition at line 174 of file trie_policy.hpp.

4.989.3 Member Function Documentation

4.989.3.1 template<typename Node_CItr , typename Node_Itr , typename _ATraits , typename _Alloc > void __gnu_pbds::trie_prefix_search_node_update< Node_CItr, Node_Itr, _ATraits, _Alloc >::operator() (node_iterator *node_it,* node_const_iterator *end_nd_it*) const [inline], [protected]

Called to update a node's metadata.

Definition at line 141 of file trie_policy.hpp.

4.989.3.2 template<typename Node_CItr , typename Node_Itr , typename _ATraits , typename _Alloc > std::pair< typename trie_prefix_search_node_update< Node_CItr, Node_Itr, _ATraits, _Alloc >::const_iterator, typename trie_prefix_search_node_update< Node_CItr, Node_Itr, _ATraits, _Alloc >::const_iterator > __gnu_pbds::trie_prefix_search_node_update< Node_CItr, Node_Itr, _ATraits, _Alloc >::prefix_range (key_const_reference *r_key*) const

Finds the const iterator range corresponding to all values whose prefixes match r_key.

Definition at line 49 of file trie_policy.hpp.

4.989.3.3 template<typename Node_Ctr , typename Node_Itr , typename _ATraits , typename _Alloc > std::pair< typename trie_prefix_search_node_update< Node_Ctr, Node_Itr, _ATraits, _Alloc >::iterator, typename trie_prefix_search_node_update< Node_Ctr, Node_Itr, _ATraits, _Alloc >::iterator > __gnu_pbds::trie_prefix_search_node_update< Node_Ctr, Node_Itr, _ATraits, _Alloc >::prefix_range (key_const_reference *r_key*)

Finds the iterator range corresponding to all values whose prefixes match r_key.

Definition at line 60 of file trie_policy.hpp.

4.989.3.4 template<typename Node_Ctr , typename Node_Itr , typename _ATraits , typename _Alloc > std::pair< typename trie_prefix_search_node_update< Node_Ctr, Node_Itr, _ATraits, _Alloc >::const_iterator, typename trie_prefix_search_node_update< Node_Ctr, Node_Itr, _ATraits, _Alloc >::const_iterator > __gnu_pbds::trie_prefix_search_node_update< Node_Ctr, Node_Itr, _ATraits, _Alloc >::prefix_range (a_const_iterator *b,* a_const_iterator *e*) const

Finds the const iterator range corresponding to all values whose prefixes match [b, e).

Definition at line 71 of file trie_policy.hpp.

4.989.3.5 template<typename Node_Ctr , typename Node_Itr , typename _ATraits , typename _Alloc > std::pair< typename trie_prefix_search_node_update< Node_Ctr, Node_Itr, _ATraits, _Alloc >::iterator, typename trie_prefix_search_node_update< Node_Ctr, Node_Itr, _ATraits, _Alloc >::iterator > __gnu_pbds::trie_prefix_search_node_update< Node_Ctr, Node_Itr, _ATraits, _Alloc >::prefix_range (a_const_iterator *b,* a_const_iterator *e*)

Finds the iterator range corresponding to all values whose prefixes match [b, e).

Definition at line 86 of file trie_policy.hpp.

The documentation for this class was generated from the following file:

- trie_policy.hpp

4.990.1 Detailed Description

template<typename String = std::string, typename String::value_type Min_E_Val = detail::__numeric_traits<typename String::value_type>::__min, typename String::value_type Max_E_Val = detail::__numeric_traits<typename String::value_type>::__max, bool Reverse = false, typename _Alloc = std::allocator<char>>struct __gnu_pbds::trie_string_access_traits< String, Min_E_Val, Max_E_Val, Reverse, _Alloc >

Element access traits for string types.

Template Parameters

String	String type.
Min_E_Val	Minimal element value.
Max_E_Val	Maximum element value.
Reverse	Reverse iteration should be used. Default: false.
_Alloc	Allocator type.

Definition at line 74 of file trie_policy.hpp.

4.990.2 Member Typedef Documentation

4.990.2.1 template<typename String = std::string, typename String::value_type Min_E_Val = detail::__numeric_traits<typename String::value_type>::__min, typename String::value_type Max_E_Val = detail::__numeric_traits<typename String::value_type>::__max, bool Reverse = false, typename _Alloc = std::allocator<char>> typedef detail::__conditional_type<Reverse, typename String::const_reverse_iterator, typename String::const_iterator>::__type __gnu_pbds::trie_string_access_traits< String, Min_E_Val, Max_E_Val, Reverse, _Alloc >::const_iterator

Element const iterator type.

Definition at line 90 of file trie_policy.hpp.

4.990.2.2 template<typename String = std::string, typename String::value_type Min_E_Val = detail::__numeric_traits<typename String::value_type>::__min, typename String::value_type Max_E_Val = detail::__numeric_traits<typename String::value_type>::__max, bool Reverse = false, typename _Alloc = std::allocator<char>> typedef std::iterator_traits<const_iterator>::value_type __gnu_pbds::trie_string_access_traits< String, Min_E_Val, Max_E_Val, Reverse, _Alloc >::e_type

Element type.

Definition at line 93 of file trie_policy.hpp.

4.990.3 Member Function Documentation

4.990.3.1 template<typename String , typename String::value_type Min_E_Val, typename String::value_type Max_E_Val, bool Reverse, typename _Alloc > trie_string_access_traits< String, Min_E_Val, Max_E_Val, Reverse, _Alloc >::const_iterator __gnu_pbds::trie_string_access_traits< String, Min_E_Val, Max_E_Val, Reverse, _Alloc >::begin (key_const_reference *r_key*) [inline], [static]

Returns a const_iterator to the first element of key_const_reference agumnet.

Definition at line 59 of file trie_policy.hpp.

4.990.3.2 template<typename String , typename String::value_type Min_E_Val, typename String::value_type Max_E_Val, bool Reverse, typename _Alloc > trie_string_access_traits< String, Min_E_Val, Max_E_Val, Reverse, _Alloc >::size_type __gnu_pbds::trie_string_access_traits< String, Min_E_Val, Max_E_Val, Reverse, _Alloc >::e_pos (e_type *e*) [inline], [static]

Maps an element to a position.

Definition at line 51 of file trie_policy.hpp.

4.990.3.3 template<typename String , typename String::value_type Min_E_Val, typename String::value_type Max_E_Val, bool Reverse, typename _Alloc > trie_string_access_traits< String, Min_E_Val, Max_E_Val, Reverse, _Alloc >::const_iterator __gnu_pbds::trie_string_access_traits< String, Min_E_Val, Max_E_Val, Reverse, _Alloc >::end (key_const_reference *r_key*) [inline], [static]

Returns a const_iterator to the after-last element of key_const_reference argument.

Definition at line 67 of file trie_policy.hpp.

4.998.1 Detailed Description

template<typename _T1, typename _T2>class std::tuple< _T1, _T2 >

Partial specialization, 2-element tuple. Includes construction and assignment from a pair.

Definition at line 887 of file tuple.

The documentation for this class was generated from the following file:

- tuple

4.999 std::tuple_element< _Int, _Tp > Struct Template Reference

4.999.1 Detailed Description

template<std::size_t _Int, typename _Tp>struct std::tuple_element< _Int, _Tp >

tuple_element

Gives the type of the ith element of a given tuple type.

Definition at line 428 of file array.

The documentation for this struct was generated from the following file:

- array

4.1000 std::tuple_element< 0, std::pair< _Tp1, _Tp2 > > Struct Template Reference

Public Types

- typedef _Tp1 **type**

4.1000.1 Detailed Description

template<class _Tp1, class _Tp2>struct std::tuple_element< 0, std::pair< _Tp1, _Tp2 > >

Partial specialization for std::pair.

Definition at line 162 of file utility.

The documentation for this struct was generated from the following file:

- utility

4.1001 std::tuple_element< 0, tuple< _Head, _Tail...> > Struct Template Reference

Public Types

- typedef _Head **type**

4.1001.1 Detailed Description

template<typename _Head, typename... _Tail>struct std::tuple_element< 0, tuple< _Head, _Tail...> >

Basis case for tuple_element: The first element is the one we're seeking.

Definition at line 1266 of file tuple.

The documentation for this struct was generated from the following file:

- tuple

4.1002 std::tuple_element< 1, std::pair< _Tp1, _Tp2 > > Struct Template Reference

Public Types

- typedef _Tp2 **type**

4.1002.1 Detailed Description

template<class _Tp1, class _Tp2>struct std::tuple_element< 1, std::pair< _Tp1, _Tp2 > >

Partial specialization for std::pair.

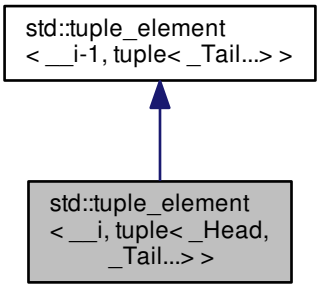
Definition at line 167 of file utility.

The documentation for this struct was generated from the following file:

- utility

4.1003 std::tuple_element< __i, tuple< _Head, _Tail...> > Struct Template Reference

Inheritance diagram for std::tuple_element< __i, tuple< _Head, _Tail...> >:



4.1003.1 Detailed Description

template<std::size_t __i, typename _Head, typename... _Tail>struct std::tuple_element< __i, tuple< _Head, _Tail...> >

Recursive case for tuple_element: strip off the first element in the tuple and retrieve the (i-1)th element of the remaining tuple.

Definition at line 1259 of file tuple.

The documentation for this struct was generated from the following file:

- tuple

4.1004 std::tuple_element< __i, tuple<> > Struct Template Reference

4.1004.1 Detailed Description

template<size_t __i>struct std::tuple_element< __i, tuple<> >

Error case for tuple_element: invalid index.

Definition at line 1275 of file tuple.

The documentation for this struct was generated from the following file:

- bool **operator==** (const type_info &__arg) const noexcept

Protected Member Functions

- **type_info** (const char *__n)

Protected Attributes

- const char * **__name**

4.1014.1 Detailed Description

Part of RTTI.

The `type_info` class describes type information generated by an implementation.

Definition at line 88 of file typeinfo.

4.1014.2 Constructor & Destructor Documentation

4.1014.2.1 virtual std::type_info::~type_info ( ) [virtual]

Destructor first. Being the first non-inline virtual function, this controls in which translation unit the vtable is emitted. The compiler makes use of that information to know where to emit the runtime-mandated type_info structures in the new-abi.

4.1014.3 Member Function Documentation

4.1014.3.1 const char* std::type_info::name ( ) const [inline], [noexcept]

Returns an *implementation-defined* byte string; this is not portable between compilers!

Definition at line 99 of file typeinfo.

The documentation for this class was generated from the following file:

- typeinfo

4.1015 __gnu_pbds::detail::types_traits< Key, Mapped, _Alloc, Store_Hash > Struct Template Reference

Inheritance diagram for __gnu_pbds::detail::types_traits< Key, Mapped, _Alloc, Store_Hash >:

- _Operation1::result_type **operator()** (const typename _Operation2::argument_type &__x) const

Protected Attributes

- _Operation1 **_M_fn1**
- _Operation2 **_M_fn2**

4.1016.1 Detailed Description

template<class _Operation1, class _Operation2>class __gnu_cxx::unary_compose< _Operation1, _Operation2 >

An SGI extension .

Definition at line 117 of file ext/functional.

4.1016.2 Member Typedef Documentation

4.1016.2.1 typedef _Operation2::argument_type std::unary_function< _Operation2::argument_type , _Operation1::result_type >::argument_type [inherited]

`argument_type` is the type of the argument

Definition at line 108 of file stl_function.h.

4.1016.2.2 typedef _Operation1::result_type std::unary_function< _Operation2::argument_type , _Operation1::result_type >::result_type [inherited]

`result_type` is the return type

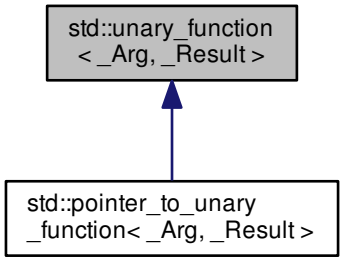
Definition at line 111 of file stl_function.h.

The documentation for this class was generated from the following file:

- ext/functional

4.1017 std::unary_function< _Arg, _Result > Struct Template Reference

Inheritance diagram for std::unary_function< _Arg, _Result >:



Public Types

- typedef _Arg argument_type
- typedef _Result result_type

4.1017.1 Detailed Description

template<typename _Arg, typename _Result>struct std::unary_function< _Arg, _Result >

This is one of the functor base classes.

Definition at line 105 of file stl_function.h.

4.1017.2 Member Typedef Documentation

4.1017.2.1 template<typename _Arg, typename _Result> typedef _Arg std::unary_function< _Arg, _Result >::argument_type

`argument_type` is the type of the argument

Definition at line 108 of file stl_function.h.

4.1017.2.2 template<typename _Arg, typename _Result> typedef _Result std::unary_function< _Arg, _Result >::result_type

`result_type` is the return type

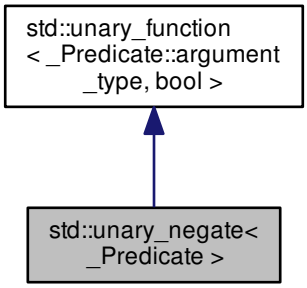
Definition at line 111 of file stl_function.h.

The documentation for this struct was generated from the following file:

- stl_function.h

4.1018 std::unary_negate< _Predicate > Class Template Reference

Inheritance diagram for std::unary_negate< _Predicate >:



Public Types

- typedef _Predicate::argument_type argument_type
- typedef bool result_type

Public Member Functions

- constexpr **unary_negate** (const _Predicate &__x)
- constexpr bool **operator()** (const typename _Predicate::argument_type &__x) const

Protected Attributes

- _Predicate **_M_pred**

4.1018.1 Detailed Description

template<typename _Predicate>class std::unary_negate< _Predicate >

One of the negation functors.

Definition at line 1003 of file stl_function.h.

4.1018.2 Member Typedef Documentation

4.1018.2.1 typedef _Predicate::argument_type std::unary_function< _Predicate::argument_type , bool >::argument_type [inherited]

`argument_type` is the type of the argument

Definition at line 108 of file stl_function.h.

4.1018.2.2 typedef bool std::unary_function< _Predicate::argument_type , bool >::result_type [inherited]

`result_type` is the return type

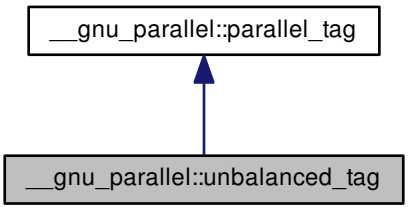
Definition at line 111 of file stl_function.h.

The documentation for this class was generated from the following file:

- stl_function.h

4.1019 __gnu_parallel::unbalanced_tag Struct Reference

Inheritance diagram for __gnu_parallel::unbalanced_tag:



Public Member Functions

- _ThreadIndex __get_num_threads ()
- void set_num_threads (_ThreadIndex __num_threads)

4.1019.1 Detailed Description

Recommends parallel execution using static load-balancing at compile time.

Definition at line 92 of file tags.h.

4.1019.2 Member Function Documentation

4.1019.2.1 _ThreadIndex __gnu_parallel::parallel_tag::__get_num_threads ( ) [inline],[inherited]

Find out desired number of threads.

Returns

Desired number of threads.

Definition at line 63 of file tags.h.

Referenced by __gnu_parallel::__parallel_sort().

4.1019.2.2 void __gnu_parallel::parallel_tag::set_num_threads (_ThreadIndex *__num_threads*) [inline], [inherited]

Set the desired number of threads.

Parameters

__num_threads	Desired number of threads.

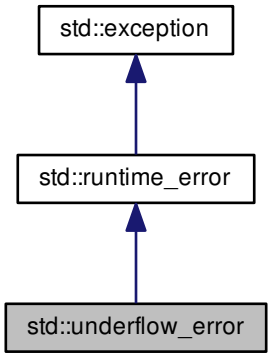
Definition at line 73 of file tags.h.

The documentation for this struct was generated from the following file:

- tags.h

4.1020 std::underflow_error Class Reference

Inheritance diagram for std::underflow_error:



Public Member Functions

- **underflow_error** (const string &__arg) _GLIBCXX_TXN_SAFE
- **underflow_error** (const char *) _GLIBCXX_TXN_SAFE
- **underflow_error** (const underflow_error &)=default
- **underflow_error** (underflow_error &&)=default
- underflow_error & **operator=** (const underflow_error &)=default
- underflow_error & **operator=** (underflow_error &&)=default
- virtual const char * what () const noexcept

4.1020.1 Detailed Description

Thrown to indicate arithmetic underflow.

Definition at line 288 of file stdexcept.

4.1020.2 Member Function Documentation

4.1020.2.1 virtual const char* std::runtime_error::what ( ) const [virtual], [noexcept], [inherited]

Returns a C-style character string describing the general cause of the current error (the same string passed to the ctor).

Reimplemented from std::exception.

The documentation for this class was generated from the following file:

- stdexcept

4.1021 std::underlying_type< _Tp > Struct Template Reference

Inherits std::__underlying_type_impl< _Tp, bool >.

Public Types

- using **type** = __underlying_type(_Tp)

4.1021.1 Detailed Description

template<typename _Tp>struct std::underlying_type< _Tp >

The underlying type of an enum.

Definition at line 2324 of file type_traits.

The documentation for this struct was generated from the following file:

- type_traits

4.1022 std::uniform_int_distribution< _IntType > Class Template Reference

Classes

- struct param_type

Public Types

- void param (const param_type &__param)
- void reset ()

Friends

- bool operator== (const uniform_int_distribution &__d1, const uniform_int_distribution &__d2)

4.1022.1 Detailed Description

template<typename _IntType = int>class std::uniform_int_distribution< _IntType >

Uniform discrete distribution for random numbers. A discrete random distribution on the range $[min, max]$ with equal probability throughout the range.

Definition at line 74 of file uniform_int_dist.h.

4.1022.2 Member Typedef Documentation

4.1022.2.1 template<typename _IntType = int> typedef _IntType std::uniform_int_distribution< _IntType >::result_type

The type of the range of the distribution.

Definition at line 77 of file uniform_int_dist.h.

4.1022.3 Constructor & Destructor Documentation

4.1022.3.1 template<typename _IntType = int> std::uniform_int_distribution< _IntType >::uniform_int_distribution ( ) [inline]

Constructs a uniform distribution object.

Definition at line 122 of file uniform_int_dist.h.

4.1022.3.2 template<typename _IntType = int> std::uniform_int_distribution< _IntType >::uniform_int_distribution (_IntType __a, _IntType __b = numeric_limits<_IntType>::max()) [inline], [explicit]

Constructs a uniform distribution object.

Definition at line 128 of file uniform_int_dist.h.

4.1022.4 Member Function Documentation

4.1022.4.1 template<typename _IntType = int> result_type std::uniform_int_distribution< _IntType >::max ( ) const [inline]

Returns the inclusive upper bound of the distribution range.

Definition at line 180 of file uniform_int_dist.h.

4.1022.4.2 template<typename _IntType = int> result_type std::uniform_int_distribution< _IntType >::min ( ) const [inline]

Returns the inclusive lower bound of the distribution range.

Definition at line 173 of file uniform_int_dist.h.

4.1022.4.3 template<typename _IntType = int> template<typename _UniformRandomNumberGenerator > result_type std::uniform_int_distribution< _IntType >::operator() (_UniformRandomNumberGenerator & *__urng*) [inline]

Generating functions.

Definition at line 188 of file uniform_int_dist.h.

4.1022.4.4 template<typename _IntType = int> param_type std::uniform_int_distribution< _IntType >::param ( ) const [inline]

Returns the parameter set of the distribution.

Definition at line 158 of file uniform_int_dist.h.

Referenced by std::operator>>().

4.1022.4.5 template<typename _IntType = int> void std::uniform_int_distribution< _IntType >::param (const param_type & *__param*) [inline]

Sets the parameter set of the distribution.

Parameters

__param	The new parameter set of the distribution.

Definition at line 166 of file uniform_int_dist.h.

4.1022.4.6 template<typename _IntType = int> void std::uniform_int_distribution< _IntType >::reset ( ) [inline]

Resets the distribution state.

Does nothing for the uniform integer distribution.

Definition at line 144 of file uniform_int_dist.h.

4.1022.5 Friends And Related Function Documentation

4.1022.5.1 template<typename _IntType = int> bool operator== (const uniform_int_distribution< _IntType > & *__d1*, const uniform_int_distribution< _IntType > & *__d2*) [friend]

Return true if two uniform integer distributions have the same parameters.

Definition at line 223 of file uniform_int_dist.h.

The documentation for this class was generated from the following file:

- uniform_int_dist.h

4.1023.1 Detailed Description

template<typename _RealType = double>class std::uniform_real_distribution< _RealType >

Uniform continuous distribution for random numbers.

A continuous random distribution on the range [min, max) with equal probability throughout the range. The URNG should be real-valued and deliver number in the range [0, 1).

Definition at line 1731 of file random.h.

4.1023.2 Member Typedef Documentation

4.1023.2.1 template<typename _RealType = double> typedef _RealType std::uniform_real_distribution< _RealType >::result_type

The type of the range of the distribution.

Definition at line 1734 of file random.h.

4.1023.3 Constructor & Destructor Documentation

4.1023.3.1 template<typename _RealType = double> std::uniform_real_distribution< _RealType >::uniform_real_distribution ( ) [inline]

Constructs a uniform_real_distribution object.

The lower bound is set to 0.0 and the upper bound to 1.0

Definition at line 1781 of file random.h.

4.1023.3.2 template<typename _RealType = double> std::uniform_real_distribution< _RealType >::uniform_real_distribution (_RealType *__a*, _RealType *__b* = _RealType(1)) [inline], [explicit]

Constructs a uniform_real_distribution object.

Parameters

__a	[IN] The lower bound of the distribution.
__b	[IN] The upper bound of the distribution.

Definition at line 1790 of file random.h.

4.1023.4 Member Function Documentation

4.1023.4.1 template<typename _RealType = double> result_type std::uniform_real_distribution< _RealType >::max ( ) const [inline]

Returns the inclusive upper bound of the distribution range.

Definition at line 1841 of file random.h.

4.1023.4.2 template<typename _RealType = double> result_type std::uniform_real_distribution< _RealType >::min ( ) const [inline]

Returns the inclusive lower bound of the distribution range.

Definition at line 1834 of file random.h.

4.1023.4.3 template<typename _RealType = double> template<typename _UniformRandomNumberGenerator > result_type std::uniform_real_distribution< _RealType >::operator() (_UniformRandomNumberGenerator & *__urng*) [inline]

Generating functions.

Definition at line 1849 of file random.h.

4.1023.4.4 template<typename _RealType = double> param_type std::uniform_real_distribution< _RealType >::param ( ) const [inline]

Returns the parameter set of the distribution.

Definition at line 1819 of file random.h.

Referenced by std::operator>>().

4.1023.4.5 template<typename _RealType = double> void std::uniform_real_distribution< _RealType >::param (const param_type & *__param*) [inline]

Sets the parameter set of the distribution.

Parameters

__param	The new parameter set of the distribution.

Definition at line 1827 of file random.h.

4.1023.4.6 template<typename _RealType = double> void std::uniform_real_distribution< _RealType >::reset ( ) [inline]

Resets the distribution state.

Does nothing for the uniform real distribution.

Definition at line 1805 of file random.h.

4.1023.5 Friends And Related Function Documentation

4.1023.5.1 template<typename _RealType = double> bool operator== (const uniform_real_distribution< _RealType > & *__d1*, const uniform_real_distribution< _RealType > & *__d2*) [friend]

Return true if two uniform real distributions have the same parameters.

Definition at line 1889 of file random.h.

The documentation for this class was generated from the following files:

4.1025.1 Detailed Description

template<typename _Tp, typename _Dp = default_delete<_Tp>>class std::unique_ptr< _Tp, _Dp >

20.7.1.2 unique_ptr for single objects.

Definition at line 242 of file unique_ptr.h.

4.1025.2 Constructor & Destructor Documentation

4.1025.2.1 template<typename _Tp, typename _Dp = default_delete<_Tp>> template<typename _Del = _Dp, typename = _DeleterConstraint<_Del>> constexpr std::unique_ptr< _Tp, _Dp >::unique_ptr ( ) [inline], [noexcept]

Default constructor, creates a unique_ptr that owns nothing.

Definition at line 269 of file unique_ptr.h.

4.1025.2.2 template<typename _Tp, typename _Dp = default_delete<_Tp>> template<typename _Del = _Dp, typename = _DeleterConstraint<_Del>> std::unique_ptr< _Tp, _Dp >::unique_ptr (pointer __p) [inline], [explicit], [noexcept]

Takes ownership of a pointer.

Parameters

__p	A pointer to an object of element_type

The deleter will be value-initialized.

Definition at line 281 of file unique_ptr.h.

4.1025.2.3 template<typename _Tp, typename _Dp = default_delete<_Tp>> template<typename _Del = deleter_type, typename = _Require<is_copy_constructible<_Del>>> std::unique_ptr< _Tp, _Dp >::unique_ptr (pointer __p, const deleter_type & __d) [inline], [noexcept]

Takes ownership of a pointer.

Parameters

__p	A pointer to an object of element_type
__d	A reference to a deleter.

The deleter will be initialized with __d

Definition at line 294 of file unique_ptr.h.

4.1025.2.4 template<typename _Tp, typename _Dp = default_delete<_Tp>> template<typename _Del = deleter_type, typename = _Require<is_move_constructible<_Del>>> std::unique_ptr< _Tp, _Dp >::unique_ptr (pointer __p, __enable_if_t<!is_lvalue_reference< _Del >::value, _Del && > __d) [inline], [noexcept]

Takes ownership of a pointer.

Parameters

__p	A pointer to an object of element_type

__d	An rvalue reference to a (non-reference) deleter.

The deleter will be initialized with `std::move(__d)`

Definition at line 306 of file unique_ptr.h.

4.1025.2.5 template<typename _Tp, typename _Dp = default_delete<_Tp>> template<typename _Del = _Dp, typename = _DeleterConstraint<_Del>> constexpr std::unique_ptr< _Tp, _Dp >::unique_ptr (nullptr_t) [inline], [noexcept]

Creates a unique_ptr that owns nothing.

Definition at line 320 of file unique_ptr.h.

4.1025.2.6 template<typename _Tp, typename _Dp = default_delete<_Tp>> std::unique_ptr< _Tp, _Dp >::unique_ptr (unique_ptr< _Tp, _Dp > &&) [default]

Move constructor.

4.1025.2.7 template<typename _Tp, typename _Dp = default_delete<_Tp>> template<typename _Up , typename _Ep , typename = _Require< __safe_conversion_up<_Up, _Ep>, typename conditional<is_reference<_Dp>::value, is_same<_Ep, _Dp>, is_convertible<_Ep, _Dp>>::type>> std::unique_ptr< _Tp, _Dp >::unique_ptr (unique_ptr< _Up, _Ep > && *__u*) [inline], [noexcept]

Converting constructor from another type.

Requires that the pointer owned by `__u` is convertible to the type of pointer owned by this object, `__u` does not own an array, and `__u` has a compatible deleter type.

Definition at line 340 of file unique_ptr.h.

4.1025.2.8 template<typename _Tp, typename _Dp = default_delete<_Tp>> std::unique_ptr< _Tp, _Dp >::~unique_ptr ( ) [inline], [noexcept]

Destructor, invokes the deleter if the stored pointer is not null.

Definition at line 355 of file unique_ptr.h.

4.1025.3 Member Function Documentation

4.1025.3.1 template<typename _Tp, typename _Dp = default_delete<_Tp>> pointer std::unique_ptr< _Tp, _Dp >::get (void) const [inline], [noexcept]

Return the stored pointer.

Definition at line 421 of file unique_ptr.h.

Referenced by std::unique_ptr< _Tp, _Dp >::operator!=(), std::unique_ptr< _Tp, _Dp >::operator==(), and std::unique_ptr< _Tp, _Dp >::operator>().

4.1025.3.2 template<typename _Tp, typename _Dp = default_delete<_Tp>> deleter_type& std::unique_ptr< _Tp, _Dp >::get_deleter ( ) [inline], [noexcept]

Return a reference to the stored deleter.

Definition at line 426 of file unique_ptr.h.

Referenced by std::unique_ptr< _Result< _Res > >::operator=(), std::unique_ptr< _Tp[], _Dp >::operator=(), std::unique_ptr< _Result< _Res > >::~unique_ptr(), and std::unique_ptr< _Tp[], _Dp >::~unique_ptr().

4.1025.3.3 template<typename _Tp, typename _Dp = default_delete<_Tp>> const deleter_type& std::unique_ptr< _Tp, _Dp >::get_deleter ( ) const [inline], [noexcept]

Return a reference to the stored deleter.

Definition at line 431 of file unique_ptr.h.

4.1025.3.4 template<typename _Tp, typename _Dp = default_delete<_Tp>> std::unique_ptr< _Tp, _Dp >::operator bool ( ) const [inline], [explicit], [noexcept]

Return `true` if the stored pointer is not null.

Definition at line 435 of file unique_ptr.h.

4.1025.3.5 template<typename _Tp, typename _Dp = default_delete<_Tp>> add_lvalue_reference<element_type>::type std::unique_ptr< _Tp, _Dp >::operator* ( ) const [inline]

Dereference the stored pointer.

Definition at line 405 of file unique_ptr.h.

4.1025.3.6 template<typename _Tp, typename _Dp = default_delete<_Tp>> pointer std::unique_ptr< _Tp, _Dp >::operator-> ( ) const [inline], [noexcept]

Return the stored pointer.

Definition at line 413 of file unique_ptr.h.

4.1025.3.7 template<typename _Tp, typename _Dp = default_delete<_Tp>> unique_ptr& std::unique_ptr< _Tp, _Dp >::operator= (unique_ptr< _Tp, _Dp > &&) [default]

Move assignment operator.

Invokes the deleter if this object owns a pointer.

4.1025.3.8 template<typename _Tp, typename _Dp = default_delete<_Tp>> template<typename _Up , typename _Ep > enable_if< __and_< __safe_conversion_up<_Up, _Ep>, is_assignable<deleter_type&, _Ep&&> >::value, unique_ptr&>::type std::unique_ptr< _Tp, _Dp >::operator= (unique_ptr< _Up, _Ep > && __u) [inline], [noexcept]

Assignment from another type.

Parameters

__u	The object to transfer ownership from, which owns a convertible pointer to a non-array object.

Invokes the deleter if this object owns a pointer.

Definition at line 386 of file unique_ptr.h.

4.1025.3.9 template<typename _Tp, typename _Dp = default_delete<_Tp>> unique_ptr& std::unique_ptr< _Tp, _Dp >::operator= (nullptr_t) [inline], [noexcept]

Reset the unique_ptr to empty, invoking the deleter if necessary.

Definition at line 395 of file unique_ptr.h.

4.1025.3.10 template<typename _Tp, typename _Dp = default_delete<_Tp>> pointer std::unique_ptr< _Tp, _Dp >::release ( ) [inline], [noexcept]

Release ownership of any stored pointer.

Definition at line 442 of file unique_ptr.h.

4.1025.3.11 template<typename _Tp, typename _Dp = default_delete<_Tp>> void std::unique_ptr< _Tp, _Dp >::reset (pointer __p = pointer()) [inline], [noexcept]

Replace the stored pointer.

Parameters

__p	The new pointer to store.

The deleter will be invoked if a pointer is already owned.

Definition at line 452 of file unique_ptr.h.

Referenced by std::unique_ptr< _Result< _Res > >::operator=(), and std::unique_ptr< _Tp[], _Dp >::operator=().

4.1025.3.12 template<typename _Tp, typename _Dp = default_delete<_Tp>> void std::unique_ptr< _Tp, _Dp >::swap (unique_ptr< _Tp, _Dp > & __u) [inline], [noexcept]

Exchange the pointer and deleter with another object.

Definition at line 461 of file unique_ptr.h.

4.1026.1 Detailed Description

template<typename _Tp, typename _Dp>class std::unique_ptr< _Tp[], _Dp >

20.7.1.3 unique_ptr for array objects with a runtime length

Definition at line 477 of file unique_ptr.h.

4.1026.2 Constructor & Destructor Documentation

4.1026.2.1 template<typename _Tp , typename _Dp > template<typename _Del = _Dp, typename = _DeleterConstraint<_Del>> constexpr std::unique_ptr< _Tp[], _Dp >::unique_ptr ( ) [inline], [noexcept]

Default constructor, creates a unique_ptr that owns nothing.

Definition at line 530 of file unique_ptr.h.

4.1026.2.2 template<typename _Tp , typename _Dp > template<typename _Up , typename _Vp = _Dp, typename = _DeleterConstraint<_Vp>, typename = typename enable_if< __safe_conversion_raw<_Up>::value, bool>::type> std::unique_ptr< _Tp[], _Dp >::unique_ptr (_Up __p) [inline], [explicit], [noexcept]

Takes ownership of a pointer.

Parameters

__p	A pointer to an array of a type safely convertible to an array of `element_type`

The deleter will be value-initialized.

Definition at line 547 of file unique_ptr.h.

4.1026.2.3 template<typename _Tp , typename _Dp > template<typename _Up , typename _Del = deleter_type, typename = _Require<__safe_conversion_raw<_Up>, is_copy_constructible<_Del>>> std::unique_ptr< _Tp[], _Dp >::unique_ptr (_Up __p, const deleter_type & __d) [inline], [noexcept]

Takes ownership of a pointer.

Parameters

__p	A pointer to an array of a type safely convertible to an array of `element_type`
__d	A reference to a deleter.

The deleter will be initialized with `__d`

Definition at line 562 of file unique_ptr.h.

4.1026.2.4 template<typename _Tp , typename _Dp > template<typename _Up , typename _Del = deleter_type, typename = _Require<__safe_conversion_raw<_Up>, is_move_constructible<_Del>>> std::unique_ptr< _Tp[], _Dp >::unique_ptr (_Up __p, __enable_if_t<!is_lvalue_reference< _Del >::value, _Del && > __d) [inline], [noexcept]

Takes ownership of a pointer.

Parameters

__p	A pointer to an array of a type safely convertible to an array of `element_type`
__d	A reference to a deleter.

The deleter will be initialized with `std::move(__d)`

Definition at line 576 of file unique_ptr.h.

4.1026.2.5 template<typename _Tp , typename _Dp > std::unique_ptr< _Tp[], _Dp >::unique_ptr (unique_ptr< _Tp[], _Dp > &&) [default]

Move constructor.

4.1026.2.6 template<typename _Tp , typename _Dp > template<typename _Del = _Dp, typename = _DeleterConstraint<_Del>> constexpr std::unique_ptr< _Tp[], _Dp >::unique_ptr (nullptr_t) [inline], [noexcept]

Creates a unique_ptr that owns nothing.

Definition at line 594 of file unique_ptr.h.

4.1026.2.7 template<typename _Tp , typename _Dp > std::unique_ptr< _Tp[], _Dp >::~unique_ptr ( ) [inline]

Destructor, invokes the deleter if the stored pointer is not null.

Definition at line 608 of file unique_ptr.h.

References std::unique_ptr< _Tp, _Dp >::get_deleter().

4.1026.3 Member Function Documentation

4.1026.3.1 template<typename _Tp , typename _Dp > pointer std::unique_ptr< _Tp[], _Dp >::get (void) const [inline], [noexcept]

Return the stored pointer.

Definition at line 665 of file unique_ptr.h.

4.1026.3.2 template<typename _Tp , typename _Dp > deleter_type& std::unique_ptr< _Tp[], _Dp >::get_deleter ( ) [inline], [noexcept]

Return a reference to the stored deleter.

Definition at line 670 of file unique_ptr.h.

4.1026.3.3 template<typename _Tp , typename _Dp > const deleter_type& std::unique_ptr< _Tp[], _Dp >::get_deleter ( ) const [inline], [noexcept]

Return a reference to the stored deleter.

Definition at line 675 of file unique_ptr.h.

4.1026.3.4 template<typename _Tp , typename _Dp > std::unique_ptr< _Tp[], _Dp >::operator bool ( ) const [inline], [explicit], [noexcept]

Return `true` if the stored pointer is not null.

Definition at line 679 of file unique_ptr.h.

4.1026.3.5 template<typename _Tp , typename _Dp > unique_ptr& std::unique_ptr< _Tp[], _Dp >::operator= (unique_ptr< _Tp[], _Dp > &&) [default]

Move assignment operator.

Invokes the deleter if this object owns a pointer.

4.1026.3.6 template<typename _Tp , typename _Dp > template<typename _Up , typename _Ep > enable_if<__and_<__safe_conversion_up<_Up, _Ep>, is_assignable<deleter_type&, _Ep&&> >::value, unique_ptr&>::type std::unique_ptr< _Tp[], _Dp >::operator= (unique_ptr< _Up, _Ep > && __u) [inline], [noexcept]

Assignment from another type.

Parameters

__u	The object to transfer ownership from, which owns a convertible pointer to an array object.

Invokes the deleter if this object owns a pointer.

Definition at line 638 of file unique_ptr.h.

References std::unique_ptr< _Tp, _Dp >::get_deleter(), and std::unique_ptr< _Tp, _Dp >::reset().

4.1026.3.7 template<typename _Tp , typename _Dp > unique_ptr& std::unique_ptr< _Tp[], _Dp >::operator= (nullptr_t) [inline], [noexcept]

Reset the unique_ptr to empty, invoking the deleter if necessary.

Definition at line 647 of file unique_ptr.h.

References std::unique_ptr< _Tp, _Dp >::reset().

4.1026.3.8 template<typename _Tp , typename _Dp > std::add_lvalue_reference<element_type>::type std::unique_ptr< _Tp[], _Dp >::operator[] (size_t __i) const [inline]

Access an element of owned array.

Definition at line 657 of file unique_ptr.h.

4.1026.3.9 template<typename _Tp , typename _Dp > pointer std::unique_ptr< _Tp[], _Dp >::release ( ) [inline], [noexcept]

Release ownership of any stored pointer.

Definition at line 686 of file unique_ptr.h.

4.1026.3.10 template<typename _Tp , typename _Dp > template<typename _Up , typename = _Require< __or_<is_same<_Up, pointer>, __and_<is_same<pointer, element_type*>, is_pointer<_Up>, is_convertible< typename remove_pointer<_Up>::type(*)[], element_type(*)[] > > > >> void std::unique_ptr< _Tp[], _Dp >::reset (_Up __p) [inline], [noexcept]

Replace the stored pointer.

Parameters

__p	The new pointer to store.

The deleter will be invoked if a pointer is already owned.

Definition at line 708 of file unique_ptr.h.

References std::move().

4.1026.3.11 template<typename _Tp , typename _Dp > void std::unique_ptr< _Tp[], _Dp >::swap (unique_ptr< _Tp[], _Dp > & __u) [inline], [noexcept]

Exchange the pointer and deleter with another object.

Definition at line 716 of file unique_ptr.h.

4.1027.1 Detailed Description

template<typename _Key, typename _Tp, typename _Hash = hash<_Key>, typename _Pred = equal_to<_Key>, typename _Alloc = allocator<std::pair<const _Key, _Tp>>>class std::unordered_map< _Key, _Tp, _Hash, _Pred, _Alloc >

A standard container composed of unique keys (containing at most one of each key value) that associates values of another type with the keys.

Template Parameters

_Key	Type of key objects.
_Tp	Type of mapped objects.
_Hash	Hashing function object type, defaults to hash<_Value>.
_Pred	Predicate function object type, defaults to equal_to<_Value>.
_Alloc	Allocator type, defaults to std::allocator<std::pair<const _Key, _Tp>>.

Meets the requirements of a container, and unordered associative container

The resulting value type of the container is std::pair<const _Key, _Tp>.

Base is _Hashtable, dispatched at compile time via template alias __umap_hashtable.

Definition at line 102 of file unordered_map.h.

4.1027.3 Constructor & Destructor Documentation

4.1027.3.1 template<typename _Key, typename _Tp, typename _Hash = hash<_Key>, typename _Pred = equal_to<_Key>, typename _Alloc = allocator<std::pair<const _Key, _Tp>>> std::unordered_map< _Key, _Tp, _Hash, _Pred, _Alloc >::unordered_map ( ) [default]

Default constructor.

4.1027.3.2 template<typename _Key, typename _Tp, typename _Hash = hash<_Key>, typename _Pred = equal_to<_Key>, typename _Alloc = allocator<std::pair<const _Key, _Tp>>> std::unordered_map< _Key, _Tp, _Hash, _Pred, _Alloc >::unordered_map (size_type *__n*, const hasher & *__hf* = hasher(), const key_equal & *__eql* = key_equal(), const allocator_type & *__a* = allocator_type()) [inline], [explicit]

Default constructor creates no elements.

Parameters

__n	Minimal initial number of buckets.
__hf	A hash functor.
__eql	A key equality functor.
__a	An allocator object.

Definition at line 151 of file unordered_map.h.

4.1027.3.3 template<typename _Key, typename _Tp, typename _Hash = hash<_Key>, typename _Pred = equal_to<_Key>, typename _Alloc = allocator<std::pair<const _Key, _Tp>>> template<typename _InputIterator > std::unordered_map< _Key, _Tp, _Hash, _Pred, _Alloc >::unordered_map (_InputIterator *__first*, _InputIterator *__last*, size_type *__n* = 0, const hasher & *__hf* = hasher(), const key_equal & *__eql* = key_equal(), const allocator_type & *__a* = allocator_type()) [inline]

Builds an unordered_map from a range.

Parameters

__first	An input iterator.
__last	An input iterator.
__n	Minimal initial number of buckets.
__hf	A hash functor.
__eql	A key equality functor.
__a	An allocator object.

Create an unordered_map consisting of copies of the elements from [__first,__last). This is linear in N (where N is distance(__first,__last)).

Definition at line 172 of file unordered_map.h.

4.1027.3.4 template<typename _Key, typename _Tp, typename _Hash = hash<_Key>, typename _Pred = equal_to<_Key>, typename _Alloc = allocator<std::pair<const _Key, _Tp>>> std::unordered_map< _Key, _Tp, _Hash, _Pred, _Alloc >::unordered_map (const unordered_map< _Key, _Tp, _Hash, _Pred, _Alloc > &) [default]

Copy constructor.

4.1027.3.5 template<typename _Key, typename _Tp, typename _Hash = hash<_Key>, typename _Pred = equal_to<_Key>, typename _Alloc = allocator<std::pair<const _Key, _Tp>>> std::unordered_map< _Key, _Tp, _Hash, _Pred, _Alloc >::unordered_map (unordered_map< _Key, _Tp, _Hash, _Pred, _Alloc > &&) [default]

Move constructor.

4.1027.3.6 template<typename _Key, typename _Tp, typename _Hash = hash<_Key>, typename _Pred = equal_to<_Key>, typename _Alloc = allocator<std::pair<const _Key, _Tp>>> std::unordered_map< _Key, _Tp, _Hash, _Pred, _Alloc >::unordered_map (const allocator_type & __a) [inline], [explicit]

Creates an unordered_map with no elements.

Parameters

__a	An allocator object.

Definition at line 191 of file unordered_map.h.

4.1027.3.7 template<typename _Key, typename _Tp, typename _Hash = hash<_Key>, typename _Pred = equal_to<_Key>, typename _Alloc = allocator<std::pair<const _Key, _Tp>>> std::unordered_map< _Key, _Tp, _Hash, _Pred, _Alloc >::unordered_map (initializer_list< value_type > *__l*, size_type *__n* = 0, const hasher & *__hf* = hasher (), const key_equal & *__eql* = key_equal (), const allocator_type & *__a* = allocator_type ()) [inline]

Builds an unordered_map from an initializer_list.

Parameters

__l	An initializer_list.
__n	Minimal initial number of buckets.
__hf	A hash functor.
__eql	A key equality functor.
__a	An allocator object.

Create an unordered_map consisting of copies of the elements in the list. This is linear in N (where N is *__l.size()*).

Definition at line 226 of file unordered_map.h.

4.1027.4 Member Function Documentation

4.1027.4.1 template<typename _Key, typename _Tp, typename _Hash = hash<_Key>, typename _Pred = equal_to<_Key>, typename _Alloc = allocator<std::pair<const _Key, _Tp>>> mapped_type& std::unordered_map< _Key, _Tp, _Hash, _Pred, _Alloc >::at (const key_type & *__k*) [inline]

Access to unordered_map data.

Parameters

__k	The key for which data should be retrieved.

Returns

A reference to the data whose key is equal to *__k*, if such a data is present in the unordered_map.

Exceptions

std::out_of_range	If no such data is present.

Definition at line 1000 of file unordered_map.h.

4.1027.4.2 template<typename _Key, typename _Tp, typename _Hash = hash<_Key>, typename _Pred = equal_to<_Key>, typename _Alloc = allocator<std::pair<const _Key, _Tp>>> const mapped_type& std::unordered_map< _Key, _Tp, _Hash, _Pred, _Alloc >::at (const key_type & *__k*) const [inline]

Access to unordered_map data.

Parameters

__k	The key for which data should be retrieved.

Returns

A reference to the data whose key is equal to *__k*, if such a data is present in the unordered_map.

Exceptions

std::out_of_range	If no such data is present.

Definition at line 1004 of file unordered_map.h.

4.1027.4.3 template<typename _Key, typename _Tp, typename _Hash = hash<_Key>, typename _Pred = equal_to<_Key>, typename _Alloc = allocator<std::pair<const _Key, _Tp>>> iterator std::unordered_map< _Key, _Tp, _Hash, _Pred, _Alloc >::begin ( ) [inline], [noexcept]

Returns a read/write iterator that points to the first element in the unordered_map.

Definition at line 324 of file unordered_map.h.

4.1027.4.4 template<typename _Key, typename _Tp, typename _Hash = hash<_Key>, typename _Pred = equal_to<_Key>, typename _Alloc = allocator<std::pair<const _Key, _Tp>>> const_iterator std::unordered_map< _Key, _Tp, _Hash, _Pred, _Alloc >::begin ( ) const [inline], [noexcept]

Returns a read-only (constant) iterator that points to the first element in the unordered_map.

Definition at line 333 of file unordered_map.h.

4.1027.4.5 template<typename _Key, typename _Tp, typename _Hash = hash<_Key>, typename _Pred = equal_to<_Key>, typename _Alloc = allocator<std::pair<const _Key, _Tp>>> local_iterator std::unordered_map< _Key, _Tp, _Hash, _Pred, _Alloc >::begin (size_type __n) [inline]

Returns a read/write iterator pointing to the first bucket element.

Parameters

__n	The bucket index.

Returns

A read/write local iterator.

Definition at line 1045 of file unordered_map.h.

4.1027.4.6 template<typename _Key, typename _Tp, typename _Hash = hash<_Key>, typename _Pred = equal_to<_Key>, typename _Alloc = allocator<std::pair<const _Key, _Tp>>> const_local_iterator std::unordered_map< _Key, _Tp, _Hash, _Pred, _Alloc >::begin (size_type __n) const [inline]

Returns a read-only (constant) iterator pointing to the first bucket element.

Parameters

__n	The bucket index.

Returns

A read-only local iterator.

Definition at line 1056 of file unordered_map.h.

4.1027.4.7 template<typename _Key, typename _Tp, typename _Hash = hash<_Key>, typename _Pred = equal_to<_Key>, typename _Alloc = allocator<std::pair<const _Key, _Tp>>> size_type std::unordered_map< _Key, _Tp, _Hash, _Pred, _Alloc >::bucket_count ( ) const [inline], [noexcept]

Returns the number of buckets of the unordered_map.

Definition at line 1012 of file unordered_map.h.

4.1027.4.8 template<typename _Key, typename _Tp, typename _Hash = hash<_Key>, typename _Pred = equal_to<_Key>, typename _Alloc = allocator<std::pair<const _Key, _Tp>>> const_iterator std::unordered_map< _Key, _Tp, _Hash, _Pred, _Alloc >::cbegin ( ) const [inline], [noexcept]

Returns a read-only (constant) iterator that points to the first element in the unordered_map.

Definition at line 337 of file unordered_map.h.

4.1027.4.9 template<typename _Key, typename _Tp, typename _Hash = hash<_Key>, typename _Pred = equal_to<_Key>, typename _Alloc = allocator<std::pair<const _Key, _Tp>>> const_local_iterator std::unordered_map< _Key, _Tp, _Hash, _Pred, _Alloc >::cbegin (size_type __n) const [inline]

Returns a read-only (constant) iterator pointing to the first bucket element.

Parameters

__n	The bucket index.

Returns

A read-only local iterator.

Definition at line 1060 of file unordered_map.h.

4.1027.4.10 template<typename _Key, typename _Tp, typename _Hash = hash<_Key>, typename _Pred = equal_to<_Key>, typename _Alloc = allocator<std::pair<const _Key, _Tp>>> const_iterator std::unordered_map< _Key, _Tp, _Hash, _Pred, _Alloc >::cend ( ) const [inline], [noexcept]

Returns a read-only (constant) iterator that points one past the last element in the unordered_map.

Definition at line 359 of file unordered_map.h.

4.1027.4.11 template<typename _Key, typename _Tp, typename _Hash = hash<_Key>, typename _Pred = equal_to<_Key>, typename _Alloc = allocator<std::pair<const _Key, _Tp>>> const_local_iterator std::unordered_map< _Key, _Tp, _Hash, _Pred, _Alloc >::cend (size_type __n) const [inline]

Returns a read-only (constant) iterator pointing to one past the last bucket elements.

Parameters

__n	The bucket index.

Returns

A read-only local iterator.

Definition at line 1086 of file unordered_map.h.

4.1027.4.12 template<typename _Key, typename _Tp, typename _Hash = hash<_Key>, typename _Pred = equal_to<_Key>, typename _Alloc = allocator<std::pair<const _Key, _Tp>>> void std::unordered_map< _Key, _Tp, _Hash, _Pred, _Alloc >::clear ( ) [inline], [noexcept]

Erases all elements in an unordered_map. Note that this function only erases the elements, and that if the elements themselves are pointers, the pointed-to memory is not touched in any way. Managing the pointer is the user's responsibility.

Definition at line 841 of file unordered_map.h.

4.1027.4.13 template<typename _Key, typename _Tp, typename _Hash = hash<_Key>, typename _Pred = equal_to<_Key>, typename _Alloc = allocator<std::pair<const _Key, _Tp>>> size_type std::unordered_map< _Key, _Tp, _Hash, _Pred, _Alloc >::count (const key_type & *__x*) const [inline]

Finds the number of elements.

Parameters

__x	Key to count.

Returns

Number of elements with specified key.

This function only makes sense for unordered_multimap; for unordered_map the result will either be 0 (not present) or 1 (present).

Definition at line 937 of file unordered_map.h.

4.1027.4.14 template<typename _Key, typename _Tp, typename _Hash = hash<_Key>, typename _Pred = equal_to<_Key>, typename _Alloc = allocator<std::pair<const _Key, _Tp>>> template<typename... _Args> std::pair<iterator, bool> std::unordered_map< _Key, _Tp, _Hash, _Pred, _Alloc >::emplace (_Args &&... *__args*) [inline]

Attempts to build and insert a std::pair into the unordered_map.

Parameters

__args	Arguments used to generate a new pair instance (see std::piecewise_contruct for passing arguments to each part of the pair constructor).

Returns

A pair, of which the first element is an iterator that points to the possibly inserted pair, and the second is a bool that is true if the pair was actually inserted.

This function attempts to build and insert a (key, value) pair into the unordered_map. An unordered_map relies on unique keys and thus a pair is only inserted if its first element (the key) is not already present in the unordered_map.

Insertion requires amortized constant time.

Definition at line 387 of file unordered_map.h.

4.1027.4.15 template<typename _Key, typename _Tp, typename _Hash = hash<_Key>, typename _Pred = equal_to<_Key>, typename _Alloc = allocator<std::pair<const _Key, _Tp>>> template<typename... _Args> iterator std::unordered_map< _Key, _Tp, _Hash, _Pred, _Alloc >::emplace_hint (const_iterator __pos, _Args &&... __args) [inline]

Attempts to build and insert a std::pair into the unordered_map.

Parameters

__pos	An iterator that serves as a hint as to where the pair should be inserted.
__args	Arguments used to generate a new pair instance (see std::piecewise_contruct for passing arguments to each part of the pair constructor).

Returns

An iterator that points to the element with key of the std::pair built from *__args* (may or may not be that std::pair).

This function is not concerned about whether the insertion took place, and thus does not return a boolean like the single-argument emplace() does. Note that the first parameter is only a hint and can potentially improve the performance of the insertion process. A bad hint would cause no gains in efficiency.

See https://gcc.gnu.org/onlinedocs/libstdc++/manual/associative.html#containers.associative.insert_hints for more on *hinting*.

Insertion requires amortized constant time.

Definition at line 418 of file unordered_map.h.

4.1027.4.16 template<typename _Key, typename _Tp, typename _Hash = hash<_Key>, typename _Pred = equal_to<_Key>, typename _Alloc = allocator<std::pair<const _Key, _Tp>>> bool std::unordered_map< _Key, _Tp, _Hash, _Pred, _Alloc >::empty ( ) const [inline], [noexcept]

Returns true if the unordered_map is empty.

Definition at line 304 of file unordered_map.h.

4.1027.4.17 template<typename _Key, typename _Tp, typename _Hash = hash<_Key>, typename _Pred = equal_to<_Key>, typename _Alloc = allocator<std::pair<const _Key, _Tp>>> iterator std::unordered_map< _Key, _Tp, _Hash, _Pred, _Alloc >::end ( ) [inline], [noexcept]

Returns a read/write iterator that points one past the last element in the unordered_map.

Definition at line 346 of file unordered_map.h.

4.1027.4.18 template<typename _Key, typename _Tp, typename _Hash = hash<_Key>, typename _Pred = equal_to<_Key>, typename _Alloc = allocator<std::pair<const _Key, _Tp>>> const_iterator std::unordered_map< _Key, _Tp, _Hash, _Pred, _Alloc >::end ( ) const [inline], [noexcept]

Returns a read-only (constant) iterator that points one past the last element in the unordered_map.

Definition at line 355 of file unordered_map.h.

4.1027.4.19 template<typename _Key, typename _Tp, typename _Hash = hash<_Key>, typename _Pred = equal_to<_Key>, typename _Alloc = allocator<std::pair<const _Key, _Tp>>> local_iterator std::unordered_map< _Key, _Tp, _Hash, _Pred, _Alloc >::end (size_type __n) [inline]

Returns a read/write iterator pointing to one past the last bucket elements.

Parameters

__n	The bucket index.

Returns

A read/write local iterator.

Definition at line 1071 of file unordered_map.h.

4.1027.4.20 template<typename _Key, typename _Tp, typename _Hash = hash<_Key>, typename _Pred = equal_to<_Key>, typename _Alloc = allocator<std::pair<const _Key, _Tp>>> const_local_iterator std::unordered_map< _Key, _Tp, _Hash, _Pred, _Alloc >::end (size_type __n) const [inline]

Returns a read-only (constant) iterator pointing to one past the last bucket elements.

Parameters

__n	The bucket index.

Returns

A read-only local iterator.

Definition at line 1082 of file unordered_map.h.

4.1027.4.21 template<typename _Key, typename _Tp, typename _Hash = hash<_Key>, typename _Pred = equal_to<_Key>, typename _Alloc = allocator<std::pair<const _Key, _Tp>>> std::pair<iterator, iterator> std::unordered_map< _Key, _Tp, _Hash, _Pred, _Alloc >::equal_range (const key_type & __x) [inline]

Finds a subsequence matching given key.

Parameters

__x	Key to be located.

Returns

Pair of iterators that possibly points to the subsequence matching given key.

This function probably only makes sense for unordered_multimap.

Definition at line 961 of file unordered_map.h.

4.1027.4.22 template<typename _Key, typename _Tp, typename _Hash = hash<_Key>, typename _Pred = equal_to<_Key>, typename _Alloc = allocator<std::pair<const _Key, _Tp>>> std::pair<const_iterator, const_iterator> std::unordered_map< _Key, _Tp, _Hash, _Pred, _Alloc >::equal_range (const key_type & __x) const [inline]

Finds a subsequence matching given key.

Parameters

__x	Key to be located.

Returns

Pair of iterators that possibly points to the subsequence matching given key.

This function probably only makes sense for unordered_multimap.

Definition at line 965 of file unordered_map.h.

4.1027.4.23 template<typename _Key, typename _Tp, typename _Hash = hash<_Key>, typename _Pred = equal_to<_Key>, typename _Alloc = allocator<std::pair<const _Key, _Tp>>> iterator std::unordered_map< _Key, _Tp, _Hash, _Pred, _Alloc >::erase (const_iterator *__position*) [inline]

Erases an element from an unordered_map.

Parameters

__position	An iterator pointing to the element to be erased.

Returns

An iterator pointing to the element immediately following *__position* prior to the element being erased. If no such element exists, end() is returned.

This function erases an element, pointed to by the given iterator, from an unordered_map. Note that this function only erases the element, and that if the element is itself a pointer, the pointed-to memory is not touched in any way. Managing the pointer is the user's responsibility.

Definition at line 791 of file unordered_map.h.

4.1027.4.24 template<typename _Key, typename _Tp, typename _Hash = hash<_Key>, typename _Pred = equal_to<_Key>, typename _Alloc = allocator<std::pair<const _Key, _Tp>>> iterator std::unordered_map< _Key, _Tp, _Hash, _Pred, _Alloc >::erase (iterator *__position*) [inline]

Erases an element from an unordered_map.

Parameters

__position	An iterator pointing to the element to be erased.

Returns

An iterator pointing to the element immediately following *__position* prior to the element being erased. If no such element exists, end() is returned.

This function erases an element, pointed to by the given iterator, from an unordered_map. Note that this function only erases the element, and that if the element is itself a pointer, the pointed-to memory is not touched in any way. Managing the pointer is the user's responsibility.

Definition at line 796 of file unordered_map.h.

4.1027.4.25 template<typename _Key, typename _Tp, typename _Hash = hash<_Key>, typename _Pred = equal_to<_Key>, typename _Alloc = allocator<std::pair<const _Key, _Tp>>> size_type std::unordered_map< _Key, _Tp, _Hash, _Pred, _Alloc >::erase (const key_type & *__x*) [inline]

Erases elements according to the provided key.

Parameters

__x	Key of element to be erased.

Returns

The number of elements erased.

This function erases all the elements located by the given key from an unordered_map. For an unordered_map the result of this function can only be 0 (not present) or 1 (present). Note that this function only erases the element, and that if the element is itself a pointer, the pointed-to memory is not touched in any way. Managing the pointer is the user's responsibility.

Definition at line 813 of file unordered_map.h.

4.1027.4.26 template<typename _Key, typename _Tp, typename _Hash = hash<_Key>, typename _Pred = equal_to<_Key>, typename _Alloc = allocator<std::pair<const _Key, _Tp>>> iterator std::unordered_map< _Key, _Tp, _Hash, _Pred, _Alloc >::erase (const_iterator *__first,* const_iterator *__last*) [inline]

Erases a [__first,__last) range of elements from an unordered_map.

Parameters

__first	Iterator pointing to the start of the range to be erased.
__last	Iterator pointing to the end of the range to be erased.

Returns

The iterator *__last*.

This function erases a sequence of elements from an unordered_map. Note that this function only erases the elements, and that if the element is itself a pointer, the pointed-to memory is not touched in any way. Managing the pointer is the user's responsibility.

Definition at line 831 of file unordered_map.h.

4.1027.4.27 template<typename _Key, typename _Tp, typename _Hash = hash<_Key>, typename _Pred = equal_to<_Key>, typename _Alloc = allocator<std::pair<const _Key, _Tp>>> iterator std::unordered_map< _Key, _Tp, _Hash, _Pred, _Alloc >::find (const key_type & *__x*) [inline]

Tries to locate an element in an unordered_map.

Parameters

__x	Key to be located.

Returns

Iterator pointing to sought-after element, or end() if not found.

This function takes a key and tries to locate the element with which the key matches. If successful the function returns an iterator pointing to the sought after element. If unsuccessful it returns the past-the-end (`end()`) iterator.

Definition at line 919 of file unordered_map.h.

4.1027.4.28 template<typename _Key, typename _Tp, typename _Hash = hash<_Key>, typename _Pred = equal_to<_Key>, typename _Alloc = allocator<std::pair<const _Key, _Tp>>> const_iterator std::unordered_map< _Key, _Tp, _Hash, _Pred, _Alloc >::find (const key_type & *__x*) const [inline]

Tries to locate an element in an unordered_map.

Parameters

__x	Key to be located.

Returns

Iterator pointing to sought-after element, or end() if not found.

This function takes a key and tries to locate the element with which the key matches. If successful the function returns an iterator pointing to the sought after element. If unsuccessful it returns the past-the-end (`end()`) iterator.

Definition at line 923 of file unordered_map.h.

4.1027.4.29 template<typename _Key, typename _Tp, typename _Hash = hash<_Key>, typename _Pred = equal_to<_Key>, typename _Alloc = allocator<std::pair<const _Key, _Tp>>> allocator_type std::unordered_map< _Key, _Tp, _Hash, _Pred, _Alloc >::get_allocator ( ) const [inline], [noexcept]

Returns the allocator object used by the unordered_map.

Definition at line 297 of file unordered_map.h.

4.1027.4.30 template<typename _Key, typename _Tp, typename _Hash = hash<_Key>, typename _Pred = equal_to<_Key>, typename _Alloc = allocator<std::pair<const _Key, _Tp>>> hasher std::unordered_map< _Key, _Tp, _Hash, _Pred, _Alloc >::hash_function ( ) const [inline]

Returns the hash functor object with which the unordered_map was constructed.

Definition at line 895 of file unordered_map.h.

4.1027.4.31 template<typename _Key, typename _Tp, typename _Hash = hash<_Key>, typename _Pred = equal_to<_Key>, typename _Alloc = allocator<std::pair<const _Key, _Tp>>> std::pair<iterator, bool> std::unordered_map< _Key, _Tp, _Hash, _Pred, _Alloc >::insert (const value_type & __x) [inline]

Attempts to insert a std::pair into the unordered_map.

Parameters

__x	Pair to be inserted (see std::make_pair for easy creation of pairs).

Returns

A pair, of which the first element is an iterator that points to the possibly inserted pair, and the second is a bool that is true if the pair was actually inserted.

This function attempts to insert a (key, value) pair into the unordered_map. An unordered_map relies on unique keys and thus a pair is only inserted if its first element (the key) is not already present in the unordered_map.

Insertion requires amortized constant time.

Definition at line 579 of file unordered_map.h.

4.1027.4.32 template<typename _Key, typename _Tp, typename _Hash = hash<_Key>, typename _Pred = equal_to<_Key>, typename _Alloc = allocator<std::pair<const _Key, _Tp>>> std::pair<iterator, bool> std::unordered_map< _Key, _Tp, _Hash, _Pred, _Alloc >::insert (value_type && __x) [inline]

Attempts to insert a std::pair into the unordered_map.

Parameters

__x	Pair to be inserted (see std::make_pair for easy creation of pairs).

Returns

A pair, of which the first element is an iterator that points to the possibly inserted pair, and the second is a bool that is true if the pair was actually inserted.

This function attempts to insert a (key, value) pair into the unordered_map. An unordered_map relies on unique keys and thus a pair is only inserted if its first element (the key) is not already present in the unordered_map.

Insertion requires amortized constant time.

Definition at line 585 of file unordered_map.h.

4.1027.4.33 template<typename _Key, typename _Tp, typename _Hash = hash<_Key>, typename _Pred = equal_to<_Key>, typename _Alloc = allocator<std::pair<const _Key, _Tp>>> template<typename _Pair > __enable_if_t<is_constructible<value_type, _Pair&&>::value, pair<iterator, bool> > std::unordered_map< _Key, _Tp, _Hash, _Pred, _Alloc >::insert (_Pair && __x) [inline]

Attempts to insert a std::pair into the unordered_map.

Parameters

__x	Pair to be inserted (see std::make_pair for easy creation of pairs).

Returns

A pair, of which the first element is an iterator that points to the possibly inserted pair, and the second is a bool that is true if the pair was actually inserted.

This function attempts to insert a (key, value) pair into the unordered_map. An unordered_map relies on unique keys and thus a pair is only inserted if its first element (the key) is not already present in the unordered_map.

Insertion requires amortized constant time.

Definition at line 591 of file unordered_map.h.

4.1027.4.34 template<typename _Key, typename _Tp, typename _Hash = hash<_Key>, typename _Pred = equal_to<_Key>, typename _Alloc = allocator<std::pair<const _Key, _Tp>>> iterator std::unordered_map< _Key, _Tp, _Hash, _Pred, _Alloc >::insert (const_iterator *__hint,* const value_type & *__x*) [inline]

Attempts to insert a std::pair into the unordered_map.

Parameters

__hint	An iterator that serves as a hint as to where the pair should be inserted.
__x	Pair to be inserted (see std::make_pair for easy creation of pairs).

Returns

An iterator that points to the element with key of *__x* (may or may not be the pair passed in).

This function is not concerned about whether the insertion took place, and thus does not return a boolean like the single-argument insert() does. Note that the first parameter is only a hint and can potentially improve the performance of the insertion process. A bad hint would cause no gains in efficiency.

See https://gcc.gnu.org/onlinedocs/libstdc++/manual/associative.html#containers.associative.insert_hints for more on *hinting*.

Insertion requires amortized constant time.

Definition at line 618 of file unordered_map.h.

4.1027.4.35 template<typename _Key, typename _Tp, typename _Hash = hash<_Key>, typename _Pred = equal_to<_Key>, typename _Alloc = allocator<std::pair<const _Key, _Tp>>> iterator std::unordered_map< _Key, _Tp, _Hash, _Pred, _Alloc >::insert (const_iterator __hint, value_type && __x) [inline]

Attempts to insert a std::pair into the unordered_map.

Parameters

__hint	An iterator that serves as a hint as to where the pair should be inserted.
__x	Pair to be inserted (see std::make_pair for easy creation of pairs).

Returns

An iterator that points to the element with key of *__x* (may or may not be the pair passed in).

This function is not concerned about whether the insertion took place, and thus does not return a boolean like the single-argument insert() does. Note that the first parameter is only a hint and can potentially improve the performance of the insertion process. A bad hint would cause no gains in efficiency.

See https://gcc.gnu.org/onlinedocs/libstdc++/manual/associative.html#containers.associative.insert_hints for more on *hinting*.

Insertion requires amortized constant time.

Definition at line 624 of file unordered_map.h.

4.1027.4.36 template<typename _Key, typename _Tp, typename _Hash = hash<_Key>, typename _Pred = equal_to<_Key>, typename _Alloc = allocator<std::pair<const _Key, _Tp>>> template<typename _Pair > __enable_if_t<is_constructible<value_type, _Pair&&>::value, iterator> std::unordered_map< _Key, _Tp, _Hash, _Pred, _Alloc >::insert (const_iterator __hint, _Pair && __x) [inline]

Attempts to insert a std::pair into the unordered_map.

Parameters

__hint	An iterator that serves as a hint as to where the pair should be inserted.
__x	Pair to be inserted (see std::make_pair for easy creation of pairs).

Returns

An iterator that points to the element with key of *__x* (may or may not be the pair passed in).

This function is not concerned about whether the insertion took place, and thus does not return a boolean like the single-argument insert() does. Note that the first parameter is only a hint and can potentially improve the performance of the insertion process. A bad hint would cause no gains in efficiency.

See https://gcc.gnu.org/onlinedocs/libstdc++/manual/associative.html#containers.associative.insert_hints for more on *hinting*.

Insertion requires amortized constant time.

Definition at line 629 of file unordered_map.h.

4.1027.4.37 template<typename _Key, typename _Tp, typename _Hash = hash<_Key>, typename _Pred = equal_to<_Key>, typename _Alloc = allocator<std::pair<const _Key, _Tp>>> template<typename _InputIterator > void **std::unordered_map**< _Key, _Tp, _Hash, _Pred, _Alloc >::insert (_InputIterator *__first,* _InputIterator *__last*) [inline]

A template function that attempts to insert a range of elements.

Parameters

__first	Iterator pointing to the start of the range to be inserted.
__last	Iterator pointing to the end of the range.

Complexity similar to that of the range constructor.

Definition at line 644 of file unordered_map.h.

4.1027.4.38 template<typename _Key, typename _Tp, typename _Hash = hash<_Key>, typename _Pred = equal_to<_Key>, typename _Alloc = allocator<std::pair<const _Key, _Tp>>> void std::unordered_map< _Key, _Tp, _Hash, _Pred, _Alloc >::insert (initializer_list< value_type > __l) [inline]

Attempts to insert a list of elements into the unordered_map.

Parameters

__l	A std::initializer_list<value_type> of elements to be inserted.

Complexity similar to that of the range constructor.

Definition at line 655 of file unordered_map.h.

4.1027.4.39 template<typename _Key, typename _Tp, typename _Hash = hash<_Key>, typename _Pred = equal_to<_Key>, typename _Alloc = allocator<std::pair<const _Key, _Tp>>> key_equal std::unordered_map< _Key, _Tp, _Hash, _Pred, _Alloc >::key_eq ( ) const [inline]

Returns the key comparison object with which the unordered_map was constructed.

Definition at line 901 of file unordered_map.h.

4.1027.4.40 template<typename _Key, typename _Tp, typename _Hash = hash<_Key>, typename _Pred = equal_to<_Key>, typename _Alloc = allocator<std::pair<const _Key, _Tp>>> float std::unordered_map< _Key, _Tp, _Hash, _Pred, _Alloc >::load_factor ( ) const [inline], [noexcept]

Returns the average number of elements per bucket.

Definition at line 1094 of file unordered_map.h.

4.1027.4.41 template<typename _Key, typename _Tp, typename _Hash = hash<_Key>, typename _Pred = equal_to<_Key>, typename _Alloc = allocator<std::pair<const _Key, _Tp>>> size_type std::unordered_map< _Key, _Tp, _Hash, _Pred, _Alloc >::max_bucket_count ( ) const [inline], [noexcept]

Returns the maximum number of buckets of the unordered_map.

Definition at line 1017 of file unordered_map.h.

4.1027.4.42 template<typename _Key, typename _Tp, typename _Hash = hash<_Key>, typename _Pred = equal_to<_Key>, typename _Alloc = allocator<std::pair<const _Key, _Tp>>> float std::unordered_map< _Key, _Tp, _Hash, _Pred, _Alloc >::max_load_factor ( ) const [inline], [noexcept]

Returns a positive number that the unordered_map tries to keep the load factor less than or equal to.

Definition at line 1100 of file unordered_map.h.

4.1027.4.43 template<typename _Key, typename _Tp, typename _Hash = hash<_Key>, typename _Pred = equal_to<_Key>, typename _Alloc = allocator<std::pair<const _Key, _Tp>>> void std::unordered_map< _Key, _Tp, _Hash, _Pred, _Alloc >::max_load_factor (float __z) [inline]

Change the unordered_map maximum load factor.

Parameters

__z	The new maximum load factor.

Definition at line 1108 of file unordered_map.h.

4.1027.4.44 **template<typename _Key, typename _Tp, typename _Hash = hash<_Key>, typename _Pred = equal_to<_Key>, typename _Alloc = allocator<std::pair<const _Key, _Tp>>> size_type std::unordered_map< _Key, _Tp, _Hash, _Pred, _Alloc >::max_size ( ) const** [inline], [noexcept]

Returns the maximum size of the unordered_map.

Definition at line 314 of file unordered_map.h.

4.1027.4.45 **template<typename _Key, typename _Tp, typename _Hash = hash<_Key>, typename _Pred = equal_to<_Key>, typename _Alloc = allocator<std::pair<const _Key, _Tp>>> unordered_map& std::unordered_map< _Key, _Tp, _Hash, _Pred, _Alloc >::operator= (const unordered_map< _Key, _Tp, _Hash, _Pred, _Alloc > &)** [default]

Copy assignment operator.

4.1027.4.46 **template<typename _Key, typename _Tp, typename _Hash = hash<_Key>, typename _Pred = equal_to<_Key>, typename _Alloc = allocator<std::pair<const _Key, _Tp>>> unordered_map& std::unordered_map< _Key, _Tp, _Hash, _Pred, _Alloc >::operator= (unordered_map< _Key, _Tp, _Hash, _Pred, _Alloc > &&)** [default]

Move assignment operator.

4.1027.4.47 **template<typename _Key, typename _Tp, typename _Hash = hash<_Key>, typename _Pred = equal_to<_Key>, typename _Alloc = allocator<std::pair<const _Key, _Tp>>> unordered_map& std::unordered_map< _Key, _Tp, _Hash, _Pred, _Alloc >::operator= (initializer_list< value_type > *__l*)** [inline]

Unordered_map list assignment operator.

Parameters

__l	An initializer_list.

This function fills an unordered_map with copies of the elements in the initializer list *__l*.

Note that the assignment completely changes the unordered_map and that the resulting unordered_map's size is the same as the number of elements assigned.

Definition at line 289 of file unordered_map.h.

4.1027.4.48 **template<typename _Key, typename _Tp, typename _Hash = hash<_Key>, typename _Pred = equal_to<_Key>, typename _Alloc = allocator<std::pair<const _Key, _Tp>>> mapped_type& std::unordered_map< _Key, _Tp, _Hash, _Pred, _Alloc >::operator[] (const key_type & *__k*)** [inline]

Subscript ([]) access to unordered_map data.

Parameters

__k	The key for which data should be retrieved.

Returns

A reference to the data of the (key,data) pair.

Allows for easy lookup with the subscript ([])operator. Returns data associated with the key specified in subscript. If the key does not exist, a pair with that key is created using default values, which is then returned.

Lookup requires constant time.

Definition at line 983 of file unordered_map.h.

4.1027.4.49 template<typename _Key, typename _Tp, typename _Hash = hash<_Key>, typename _Pred = equal_to<_Key>, typename _Alloc = allocator<std::pair<const _Key, _Tp>>> mapped_type& std::unordered_map< _Key, _Tp, _Hash, _Pred, _Alloc >::operator[] (key_type && __k) [inline]

Subscript ([]) access to unordered_map data.

Parameters

__k	The key for which data should be retrieved.

Returns

A reference to the data of the (key,data) pair.

Allows for easy lookup with the subscript ([])operator. Returns data associated with the key specified in subscript. If the key does not exist, a pair with that key is created using default values, which is then returned.

Lookup requires constant time.

Definition at line 987 of file unordered_map.h.

4.1027.4.50 template<typename _Key, typename _Tp, typename _Hash = hash<_Key>, typename _Pred = equal_to<_Key>, typename _Alloc = allocator<std::pair<const _Key, _Tp>>> void std::unordered_map< _Key, _Tp, _Hash, _Pred, _Alloc >::rehash (size_type __n) [inline]

May rehash the unordered_map.

Parameters

__n	The new number of buckets.

Rehash will occur only if the new number of buckets respect the unordered_map maximum load factor.

Definition at line 1119 of file unordered_map.h.

4.1027.4.51 template<typename _Key, typename _Tp, typename _Hash = hash<_Key>, typename _Pred = equal_to<_Key>, typename _Alloc = allocator<std::pair<const _Key, _Tp>>> void std::unordered_map< _Key, _Tp, _Hash, _Pred, _Alloc >::reserve (size_type __n) [inline]

Prepare the unordered_map for a specified number of elements.

Parameters

__n	Number of elements required.

Same as rehash(ceil(n / max_load_factor())).

Definition at line 1130 of file unordered_map.h.

4.1027.4.52 template<typename _Key, typename _Tp, typename _Hash = hash<_Key>, typename _Pred = equal_to<_Key>, typename _Alloc = allocator<std::pair<const _Key, _Tp>>> size_type std::unordered_map< _Key, _Tp, _Hash, _Pred, _Alloc >::size ( ) const [inline], [noexcept]

Returns the size of the unordered_map.

Definition at line 309 of file unordered_map.h.

4.1027.4.53 template<typename _Key, typename _Tp, typename _Hash = hash<_Key>, typename _Pred = equal_to<_Key>, typename _Alloc = allocator<std::pair<const _Key, _Tp>>> void std::unordered_map< _Key, _Tp, _Hash, _Pred, _Alloc >::swap (unordered_map< _Key, _Tp, _Hash, _Pred, _Alloc > & __x) [inline], [noexcept]

Swaps data with another unordered_map.

Parameters

__x	An unordered_map of the same element and allocator types.

This exchanges the elements between two unordered_map in constant time. Note that the global std::swap() function is specialized such that std::swap(m1,m2) will feed to this function.

Definition at line 855 of file unordered_map.h.

4.1028.1 Detailed Description

template<typename _Key, typename _Tp, typename _Hash, typename _Pred, typename _Allocator>class std::__debug::unordered_map< _Key, _Tp, _Hash, _Pred, _Allocator >

Class std::unordered_map with safety/checking/debug instrumentation.

Definition at line 41 of file debug/unordered_map.

4.1028.2 Member Function Documentation

4.1028.2.1 void __gnu_debug::_Safe_unordered_container_base::_M_detach_all ( ) [protected], [inherited]

Detach all iterators, leaving them singular.

4.1028.2.2 void __gnu_debug::_Safe_sequence_base::_M_detach_singular ( ) [protected], [inherited]

Detach all singular iterators.

Postcondition

for all iterators i attached to this sequence, i->_M_version == _M_version.

4.1028.2.3 __gnu_cxx::__mutex& __gnu_debug::_Safe_sequence_base::_M_get_mutex ( ) throw) [protected], [inherited]

For use in _Safe_sequence.

Referenced by __gnu_debug::_Safe_sequence< _Sequence >::_M_transfer_from_if().

4.1028.2.4 void __gnu_debug::_Safe_sequence_base::_M_invalidate_all ( ) const [inline], [protected], [inherited]

Invalidates all iterators.

Definition at line 256 of file safe_base.h.

References __gnu_debug::_Safe_sequence_base::_M_version.

4.1028.2.5 void __gnu_debug::_Safe_unordered_container< unordered_map< _Key, _Tp, _Hash, _Pred, _Alloc > >::_M_invalidate_if (_Predicate *__pred*) [protected], [inherited]

Invalidates all iterators `x` that reference this container, are not singular, and for which `__pred(x)` returns `true`. `__pred` will be invoked with the normal iterators nested in the safe ones.

4.1028.2.6 void __gnu_debug::_Safe_unordered_container< unordered_map< _Key, _Tp, _Hash, _Pred, _Alloc > >::_M_invalidate_local_if (_Predicate *__pred*) [protected], [inherited]

Invalidates all local iterators `x` that reference this container, are not singular, and for which `__pred(x)` returns `true`. `__pred` will be invoked with the normal local iterators nested in the safe ones.

4.1028.2.7 void __gnu_debug::_Safe_sequence_base::_M_revalidate_singular ( ) [protected], [inherited]

Revalidates all attached singular iterators. This method may be used to validate iterators that were invalidated before (but for some reason, such as an exception, need to become valid again).

4.1028.2.8 void __gnu_debug::_Safe_unordered_container_base::_M_swap (_Safe_unordered_container_base & __x) [protected], [noexcept], [inherited]

Swap this container with the given container. This operation also swaps ownership of the iterators, so that when the operation is complete all iterators that originally referenced one container now reference the other container.

4.1028.2.9 void __gnu_debug::_Safe_sequence_base::_M_swap (_Safe_sequence_base & __x) [protected], [noexcept], [inherited]

Swap this sequence with the given sequence. This operation also swaps ownership of the iterators, so that when the operation is complete all iterators that originally referenced one container now reference the other container.

4.1028.3 Member Data Documentation

4.1028.3.1 _Safe_iterator_base* __gnu_debug::_Safe_sequence_base::_M_const_iterators [inherited]

The list of constant iterators that reference this container.

Definition at line 197 of file safe_base.h.

Referenced by __gnu_debug::_Safe_sequence< _Sequence >::_M_transfer_from_if().

4.1028.3.2 _Safe_iterator_base* __gnu_debug::_Safe_unordered_container_base::_M_const_local_iterators [inherited]

The list of constant local iterators that reference this container.

Definition at line 130 of file safe_unordered_base.h.

4.1028.3.3 _Safe_iterator_base* __gnu_debug::_Safe_sequence_base::_M_iterators [inherited]

The list of mutable iterators that reference this container.

Definition at line 194 of file safe_base.h.

Referenced by __gnu_debug::_Safe_sequence< _Sequence >::_M_transfer_from_if().

4.1028.3.4 _Safe_iterator_base* __gnu_debug::_Safe_unordered_container_base::_M_local_iterators [inherited]

The list of mutable local iterators that reference this container.

Definition at line 127 of file safe_unordered_base.h.

4.1028.3.5 unsigned int __gnu_debug::_Safe_sequence_base::_M_version [mutable], [inherited]

The container version number. This number may never be 0.

Definition at line 200 of file safe_base.h.

Referenced by __gnu_debug::_Safe_sequence_base::_M_invalidate_all().

4.1029.1 Detailed Description

template<class _Key, class _Tp, class _Hash, class _Pred, class _Alloc>class std::unordered_multimap< _Key, _Tp, _Hash, _Pred, _Alloc >

A standard container composed of equivalent keys (possibly containing multiple of each key value) that associates values of another type with the keys.

Template Parameters

_Key	Type of key objects.
_Tp	Type of mapped objects.
_Hash	Hashing function object type, defaults to hash<_Value>.
_Pred	Predicate function object type, defaults to equal_to<_Value>.
_Alloc	Allocator type, defaults to std::allocator<std::pair<const _Key, _Tp>>.

Meets the requirements of a container, and unordered associative container

The resulting value type of the container is std::pair<const _Key, _Tp>.

Base is _Hashtable, dispatched at compile time via template alias __ummap_hashtable.

Definition at line 73 of file unordered_map.h.

4.1029.2 Member Typedef Documentation

4.1029.2.1 template<class _Key , class _Tp , class _Hash , class _Pred , class _Alloc > typedef _Hashtable::allocator_type std::unordered_multimap< _Key, _Tp, _Hash, _Pred, _Alloc >::allocator_type

Public typedefs.

Definition at line 1259 of file unordered_map.h.

4.1029.3 Constructor & Destructor Documentation

4.1029.3.1 template<class _Key , class _Tp , class _Hash , class _Pred , class _Alloc > std::unordered_multimap< _Key, _Tp, _Hash, _Pred, _Alloc >::unordered_multimap ( ) [default]

Default constructor.

4.1029.3.2 template<class _Key , class _Tp , class _Hash , class _Pred , class _Alloc > std::unordered_multimap< _Key, _Tp, _Hash, _Pred, _Alloc >::unordered_multimap (size_type *__n,* const hasher & *__hf* = hasher (), const key_equal & *__eql* = key_equal (), const allocator_type & *__a* = allocator_type ()) [inline], [explicit]

Default constructor creates no elements.

Parameters

__n	Mnimal initial number of buckets.
__hf	A hash functor.
__eql	A key equality functor.
__a	An allocator object.

Definition at line 1297 of file unordered_map.h.

4.1029.3.3 template<class _Key , class _Tp , class _Hash , class _Pred , class _Alloc > template<typename _InputIterator > std::unordered_multimap< _Key, _Tp, _Hash, _Pred, _Alloc >::unordered_multimap (_InputIterator *__first,* _InputIterator *__last,* size_type *__n =* 0, const hasher & *__hf =* hasher (), const key_equal & *__eql =* key_equal (), const allocator_type & *__a =* allocator_type ()) [inline]

Builds an unordered_multimap from a range.

Parameters

__first	An input iterator.
__last	An input iterator.
__n	Minimal initial number of buckets.
__hf	A hash functor.
__eql	A key equality functor.
__a	An allocator object.

Create an unordered_multimap consisting of copies of the elements from [__first,__last). This is linear in N (where N is distance(__first,__last)).

Definition at line 1318 of file unordered_map.h.

4.1029.3.4 template<class _Key , class _Tp , class _Hash , class _Pred , class _Alloc > std::unordered_multimap< _Key, _Tp, _Hash, _Pred, _Alloc >::unordered_multimap (const unordered_multimap< _Key, _Tp, _Hash, _Pred, _Alloc > &) [default]

Copy constructor.

4.1029.3.5 template<class _Key , class _Tp , class _Hash , class _Pred , class _Alloc > std::unordered_multimap< _Key, _Tp, _Hash, _Pred, _Alloc >::unordered_multimap (unordered_multimap< _Key, _Tp, _Hash, _Pred, _Alloc > &&) [default]

Move constructor.

4.1029.3.6 template<class _Key , class _Tp , class _Hash , class _Pred , class _Alloc > std::unordered_multimap< _Key, _Tp, _Hash, _Pred, _Alloc >::unordered_multimap (const allocator_type & *__a*) [inline], [explicit]

Creates an unordered_multimap with no elements.

Parameters

__a	An allocator object.

Definition at line 1337 of file unordered_map.h.

4.1029.3.7 template<class _Key , class _Tp , class _Hash , class _Pred , class _Alloc > std::unordered_multimap< _Key, _Tp, _Hash, _Pred, _Alloc >::unordered_multimap (initializer_list< value_type > *__l,* size_type *__n =* 0, const hasher & *__hf =* hasher (), const key_equal & *__eql =* key_equal (), const allocator_type & *__a =* allocator_type ()) [inline]

Builds an unordered_multimap from an initializer_list.

Parameters

__l	An initializer_list.
__n	Minimal initial number of buckets.
__hf	A hash functor.
__eql	A key equality functor.
__a	An allocator object.

Create an unordered_multimap consisting of copies of the elements in the list. This is linear in N (where N is *__l.size()*).

Definition at line 1372 of file unordered_map.h.

4.1029.4 Member Function Documentation

4.1029.4.1 template<class _Key , class _Tp , class _Hash , class _Pred , class _Alloc > iterator std::unordered_multimap< _Key, _Tp, _Hash, _Pred, _Alloc >::begin ( ) [inline], [noexcept]

Returns a read/write iterator that points to the first element in the unordered_multimap.

Definition at line 1470 of file unordered_map.h.

4.1029.4.2 template<class _Key , class _Tp , class _Hash , class _Pred , class _Alloc > const_iterator std::unordered_multimap< _Key, _Tp, _Hash, _Pred, _Alloc >::begin ( ) const [inline], [noexcept]

Returns a read-only (constant) iterator that points to the first element in the unordered_multimap.

Definition at line 1479 of file unordered_map.h.

4.1029.4.3 template<class _Key , class _Tp , class _Hash , class _Pred , class _Alloc > local_iterator std::unordered_multimap< _Key, _Tp, _Hash, _Pred, _Alloc >::begin (size_type __n) [inline]

Returns a read/write iterator pointing to the first bucket element.

Parameters

__n	The bucket index.

Returns

A read/write local iterator.

Definition at line 1895 of file unordered_map.h.

4.1029.4.4 template<class _Key , class _Tp , class _Hash , class _Pred , class _Alloc > const_local_iterator std::unordered_multimap< _Key, _Tp, _Hash, _Pred, _Alloc >::begin (size_type __n) const [inline]

Returns a read-only (constant) iterator pointing to the first bucket element.

Parameters

__n	The bucket index.

Returns

A read-only local iterator.

Definition at line 1906 of file unordered_map.h.

4.1029.4.5 template<class _Key , class _Tp , class _Hash , class _Pred , class _Alloc > size_type std::unordered_multimap< _Key, _Tp, _Hash, _Pred, _Alloc >::bucket_count ( ) const [inline], [noexcept]

Returns the number of buckets of the unordered_multimap.

Definition at line 1862 of file unordered_map.h.

4.1029.4.6 template<class _Key , class _Tp , class _Hash , class _Pred , class _Alloc > const_iterator std::unordered_multimap< _Key, _Tp, _Hash, _Pred, _Alloc >::cbegin ( ) const [inline], [noexcept]

Returns a read-only (constant) iterator that points to the first element in the unordered_multimap.

Definition at line 1483 of file unordered_map.h.

4.1029.4.7 template<class _Key , class _Tp , class _Hash , class _Pred , class _Alloc > const_local_iterator std::unordered_multimap< _Key, _Tp, _Hash, _Pred, _Alloc >::cbegin (size_type __n) const [inline]

Returns a read-only (constant) iterator pointing to the first bucket element.

Parameters

__n	The bucket index.

Returns

A read-only local iterator.

Definition at line 1910 of file unordered_map.h.

4.1029.4.8 template<class _Key , class _Tp , class _Hash , class _Pred , class _Alloc > const_iterator std::unordered_multimap< _Key, _Tp, _Hash, _Pred, _Alloc >::cend ( ) const [inline], [noexcept]

Returns a read-only (constant) iterator that points one past the last element in the unordered_multimap.

Definition at line 1505 of file unordered_map.h.

4.1029.4.9 template<class _Key , class _Tp , class _Hash , class _Pred , class _Alloc > const_local_iterator std::unordered_multimap< _Key, _Tp, _Hash, _Pred, _Alloc >::cend (size_type __n) const [inline]

Returns a read-only (constant) iterator pointing to one past the last bucket elements.

Parameters

__n	The bucket index.

Returns

A read-only local iterator.

Definition at line 1936 of file unordered_map.h.

4.1029.4.10 template<class _Key , class _Tp , class _Hash , class _Pred , class _Alloc > void std::unordered_multimap< _Key, _Tp, _Hash, _Pred, _Alloc >::clear ( ) [inline], [noexcept]

Erases all elements in an unordered_multimap. Note that this function only erases the elements, and that if the elements themselves are pointers, the pointed-to memory is not touched in any way. Managing the pointer is the user's responsibility.

Definition at line 1734 of file unordered_map.h.

4.1029.4.11 template<class _Key , class _Tp , class _Hash , class _Pred , class _Alloc > size_type std::unordered_multimap< _Key, _Tp, _Hash, _Pred, _Alloc >::count (const key_type & __x) const [inline]

Finds the number of elements.

Parameters

__x	Key to count.

Returns

Number of elements with specified key.

Definition at line 1828 of file unordered_map.h.

4.1029.4.12 template<class _Key , class _Tp , class _Hash , class _Pred , class _Alloc > template<typename... _Args> iterator std::unordered_multimap< _Key, _Tp, _Hash, _Pred, _Alloc >::emplace (_Args &&... *__args*) [inline]

Attempts to build and insert a std::pair into the unordered_multimap.

Parameters

__args	Arguments used to generate a new pair instance (see std::piecewise_contruct for passing arguments to each part of the pair constructor).

Returns

An iterator that points to the inserted pair.

This function attempts to build and insert a (key, value) pair into the unordered_multimap.

Insertion requires amortized constant time.

Definition at line 1528 of file unordered_map.h.

4.1029.4.13 template<class _Key , class _Tp , class _Hash , class _Pred , class _Alloc > template<typename... _Args> iterator std::unordered_multimap< _Key, _Tp, _Hash, _Pred, _Alloc >::emplace_hint (const_iterator *__pos,* _Args &&... *__args*) [inline]

Attempts to build and insert a std::pair into the unordered_multimap.

Parameters

__pos	An iterator that serves as a hint as to where the pair should be inserted.
__args	Arguments used to generate a new pair instance (see std::piecewise_contruct for passing arguments to each part of the pair constructor).

Returns

An iterator that points to the element with key of the std::pair built from *__args*.

Note that the first parameter is only a hint and can potentially improve the performance of the insertion process. A bad hint would cause no gains in efficiency.

See https://gcc.gnu.org/onlinedocs/libstdc++/manual/associative.html#containers.associative.insert_hints for more on *hinting*.

Insertion requires amortized constant time.

Definition at line 1555 of file unordered_map.h.

4.1029.4.14 template<class _Key , class _Tp , class _Hash , class _Pred , class _Alloc > bool std::unordered_multimap< _Key, _Tp, _Hash, _Pred, _Alloc >::empty ( ) const [inline], [noexcept]

Returns true if the unordered_multimap is empty.

Definition at line 1450 of file unordered_map.h.

4.1029.4.15 template<class _Key , class _Tp , class _Hash , class _Pred , class _Alloc > iterator std::unordered_multimap< _Key, _Tp, _Hash, _Pred, _Alloc >::end ( ) [inline], [noexcept]

Returns a read/write iterator that points one past the last element in the unordered_multimap.

Definition at line 1492 of file unordered_map.h.

4.1029.4.16 template<class _Key , class _Tp , class _Hash , class _Pred , class _Alloc > const_iterator std::unordered_multimap< _Key, _Tp, _Hash, _Pred, _Alloc >::end ( ) const [inline], [noexcept]

Returns a read-only (constant) iterator that points one past the last element in the unordered_multimap.

Definition at line 1501 of file unordered_map.h.

4.1029.4.17 template<class _Key , class _Tp , class _Hash , class _Pred , class _Alloc > local_iterator std::unordered_multimap< _Key, _Tp, _Hash, _Pred, _Alloc >::end (size_type __n) [inline]

Returns a read/write iterator pointing to one past the last bucket elements.

Parameters

__n	The bucket index.

Returns

A read/write local iterator.

Definition at line 1921 of file unordered_map.h.

4.1029.4.18 template<class _Key , class _Tp , class _Hash , class _Pred , class _Alloc > const_local_iterator std::unordered_multimap< _Key, _Tp, _Hash, _Pred, _Alloc >::end (size_type __n) const [inline]

Returns a read-only (constant) iterator pointing to one past the last bucket elements.

Parameters

__n	The bucket index.

Returns

A read-only local iterator.

Definition at line 1932 of file unordered_map.h.

4.1029.4.19 template<class _Key , class _Tp , class _Hash , class _Pred , class _Alloc > std::pair<iterator, iterator> std::unordered_multimap< _Key, _Tp, _Hash, _Pred, _Alloc >::equal_range (const key_type & __x) [inline]

Finds a subsequence matching given key.

Parameters

__x	Key to be located.

Returns

Pair of iterators that possibly points to the subsequence matching given key.

Definition at line 1850 of file unordered_map.h.

4.1029.4.20 template<class _Key , class _Tp , class _Hash , class _Pred , class _Alloc > std::pair<const_iterator, const_iterator> std::unordered_multimap< _Key, _Tp, _Hash, _Pred, _Alloc >::equal_range (const key_type & __x) const [inline]

Finds a subsequence matching given key.

Parameters

__x	Key to be located.

Returns

Pair of iterators that possibly points to the subsequence matching given key.

Definition at line 1854 of file unordered_map.h.

4.1029.4.21 template<class _Key , class _Tp , class _Hash , class _Pred , class _Alloc > iterator std::unordered_multimap< _Key, _Tp, _Hash, _Pred, _Alloc >::erase (const_iterator *__position*) [inline]

Erases an element from an unordered_multimap.

Parameters

__position	An iterator pointing to the element to be erased.

Returns

An iterator pointing to the element immediately following *__position* prior to the element being erased. If no such element exists, end() is returned.

This function erases an element, pointed to by the given iterator, from an unordered_multimap. Note that this function only erases the element, and that if the element is itself a pointer, the pointed-to memory is not touched in any way. Managing the pointer is the user's responsibility.

Definition at line 1684 of file unordered_map.h.

4.1029.4.22 template<class _Key , class _Tp , class _Hash , class _Pred , class _Alloc > iterator std::unordered_multimap< _Key, _Tp, _Hash, _Pred, _Alloc >::erase (iterator *__position*) [inline]

Erases an element from an unordered_multimap.

Parameters

__position	An iterator pointing to the element to be erased.

Returns

An iterator pointing to the element immediately following *__position* prior to the element being erased. If no such element exists, end() is returned.

This function erases an element, pointed to by the given iterator, from an unordered_multimap. Note that this function only erases the element, and that if the element is itself a pointer, the pointed-to memory is not touched in any way. Managing the pointer is the user's responsibility.

Definition at line 1689 of file unordered_map.h.

4.1029.4.23 template<class _Key , class _Tp , class _Hash , class _Pred , class _Alloc > size_type std::unordered_multimap< _Key, _Tp, _Hash, _Pred, _Alloc >::erase (const key_type & *__x*) [inline]

Erases elements according to the provided key.

Parameters

__x	Key of elements to be erased.

Returns

The number of elements erased.

This function erases all the elements located by the given key from an unordered_multimap. Note that this function only erases the element, and that if the element is itself a pointer, the pointed-to memory is not touched in any way. Managing the pointer is the user's responsibility.

Definition at line 1705 of file unordered_map.h.

4.1029.4.24 template<class _Key , class _Tp , class _Hash , class _Pred , class _Alloc > iterator std::unordered_multimap< _Key, _Tp, _Hash, _Pred, _Alloc >::erase (const_iterator *__first,* const_iterator *__last*) [inline]

Erases a [__first,__last) range of elements from an unordered_multimap.

Parameters

__first	Iterator pointing to the start of the range to be erased.
__last	Iterator pointing to the end of the range to be erased.

Returns

The iterator *__last*.

This function erases a sequence of elements from an unordered_multimap. Note that this function only erases the elements, and that if the element is itself a pointer, the pointed-to memory is not touched in any way. Managing the pointer is the user's responsibility.

Definition at line 1724 of file unordered_map.h.

4.1029.4.25 template<class _Key , class _Tp , class _Hash , class _Pred , class _Alloc > iterator std::unordered_multimap< _Key, _Tp, _Hash, _Pred, _Alloc >::find (const key_type & *__x*) [inline]

Tries to locate an element in an unordered_multimap.

Parameters

__x	Key to be located.

Returns

Iterator pointing to sought-after element, or end() if not found.

This function takes a key and tries to locate the element with which the key matches. If successful the function returns an iterator pointing to the sought after element. If unsuccessful it returns the past-the-end (`end()`) iterator.

Definition at line 1814 of file unordered_map.h.

4.1029.4.26 template<class _Key , class _Tp , class _Hash , class _Pred , class _Alloc > const_iterator std::unordered_multimap< _Key, _Tp, _Hash, _Pred, _Alloc >::find (const key_type & *__x*) const [inline]

Tries to locate an element in an unordered_multimap.

Parameters

__x	Key to be located.

Returns

Iterator pointing to sought-after element, or end() if not found.

This function takes a key and tries to locate the element with which the key matches. If successful the function returns an iterator pointing to the sought after element. If unsuccessful it returns the past-the-end (`end()`) iterator.

Definition at line 1818 of file unordered_map.h.

4.1029.4.27 template<class _Key , class _Tp , class _Hash , class _Pred , class _Alloc > allocator_type std::unordered_multimap< _Key, _Tp, _Hash, _Pred, _Alloc >::get_allocator ( ) const [inline], [noexcept]

Returns the allocator object used by the unordered_multimap.

Definition at line 1443 of file unordered_map.h.

4.1029.4.28 template<class _Key , class _Tp , class _Hash , class _Pred , class _Alloc > hasher std::unordered_multimap< _Key, _Tp, _Hash, _Pred, _Alloc >::hash_function ( ) const [inline]

Returns the hash functor object with which the unordered_multimap was constructed.

Definition at line 1790 of file unordered_map.h.

4.1029.4.29 template<class _Key , class _Tp , class _Hash , class _Pred , class _Alloc > iterator std::unordered_multimap< _Key, _Tp, _Hash, _Pred, _Alloc >::insert (const value_type & *__x*) [inline]

Inserts a std::pair into the unordered_multimap.

Parameters

__x	Pair to be inserted (see std::make_pair for easy creation of pairs).

Returns

An iterator that points to the inserted pair.

Insertion requires amortized constant time.

Definition at line 1569 of file unordered_map.h.

4.1029.4.30 template<class _Key , class _Tp , class _Hash , class _Pred , class _Alloc > iterator std::unordered_multimap< _Key, _Tp, _Hash, _Pred, _Alloc >::insert (value_type && *__x*) [inline]

Inserts a std::pair into the unordered_multimap.

Parameters

__x	Pair to be inserted (see std::make_pair for easy creation of pairs).

Returns

An iterator that points to the inserted pair.

Insertion requires amortized constant time.

Definition at line 1573 of file unordered_map.h.

References std::move().

4.1029.4.31 template<class _Key , class _Tp , class _Hash , class _Pred , class _Alloc > template<typename _Pair > __enable_if_t<is_constructible<value_type, _Pair&&>::value, iterator> std::unordered_multimap< _Key, _Tp, _Hash, _Pred, _Alloc >::insert (_Pair && __x) [inline]

Inserts a std::pair into the unordered_multimap.

Parameters

__x	Pair to be inserted (see std::make_pair for easy creation of pairs).

Returns

An iterator that points to the inserted pair.

Insertion requires amortized constant time.

Definition at line 1578 of file unordered_map.h.

4.1029.4.32 template<class _Key , class _Tp , class _Hash , class _Pred , class _Alloc > iterator std::unordered_multimap< _Key, _Tp, _Hash, _Pred, _Alloc >::insert (const_iterator *__hint*, const value_type & *__x*) [inline]

Inserts a std::pair into the unordered_multimap.

Parameters

__hint	An iterator that serves as a hint as to where the pair should be inserted.
__x	Pair to be inserted (see std::make_pair for easy creation of pairs).

Returns

An iterator that points to the element with key of *__x* (may or may not be the pair passed in).

Note that the first parameter is only a hint and can potentially improve the performance of the insertion process. A bad hint would cause no gains in efficiency.

See https://gcc.gnu.org/onlinedocs/libstdc++/manual/associative.html#containers.associative.insert_hints for more on *hinting*.

Insertion requires amortized constant time.

Definition at line 1603 of file unordered_map.h.

4.1029.4.33 template<class _Key , class _Tp , class _Hash , class _Pred , class _Alloc > iterator std::unordered_multimap< _Key, _Tp, _Hash, _Pred, _Alloc >::insert (const_iterator *__hint*, value_type && *__x*) [inline]

Inserts a std::pair into the unordered_multimap.

Parameters

__hint	An iterator that serves as a hint as to where the pair should be inserted.
__x	Pair to be inserted (see std::make_pair for easy creation of pairs).

Returns

An iterator that points to the element with key of *__x* (may or may not be the pair passed in).

Note that the first parameter is only a hint and can potentially improve the performance of the insertion process. A bad hint would cause no gains in efficiency.

See https://gcc.gnu.org/onlinedocs/libstdc++/manual/associative.html#containers.associative.insert_hints for more on *hinting*.

Insertion requires amortized constant time.

Definition at line 1609 of file unordered_map.h.

References std::move().

4.1029.4.34 template<class _Key , class _Tp , class _Hash , class _Pred , class _Alloc > template<typename _Pair > __enable_if_t<is_constructible<value_type, _Pair&&>::value, iterator> std::unordered_multimap< _Key, _Tp, _Hash, _Pred, _Alloc >::insert (const_iterator *__hint*, _Pair && *__x*) [inline]

Inserts a std::pair into the unordered_multimap.

Parameters

__hint	An iterator that serves as a hint as to where the pair should be inserted.
__x	Pair to be inserted (see std::make_pair for easy creation of pairs).

Returns

An iterator that points to the element with key of *__x* (may or may not be the pair passed in).

Note that the first parameter is only a hint and can potentially improve the performance of the insertion process. A bad hint would cause no gains in efficiency.

See https://gcc.gnu.org/onlinedocs/libstdc++/manual/associative.html#containers.associative.insert_hints for more on *hinting*.

Insertion requires amortized constant time.

Definition at line 1614 of file unordered_map.h.

4.1029.4.35 template<class _Key , class _Tp , class _Hash , class _Pred , class _Alloc > template<typename _InputIterator > void std::unordered_multimap< _Key, _Tp, _Hash, _Pred, _Alloc >::insert (_InputIterator *__first*, _InputIterator *__last*) [inline]

A template function that attempts to insert a range of elements.

Parameters

__first	Iterator pointing to the start of the range to be inserted.
__last	Iterator pointing to the end of the range.

Complexity similar to that of the range constructor.

Definition at line 1629 of file unordered_map.h.

4.1029.4.36 template<class _Key , class _Tp , class _Hash , class _Pred , class _Alloc > void std::unordered_multimap< _Key, _Tp, _Hash, _Pred, _Alloc >::insert (initializer_list< value_type > *__l*) [inline]

Attempts to insert a list of elements into the unordered_multimap.

Parameters

__l	A std::initializer_list<value_type> of elements to be inserted.

Complexity similar to that of the range constructor.

Definition at line 1641 of file unordered_map.h.

4.1029.4.37 template<class _Key , class _Tp , class _Hash , class _Pred , class _Alloc > key_equal std::unordered_multimap< _Key, _Tp, _Hash, _Pred, _Alloc >::key_eq ( ) const [inline]

Returns the key comparison object with which the unordered_multimap was constructed.

Definition at line 1796 of file unordered_map.h.

4.1029.4.38 template<class _Key , class _Tp , class _Hash , class _Pred , class _Alloc > float std::unordered_multimap< _Key, _Tp, _Hash, _Pred, _Alloc >::load_factor ( ) const [inline], [noexcept]

Returns the average number of elements per bucket.

Definition at line 1944 of file unordered_map.h.

4.1029.4.39 template<class _Key , class _Tp , class _Hash , class _Pred , class _Alloc > size_type std::unordered_multimap< _Key, _Tp, _Hash, _Pred, _Alloc >::max_bucket_count ( ) const [inline], [noexcept]

Returns the maximum number of buckets of the unordered_multimap.

Definition at line 1867 of file unordered_map.h.

4.1029.4.40 template<class _Key , class _Tp , class _Hash , class _Pred , class _Alloc > float std::unordered_multimap< _Key, _Tp, _Hash, _Pred, _Alloc >::max_load_factor ( ) const [inline], [noexcept]

Returns a positive number that the unordered_multimap tries to keep the load factor less than or equal to.

Definition at line 1950 of file unordered_map.h.

4.1029.4.41 template<class _Key , class _Tp , class _Hash , class _Pred , class _Alloc > void std::unordered_multimap< _Key, _Tp, _Hash, _Pred, _Alloc >::max_load_factor (float __z) [inline]

Change the unordered_multimap maximum load factor.

Parameters

__z	The new maximum load factor.

Definition at line 1958 of file unordered_map.h.

4.1029.4.42 template<class _Key , class _Tp , class _Hash , class _Pred , class _Alloc > size_type std::unordered_multimap< _Key, _Tp, _Hash, _Pred, _Alloc >::max_size ( ) const [inline], [noexcept]

Returns the maximum size of the unordered_multimap.

Definition at line 1460 of file unordered_map.h.

4.1029.4.43 template<class _Key , class _Tp , class _Hash , class _Pred , class _Alloc > unordered_multimap& std::unordered_multimap< _Key, _Tp, _Hash, _Pred, _Alloc >::operator= (const unordered_multimap< _Key, _Tp, _Hash, _Pred, _Alloc > &) [default]

Copy assignment operator.

4.1029.4.44 template<class _Key , class _Tp , class _Hash , class _Pred , class _Alloc > unordered_multimap& std::unordered_multimap< _Key, _Tp, _Hash, _Pred, _Alloc >::operator= (unordered_multimap< _Key, _Tp, _Hash, _Pred, _Alloc > &&) [default]

Move assignment operator.

4.1029.4.45 template<class _Key , class _Tp , class _Hash , class _Pred , class _Alloc > unordered_multimap& std::unordered_multimap< _Key, _Tp, _Hash, _Pred, _Alloc >::operator= (initializer_list< value_type > __l) [inline]

Unordered_multimap list assignment operator.

Parameters

__l	An initializer_list.

This function fills an unordered_multimap with copies of the elements in the initializer list *__l*.

Note that the assignment completely changes the unordered_multimap and that the resulting unordered_multimap's size is the same as the number of elements assigned.

Definition at line 1435 of file unordered_map.h.

4.1029.4.46 template<class _Key , class _Tp , class _Hash , class _Pred , class _Alloc > void std::unordered_multimap< _Key, _Tp, _Hash, _Pred, _Alloc >::rehash (size_type *__n*) [inline]

May rehash the unordered_multimap.

Parameters

__n	The new number of buckets.

Rehash will occur only if the new number of buckets respect the unordered_multimap maximum load factor.

Definition at line 1969 of file unordered_map.h.

4.1029.4.47 template<class _Key , class _Tp , class _Hash , class _Pred , class _Alloc > void std::unordered_multimap< _Key, _Tp, _Hash, _Pred, _Alloc >::reserve (size_type *__n*) [inline]

Prepare the unordered_multimap for a specified number of elements.

Parameters

__n	Number of elements required.

Same as rehash(ceil(n / max_load_factor())).

Definition at line 1980 of file unordered_map.h.

4.1029.4.48 template<class _Key , class _Tp , class _Hash , class _Pred , class _Alloc > size_type std::unordered_multimap< _Key, _Tp, _Hash, _Pred, _Alloc >::size ( ) const [inline], [noexcept]

Returns the size of the unordered_multimap.

Definition at line 1455 of file unordered_map.h.

4.1029.4.49 template<class _Key , class _Tp , class _Hash , class _Pred , class _Alloc > void std::unordered_multimap< _Key, _Tp, _Hash, _Pred, _Alloc >::swap (unordered_multimap< _Key, _Tp, _Hash, _Pred, _Alloc > & *__x*) [inline], [noexcept]

Swaps data with another unordered_multimap.

Parameters

__x	An unordered_multimap of the same element and allocator types.

This exchanges the elements between two unordered_multimap in constant time. Note that the global std::swap() function is specialized such that std::swap(m1,m2) will feed to this function.

Definition at line 1748 of file unordered_map.h.

4.1030.1 Detailed Description

template<typename _Key, typename _Tp, typename _Hash, typename _Pred, typename _Allocator>class std::__debug::unordered_multimap< _Key, _Tp, _Hash, _Pred, _Allocator >

Class std::unordered_multimap with safety/checking/debug instrumentation.

Definition at line 44 of file debug/unordered_map.

4.1030.2 Member Function Documentation

4.1030.2.1 void __gnu_debug::_Safe_unordered_container_base::_M_detach_all ( ) [protected], [inherited]

Detach all iterators, leaving them singular.

4.1030.2.2 void __gnu_debug::_Safe_sequence_base::_M_detach_singular ( ) [protected], [inherited]

Detach all singular iterators.

Postcondition

for all iterators i attached to this sequence, i->_M_version == _M_version.

4.1030.2.3 __gnu_cxx::__mutex& __gnu_debug::_Safe_sequence_base::_M_get_mutex ( ) throw) [protected], [inherited]

For use in _Safe_sequence.

Referenced by __gnu_debug::_Safe_sequence< _Sequence >::_M_transfer_from_if().

4.1030.2.4 void __gnu_debug::_Safe_sequence_base::_M_invalidate_all ( ) const [inline], [protected], [inherited]

Invalidates all iterators.

Definition at line 256 of file safe_base.h.

References __gnu_debug::_Safe_sequence_base::_M_version.

4.1030.2.5 void __gnu_debug::_Safe_unordered_container< unordered_multimap< _Key, _Tp, _Hash, _Pred, _Alloc > >::_M_invalidate_if (_Predicate *__pred*) [protected], [inherited]

Invalidates all iterators `x` that reference this container, are not singular, and for which `__pred(x)` returns `true`. `__pred` will be invoked with the normal iterators nested in the safe ones.

4.1030.2.6 void __gnu_debug::_Safe_unordered_container< unordered_multimap< _Key, _Tp, _Hash, _Pred, _Alloc > >::_M_invalidate_local_if (_Predicate *__pred*) [protected], [inherited]

Invalidates all local iterators `x` that reference this container, are not singular, and for which `__pred(x)` returns `true`. `__pred` will be invoked with the normal local iterators nested in the safe ones.

4.1030.2.7 void __gnu_debug::_Safe_sequence_base::_M_revalidate_singular ( ) [protected], [inherited]

Revalidates all attached singular iterators. This method may be used to validate iterators that were invalidated before (but for some reason, such as an exception, need to become valid again).

4.1030.2.8 void __gnu_debug::_Safe_unordered_container_base::_M_swap (_Safe_unordered_container_base & __x) [protected], [noexcept], [inherited]

Swap this container with the given container. This operation also swaps ownership of the iterators, so that when the operation is complete all iterators that originally referenced one container now reference the other container.

4.1030.2.9 void __gnu_debug::_Safe_sequence_base::_M_swap (_Safe_sequence_base & __x) [protected], [noexcept], [inherited]

Swap this sequence with the given sequence. This operation also swaps ownership of the iterators, so that when the operation is complete all iterators that originally referenced one container now reference the other container.

4.1030.3 Member Data Documentation

4.1030.3.1 _Safe_iterator_base* __gnu_debug::_Safe_sequence_base::_M_const_iterators [inherited]

The list of constant iterators that reference this container.

Definition at line 197 of file safe_base.h.

Referenced by __gnu_debug::_Safe_sequence< _Sequence >::_M_transfer_from_if().

4.1030.3.2 _Safe_iterator_base* __gnu_debug::_Safe_unordered_container_base::_M_const_local_iterators [inherited]

The list of constant local iterators that reference this container.

Definition at line 130 of file safe_unordered_base.h.

4.1030.3.3 _Safe_iterator_base* __gnu_debug::_Safe_sequence_base::_M_iterators [inherited]

The list of mutable iterators that reference this container.

Definition at line 194 of file safe_base.h.

Referenced by __gnu_debug::_Safe_sequence< _Sequence >::_M_transfer_from_if().

4.1030.3.4 _Safe_iterator_base* __gnu_debug::_Safe_unordered_container_base::_M_local_iterators [inherited]

The list of mutable local iterators that reference this container.

Definition at line 127 of file safe_unordered_base.h.

4.1030.3.5 unsigned int __gnu_debug::_Safe_sequence_base::_M_version [mutable], [inherited]

The container version number. This number may never be 0.

Definition at line 200 of file safe_base.h.

Referenced by __gnu_debug::_Safe_sequence_base::_M_invalidate_all().

4.1031.1 Detailed Description

template<class _Value, class _Hash, class _Pred, class _Alloc>class std::unordered_multiset< _Value, _Hash, _Pred, _Alloc >

A standard container composed of equivalent keys (possibly containing multiple of each key value) in which the elements' keys are the elements themselves.

Template Parameters

_Value	Type of key objects.
_Hash	Hashing function object type, defaults to hash<_Value>.
_Pred	Predicate function object type, defaults to equal_to<_Value>.
_Alloc	Allocator type, defaults to allocator<_Key>.

Meets the requirements of a container, and unordered associative container

Base is _Hashtable, dispatched at compile time via template alias __umset_hashtable.

Definition at line 70 of file unordered_set.h.

4.1031.3 Constructor & Destructor Documentation

4.1031.3.1 template<class _Value , class _Hash , class _Pred , class _Alloc > std::unordered_multiset< _Value, _Hash, _Pred, _Alloc >::unordered_multiset ( ) [default]

Default constructor.

4.1031.3.2 template<class _Value , class _Hash , class _Pred , class _Alloc > std::unordered_multiset< _Value, _Hash, _Pred, _Alloc >::unordered_multiset (size_type *__n,* const hasher & *__hf* = hasher (), const key_equal & *__eql* = key_equal (), const allocator_type & *__a* = allocator_type ()) [inline], [explicit]

Default constructor creates no elements.

Parameters

__n	Minimal initial number of buckets.
__hf	A hash functor.
__eql	A key equality functor.
__a	An allocator object.

Definition at line 959 of file unordered_set.h.

4.1031.3.3 template<class _Value , class _Hash , class _Pred , class _Alloc > template<typename _InputIterator > std::unordered_multiset< _Value, _Hash, _Pred, _Alloc >::unordered_multiset (_InputIterator *__first,* _InputIterator *__last,* size_type *__n* = 0, const hasher & *__hf* = hasher (), const key_equal & *__eql* = key_equal (), const allocator_type & *__a* = allocator_type ()) [inline]

Builds an unordered_multiset from a range.

Parameters

__first	An input iterator.
__last	An input iterator.
__n	Minimal initial number of buckets.
__hf	A hash functor.
__eql	A key equality functor.
__a	An allocator object.

Create an unordered_multiset consisting of copies of the elements from [__first,__last). This is linear in N (where N is distance(__first,__last)).

Definition at line 980 of file unordered_set.h.

4.1031.3.4 template<class _Value , class _Hash , class _Pred , class _Alloc > std::unordered_multiset< _Value, _Hash, _Pred, _Alloc >::unordered_multiset (const unordered_multiset< _Value, _Hash, _Pred, _Alloc > &) [default]

Copy constructor.

4.1031.3.5 template<class _Value , class _Hash , class _Pred , class _Alloc > std::unordered_multiset< _Value, _Hash, _Pred, _Alloc >::unordered_multiset (unordered_multiset< _Value, _Hash, _Pred, _Alloc > &&) [default]

Move constructor.

4.1031.3.6 template<class _Value , class _Hash , class _Pred , class _Alloc > std::unordered_multiset< _Value, _Hash, _Pred, _Alloc >::unordered_multiset (initializer_list< value_type > __l, size_type __n = 0, const hasher & __hf = hasher (), const key_equal & __eql = key_equal (), const allocator_type & __a = allocator_type ()) [inline]

Builds an unordered_multiset from an initializer_list.

Parameters

__l	An initializer_list.
__n	Minimal initial number of buckets.
__hf	A hash functor.
__eql	A key equality functor.
__a	An allocator object.

Create an unordered_multiset consisting of copies of the elements in the list. This is linear in N (where N is *__l.size()*).

Definition at line 1005 of file unordered_set.h.

4.1031.3.7 template<class _Value , class _Hash , class _Pred , class _Alloc > std::unordered_multiset< _Value, _Hash, _Pred, _Alloc >::unordered_multiset (const allocator_type & __a) [inline], [explicit]

Creates an unordered_multiset with no elements.

Parameters

__a	An allocator object.

Definition at line 1026 of file unordered_set.h.

4.1031.4 Member Function Documentation

4.1031.4.1 template<class _Value , class _Hash , class _Pred , class _Alloc > iterator std::unordered_multiset< _Value, _Hash, _Pred, _Alloc >::begin ( ) [inline], [noexcept]

Returns a read-only (constant) iterator that points to the first element in the unordered_multiset.

Definition at line 1133 of file unordered_set.h.

4.1031.4.2 template<class _Value , class _Hash , class _Pred , class _Alloc > const_iterator std::unordered_multiset< _Value, _Hash, _Pred, _Alloc >::begin ( ) const [inline], [noexcept]

Returns a read-only (constant) iterator that points to the first element in the unordered_multiset.

Definition at line 1137 of file unordered_set.h.

4.1031.4.3 template<class _Value , class _Hash , class _Pred , class _Alloc > local_iterator std::unordered_multiset< _Value, _Hash, _Pred, _Alloc >::begin (size_type __n) [inline]

Returns a read-only (constant) iterator pointing to the first bucket element.

Parameters

__n	The bucket index.

Returns

A read-only local iterator.

Definition at line 1530 of file unordered_set.h.

4.1031.4.4 template<class _Value , class _Hash , class _Pred , class _Alloc > const_local_iterator std::unordered_multiset< _Value, _Hash, _Pred, _Alloc >::begin (size_type __n) const [inline]

Returns a read-only (constant) iterator pointing to the first bucket element.

Parameters

__n	The bucket index.

Returns

A read-only local iterator.

Definition at line 1534 of file unordered_set.h.

4.1031.4.5 template<class _Value , class _Hash , class _Pred , class _Alloc > size_type std::unordered_multiset< _Value, _Hash, _Pred, _Alloc >::bucket_count ( ) const [inline], [noexcept]

Returns the number of buckets of the unordered_multiset.

Definition at line 1496 of file unordered_set.h.

4.1031.4.6 template<class _Value , class _Hash , class _Pred , class _Alloc > const_iterator std::unordered_multiset< _Value, _Hash, _Pred, _Alloc >::cbegin ( ) const [inline], [noexcept]

Returns a read-only (constant) iterator that points to the first element in the unordered_multiset.

Definition at line 1160 of file unordered_set.h.

4.1031.4.7 template<class _Value , class _Hash , class _Pred , class _Alloc > const_local_iterator std::unordered_multiset< _Value, _Hash, _Pred, _Alloc >::cbegin (size_type __n) const [inline]

Returns a read-only (constant) iterator pointing to the first bucket element.

Parameters

__n	The bucket index.

Returns

A read-only local iterator.

Definition at line 1538 of file unordered_set.h.

4.1031.4.8 template<class _Value , class _Hash , class _Pred , class _Alloc > const_iterator std::unordered_multiset< _Value, _Hash, _Pred, _Alloc >::cend ( ) const [inline], [noexcept]

Returns a read-only (constant) iterator that points one past the last element in the unordered_multiset.

Definition at line 1168 of file unordered_set.h.

4.1031.4.9 template<class _Value , class _Hash , class _Pred , class _Alloc > const_local_iterator std::unordered_multiset< _Value, _Hash, _Pred, _Alloc >::cend (size_type __n) const [inline]

Returns a read-only (constant) iterator pointing to one past the last bucket elements.

Parameters

__n	The bucket index.

Returns

A read-only local iterator.

Definition at line 1558 of file unordered_set.h.

4.1031.4.10 template<class _Value , class _Hash , class _Pred , class _Alloc > void std::unordered_multiset< _Value, _Hash, _Pred, _Alloc >::clear ( ) [inline], [noexcept]

Erases all elements in an unordered_multiset.

Note that this function only erases the elements, and that if the elements themselves are pointers, the pointed-to memory is not touched in any way. Managing the pointer is the user's responsibility.

Definition at line 1369 of file unordered_set.h.

4.1031.4.11 template<class _Value , class _Hash , class _Pred , class _Alloc > size_type std::unordered_multiset< _Value, _Hash, _Pred, _Alloc >::count (const key_type & *__x*) const [inline]

Finds the number of elements.

Parameters

__x	Element to located.

Returns

Number of elements with specified key.

Definition at line 1462 of file unordered_set.h.

4.1031.4.12 template<class _Value , class _Hash , class _Pred , class _Alloc > template<typename... _Args> iterator std::unordered_multiset< _Value, _Hash, _Pred, _Alloc >::emplace (_Args &&... *__args*) [inline]

Builds and insert an element into the unordered_multiset.

Parameters

__args	Arguments used to generate an element.

Returns

An iterator that points to the inserted element.

Insertion requires amortized constant time.

Definition at line 1182 of file unordered_set.h.

4.1031.4.13 template<class _Value , class _Hash , class _Pred , class _Alloc > template<typename... _Args> iterator std::unordered_multiset< _Value, _Hash, _Pred, _Alloc >::emplace_hint (const_iterator *__pos,* _Args &&... *__args*) [inline]

Inserts an element into the unordered_multiset.

Parameters

__pos	An iterator that serves as a hint as to where the element should be inserted.
__args	Arguments used to generate the element to be inserted.

Returns

An iterator that points to the inserted element.

Note that the first parameter is only a hint and can potentially improve the performance of the insertion process. A bad hint would cause no gains in efficiency.

For more on *hinting*, see: https://gcc.gnu.org/onlinedocs/libstdc++/manual/associative.html#containers.associative.insert_hints

Insertion requires amortized constant time.

Definition at line 1204 of file unordered_set.h.

4.1031.4.14 template<class _Value , class _Hash , class _Pred , class _Alloc > bool std::unordered_multiset< _Value, _Hash, _Pred, _Alloc >::empty ( ) const [inline], [noexcept]

Returns true if the unordered_multiset is empty.

Definition at line 1112 of file unordered_set.h.

4.1031.4.15 template<class _Value , class _Hash , class _Pred , class _Alloc > iterator std::unordered_multiset< _Value, _Hash, _Pred, _Alloc >::end ( ) [inline], [noexcept]

Returns a read-only (constant) iterator that points one past the last element in the unordered_multiset.

Definition at line 1147 of file unordered_set.h.

4.1031.4.16 template<class _Value , class _Hash , class _Pred , class _Alloc > const_iterator std::unordered_multiset< _Value, _Hash, _Pred, _Alloc >::end ( ) const [inline], [noexcept]

Returns a read-only (constant) iterator that points one past the last element in the unordered_multiset.

Definition at line 1151 of file unordered_set.h.

4.1031.4.17 template<class _Value , class _Hash , class _Pred , class _Alloc > local_iterator std::unordered_multiset< _Value, _Hash, _Pred, _Alloc >::end (size_type __n) [inline]

Returns a read-only (constant) iterator pointing to one past the last bucket elements.

Parameters

__n	The bucket index.

Returns

A read-only local iterator.

Definition at line 1550 of file unordered_set.h.

4.1031.4.18 template<class _Value , class _Hash , class _Pred , class _Alloc > const_local_iterator std::unordered_multiset< _Value, _Hash, _Pred, _Alloc >::end (size_type __n) const [inline]

Returns a read-only (constant) iterator pointing to one past the last bucket elements.

Parameters

__n	The bucket index.

Returns

A read-only local iterator.

Definition at line 1554 of file unordered_set.h.

4.1031.4.19 template<class _Value , class _Hash , class _Pred , class _Alloc > std::pair<iterator, iterator> std::unordered_multiset< _Value, _Hash, _Pred, _Alloc >::equal_range (const key_type & *__x*) [inline]

Finds a subsequence matching given key.

Parameters

__x	Key to be located.

Returns

Pair of iterators that possibly points to the subsequence matching given key.

Definition at line 1484 of file unordered_set.h.

4.1031.4.20 template<class _Value , class _Hash , class _Pred , class _Alloc > std::pair<const_iterator, const_iterator> std::unordered_multiset< _Value, _Hash, _Pred, _Alloc >::equal_range (const key_type & *__x*) const [inline]

Finds a subsequence matching given key.

Parameters

__x	Key to be located.

Returns

Pair of iterators that possibly points to the subsequence matching given key.

Definition at line 1488 of file unordered_set.h.

4.1031.4.21 template<class _Value , class _Hash , class _Pred , class _Alloc > iterator std::unordered_multiset< _Value, _Hash, _Pred, _Alloc >::erase (const_iterator *__position*) [inline]

Erases an element from an unordered_multiset.

Parameters

__position	An iterator pointing to the element to be erased.

Returns

An iterator pointing to the element immediately following *__position* prior to the element being erased. If no such element exists, end() is returned.

This function erases an element, pointed to by the given iterator, from an unordered_multiset.

Note that this function only erases the element, and that if the element is itself a pointer, the pointed-to memory is not touched in any way. Managing the pointer is the user's responsibility.

Definition at line 1315 of file unordered_set.h.

4.1031.4.22 template<class _Value , class _Hash , class _Pred , class _Alloc > iterator std::unordered_multiset< _Value, _Hash, _Pred, _Alloc >::erase (iterator *__position*) [inline]

Erases an element from an unordered_multiset.

Parameters

__position	An iterator pointing to the element to be erased.

Returns

An iterator pointing to the element immediately following *__position* prior to the element being erased. If no such element exists, end() is returned.

This function erases an element, pointed to by the given iterator, from an unordered_multiset.

Note that this function only erases the element, and that if the element is itself a pointer, the pointed-to memory is not touched in any way. Managing the pointer is the user's responsibility.

Definition at line 1320 of file unordered_set.h.

4.1031.4.23 template<class _Value , class _Hash , class _Pred , class _Alloc > size_type std::unordered_multiset< _Value, _Hash, _Pred, _Alloc >::erase (const key_type & *__x*) [inline]

Erases elements according to the provided key.

Parameters

__x	Key of element to be erased.

Returns

The number of elements erased.

This function erases all the elements located by the given key from an unordered_multiset.

Note that this function only erases the element, and that if the element is itself a pointer, the pointed-to memory is not touched in any way. Managing the pointer is the user's responsibility.

Definition at line 1338 of file unordered_set.h.

4.1031.4.24 template<class _Value , class _Hash , class _Pred , class _Alloc > iterator std::unordered_multiset< _Value, _Hash, _Pred, _Alloc >::erase (const_iterator *__first,* const_iterator *__last*) [inline]

Erases a [__first,__last) range of elements from an unordered_multiset.

Parameters

__first	Iterator pointing to the start of the range to be erased.
__last	Iterator pointing to the end of the range to be erased.

Returns

The iterator *__last*.

This function erases a sequence of elements from an unordered_multiset.

Note that this function only erases the element, and that if the element is itself a pointer, the pointed-to memory is not touched in any way. Managing the pointer is the user's responsibility.

Definition at line 1358 of file unordered_set.h.

4.1031.4.25 template<class _Value , class _Hash , class _Pred , class _Alloc > iterator std::unordered_multiset< _Value, _Hash, _Pred, _Alloc >::find (const key_type & *__x*) [inline]

Tries to locate an element in an unordered_multiset.

Parameters

__x	Element to be located.

Returns

Iterator pointing to sought-after element, or end() if not found.

This function takes a key and tries to locate the element with which the key matches. If successful the function returns an iterator pointing to the sought after element. If unsuccessful it returns the past-the-end (`end()`) iterator.

Definition at line 1448 of file unordered_set.h.

4.1031.4.26 template<class _Value , class _Hash , class _Pred , class _Alloc > const_iterator std::unordered_multiset< _Value, _Hash, _Pred, _Alloc >::find (const key_type & *__x*) const [inline]

Tries to locate an element in an unordered_multiset.

Parameters

__x	Element to be located.

Returns

Iterator pointing to sought-after element, or end() if not found.

This function takes a key and tries to locate the element with which the key matches. If successful the function returns an iterator pointing to the sought after element. If unsuccessful it returns the past-the-end (`end()`) iterator.

Definition at line 1452 of file unordered_set.h.

4.1031.4.27 template<class _Value , class _Hash , class _Pred , class _Alloc > allocator_type std::unordered_multiset< _Value, _Hash, _Pred, _Alloc >::get_allocator ( ) const [inline], [noexcept]

Returns the allocator object used by the unordered_multiset.

Definition at line 1105 of file unordered_set.h.

4.1031.4.28 template<class _Value , class _Hash , class _Pred , class _Alloc > hasher std::unordered_multiset< _Value, _Hash, _Pred, _Alloc >::hash_function ( ) const [inline]

Returns the hash functor object with which the unordered_multiset was constructed.

Definition at line 1424 of file unordered_set.h.

4.1031.4.29 template<class _Value , class _Hash , class _Pred , class _Alloc > iterator std::unordered_multiset< _Value, _Hash, _Pred, _Alloc >::insert (const value_type & *__x*) [inline]

Inserts an element into the unordered_multiset.

Parameters

__x	Element to be inserted.

Returns

An iterator that points to the inserted element.

Insertion requires amortized constant time.

Definition at line 1216 of file unordered_set.h.

4.1031.4.30 template<class _Value , class _Hash , class _Pred , class _Alloc > iterator std::unordered_multiset< _Value, _Hash, _Pred, _Alloc >::insert (value_type && __x) [inline]

Inserts an element into the unordered_multiset.

Parameters

__x	Element to be inserted.

Returns

An iterator that points to the inserted element.

Insertion requires amortized constant time.

Definition at line 1220 of file unordered_set.h.

References std::move().

4.1031.4.31 template<class _Value , class _Hash , class _Pred , class _Alloc > iterator std::unordered_multiset< _Value, _Hash, _Pred, _Alloc >::insert (const_iterator *__hint*, const value_type & *__x*) [inline]

Inserts an element into the unordered_multiset.

Parameters

__hint	An iterator that serves as a hint as to where the element should be inserted.
__x	Element to be inserted.

Returns

An iterator that points to the inserted element.

Note that the first parameter is only a hint and can potentially improve the performance of the insertion process. A bad hint would cause no gains in efficiency.

For more on *hinting*, see: https://gcc.gnu.org/onlinedocs/libstdc++/manual/associative.html#containers.associative.insert_hints

Insertion requires amortized constant.

Definition at line 1242 of file unordered_set.h.

4.1031.4.32 template<class _Value , class _Hash , class _Pred , class _Alloc > iterator std::unordered_multiset< _Value, _Hash, _Pred, _Alloc >::insert (const_iterator *__hint*, value_type && *__x*) [inline]

Inserts an element into the unordered_multiset.

Parameters

__hint	An iterator that serves as a hint as to where the element should be inserted.
__x	Element to be inserted.

Returns

An iterator that points to the inserted element.

Note that the first parameter is only a hint and can potentially improve the performance of the insertion process. A bad hint would cause no gains in efficiency.

For more on *hinting*, see: https://gcc.gnu.org/onlinedocs/libstdc++/manual/associative.html#containers.associative.insert_hints

Insertion requires amortized constant.

Definition at line 1246 of file unordered_set.h.

References std::move().

4.1031.4.33 template<class _Value , class _Hash , class _Pred , class _Alloc > template<typename _InputIterator > void std::unordered_multiset< _Value, _Hash, _Pred, _Alloc >::insert (_InputIterator *__first,* _InputIterator *__last*) [inline]

A template function that inserts a range of elements.

Parameters

__first	Iterator pointing to the start of the range to be inserted.
__last	Iterator pointing to the end of the range.

Complexity similar to that of the range constructor.

Definition at line 1260 of file unordered_set.h.

4.1031.4.34 template<class _Value , class _Hash , class _Pred , class _Alloc > void std::unordered_multiset< _Value, _Hash, _Pred, _Alloc >::insert (initializer_list< value_type > __l) [inline]

Inserts a list of elements into the unordered_multiset.

Parameters

__l	A std::initializer_list<value_type> of elements to be inserted.

Complexity similar to that of the range constructor.

Definition at line 1271 of file unordered_set.h.

4.1031.4.35 template<class _Value , class _Hash , class _Pred , class _Alloc > key_equal std::unordered_multiset< _Value, _Hash, _Pred, _Alloc >::key_eq ( ) const [inline]

Returns the key comparison object with which the unordered_multiset was constructed.

Definition at line 1430 of file unordered_set.h.

4.1031.4.36 template<class _Value , class _Hash , class _Pred , class _Alloc > float std::unordered_multiset< _Value, _Hash, _Pred, _Alloc >::load_factor ( ) const [inline], [noexcept]

Returns the average number of elements per bucket.

Definition at line 1566 of file unordered_set.h.

4.1031.4.37 template<class _Value , class _Hash , class _Pred , class _Alloc > size_type std::unordered_multiset< _Value, _Hash, _Pred, _Alloc >::max_bucket_count ( ) const [inline], [noexcept]

Returns the maximum number of buckets of the unordered_multiset.

Definition at line 1501 of file unordered_set.h.

4.1031.4.38 template<class _Value , class _Hash , class _Pred , class _Alloc > float std::unordered_multiset< _Value, _Hash, _Pred, _Alloc >::max_load_factor ( ) const [inline], [noexcept]

Returns a positive number that the unordered_multiset tries to keep the load factor less than or equal to.

Definition at line 1572 of file unordered_set.h.

4.1031.4.39 template<class _Value , class _Hash , class _Pred , class _Alloc > void std::unordered_multiset< _Value, _Hash, _Pred, _Alloc >::max_load_factor (float __z) [inline]

Change the unordered_multiset maximum load factor.

Parameters

__z	The new maximum load factor.

Definition at line 1580 of file unordered_set.h.

4.1031.4.40 template<class _Value , class _Hash , class _Pred , class _Alloc > size_type std::unordered_multiset< _Value, _Hash, _Pred, _Alloc >::max_size ( ) const [inline], [noexcept]

Returns the maximum size of the unordered_multiset.

Definition at line 1122 of file unordered_set.h.

4.1031.4.41 template<class _Value , class _Hash , class _Pred , class _Alloc > unordered_multiset& std::unordered_multiset< _Value, _Hash, _Pred, _Alloc >::operator= (const unordered_multiset< _Value, _Hash, _Pred, _Alloc > &) [default]

Copy assignment operator.

4.1031.4.42 template<class _Value , class _Hash , class _Pred , class _Alloc > unordered_multiset& std::unordered_multiset< _Value, _Hash, _Pred, _Alloc >::operator= (unordered_multiset< _Value, _Hash, _Pred, _Alloc > &&) [default]

Move assignment operator.

4.1031.4.43 template<class _Value , class _Hash , class _Pred , class _Alloc > unordered_multiset& std::unordered_multiset< _Value, _Hash, _Pred, _Alloc >::operator= (initializer_list< value_type > __l) [inline]

Unordered_multiset list assignment operator.

Parameters

__l	An initializer_list.

This function fills an unordered_multiset with copies of the elements in the initializer list *__l*.

Note that the assignment completely changes the unordered_multiset and that the resulting unordered_multiset's size is the same as the number of elements assigned.

Definition at line 1097 of file unordered_set.h.

4.1031.4.44 template<class _Value , class _Hash , class _Pred , class _Alloc > void std::unordered_multiset< _Value, _Hash, _Pred, _Alloc >::rehash (size_type *__n*) [inline]

May rehash the unordered_multiset.

Parameters

__n	The new number of buckets.

Rehash will occur only if the new number of buckets respect the unordered_multiset maximum load factor.

Definition at line 1591 of file unordered_set.h.

4.1031.4.45 template<class _Value , class _Hash , class _Pred , class _Alloc > void std::unordered_multiset< _Value, _Hash, _Pred, _Alloc >::reserve (size_type *__n*) [inline]

Prepare the unordered_multiset for a specified number of elements.

Parameters

__n	Number of elements required.

Same as rehash(ceil(n / max_load_factor())).

Definition at line 1602 of file unordered_set.h.

4.1031.4.46 template<class _Value , class _Hash , class _Pred , class _Alloc > size_type std::unordered_multiset< _Value, _Hash, _Pred, _Alloc >::size ( ) const [inline], [noexcept]

Returns the size of the unordered_multiset.

Definition at line 1117 of file unordered_set.h.

4.1031.4.47 template<class _Value , class _Hash , class _Pred , class _Alloc > void std::unordered_multiset< _Value, _Hash, _Pred, _Alloc >::swap (unordered_multiset< _Value, _Hash, _Pred, _Alloc > & __x) [inline], [noexcept]

Swaps data with another unordered_multiset.

Parameters

__x	An unordered_multiset of the same element and allocator types.

This exchanges the elements between two sets in constant time. Note that the global std::swap() function is specialized such that std::swap(s1,s2) will feed to this function.

Definition at line 1382 of file unordered_set.h.

4.1032.1 Detailed Description

template<typename _Key, typename _Hash, typename _Pred, typename _Allocator>class std::__debug::unordered_multiset< _Key, _Hash, _Pred, _Allocator >

Class std::unordered_multiset with safety/checking/debug instrumentation.

Definition at line 42 of file debug/unordered_set.

4.1032.2 Member Function Documentation

4.1032.2.1 void __gnu_debug::_Safe_unordered_container_base::_M_detach_all ( ) [protected], [inherited]

Detach all iterators, leaving them singular.

4.1032.2.2 void __gnu_debug::_Safe_sequence_base::_M_detach_singular ( ) [protected], [inherited]

Detach all singular iterators.

Postcondition

for all iterators i attached to this sequence, i->_M_version == _M_version.

4.1032.2.3 __gnu_cxx::__mutex& __gnu_debug::_Safe_sequence_base::_M_get_mutex ( ) throw) [protected], [inherited]

For use in _Safe_sequence.

Referenced by __gnu_debug::_Safe_sequence< _Sequence >::_M_transfer_from_if().

4.1032.2.4 void __gnu_debug::_Safe_sequence_base::_M_invalidate_all ( ) const [inline], [protected], [inherited]

Invalidates all iterators.

Definition at line 256 of file safe_base.h.

References __gnu_debug::_Safe_sequence_base::_M_version.

4.1032.2.5 void __gnu_debug::_Safe_unordered_container< unordered_multiset< _Value, _Hash, _Pred, _Alloc > >::_M_invalidate_if (_Predicate *__pred*) [protected], [inherited]

Invalidates all iterators `x` that reference this container, are not singular, and for which `__pred(x)` returns `true`. `__pred` will be invoked with the normal iterators nested in the safe ones.

4.1032.2.6 void __gnu_debug::_Safe_unordered_container< unordered_multiset< _Value, _Hash, _Pred, _Alloc > >::_M_invalidate_local_if (_Predicate *__pred*) [protected], [inherited]

Invalidates all local iterators `x` that reference this container, are not singular, and for which `__pred(x)` returns `true`. `__pred` will be invoked with the normal local iterators nested in the safe ones.

4.1032.2.7 void __gnu_debug::_Safe_sequence_base::_M_revalidate_singular ( ) [protected], [inherited]

Revalidates all attached singular iterators. This method may be used to validate iterators that were invalidated before (but for some reason, such as an exception, need to become valid again).

4.1032.2.8 void __gnu_debug::_Safe_unordered_container_base::_M_swap (_Safe_unordered_container_base & __x) [protected], [noexcept], [inherited]

Swap this container with the given container. This operation also swaps ownership of the iterators, so that when the operation is complete all iterators that originally referenced one container now reference the other container.

4.1032.2.9 void __gnu_debug::_Safe_sequence_base::_M_swap (_Safe_sequence_base & __x) [protected], [noexcept], [inherited]

Swap this sequence with the given sequence. This operation also swaps ownership of the iterators, so that when the operation is complete all iterators that originally referenced one container now reference the other container.

4.1032.3 Member Data Documentation

4.1032.3.1 _Safe_iterator_base* __gnu_debug::_Safe_sequence_base::_M_const_iterators [inherited]

The list of constant iterators that reference this container.

Definition at line 197 of file safe_base.h.

Referenced by __gnu_debug::_Safe_sequence< _Sequence >::_M_transfer_from_if().

4.1032.3.2 _Safe_iterator_base* __gnu_debug::_Safe_unordered_container_base::_M_const_local_iterators [inherited]

The list of constant local iterators that reference this container.

Definition at line 130 of file safe_unordered_base.h.

4.1032.3.3 _Safe_iterator_base* __gnu_debug::_Safe_sequence_base::_M_iterators [inherited]

The list of mutable iterators that reference this container.

Definition at line 194 of file safe_base.h.

Referenced by __gnu_debug::_Safe_sequence< _Sequence >::_M_transfer_from_if().

4.1032.3.4 _Safe_iterator_base* __gnu_debug::_Safe_unordered_container_base::_M_local_iterators [inherited]

The list of mutable local iterators that reference this container.

Definition at line 127 of file safe_unordered_base.h.

4.1032.3.5 unsigned int __gnu_debug::_Safe_sequence_base::_M_version [mutable], [inherited]

The container version number. This number may never be 0.

Definition at line 200 of file safe_base.h.

Referenced by __gnu_debug::_Safe_sequence_base::_M_invalidate_all().

4.1033.1 Detailed Description

template<typename _Value, typename _Hash = hash<_Value>, typename _Pred = equal_to<_Value>, typename _Alloc = allocator<_Value>>class std::unordered_set< _Value, _Hash, _Pred, _Alloc >

A standard container composed of unique keys (containing at most one of each key value) in which the elements' keys are the elements themselves.

Template Parameters

_Value	Type of key objects.
_Hash	Hashing function object type, defaults to hash<_Value>.
_Pred	Predicate function object type, defaults to equal_to<_Value>.
_Alloc	Allocator type, defaults to allocator<_Key>.

Meets the requirements of a container, and unordered associative container

Base is _Hashtable, dispatched at compile time via template alias __uset_hashtable.

Definition at line 97 of file unordered_set.h.

4.1033.3 Constructor & Destructor Documentation

4.1033.3.1 template<typename _Value, typename _Hash = hash<_Value>, typename _Pred = equal_to<_Value>, typename _Alloc = allocator<_Value>> std::unordered_set< _Value, _Hash, _Pred, _Alloc >::unordered_set ( ) [default]

Default constructor.

4.1033.3.2 template<typename _Value, typename _Hash = hash<_Value>, typename _Pred = equal_to<_Value>, typename _Alloc = allocator<_Value>> std::unordered_set< _Value, _Hash, _Pred, _Alloc >::unordered_set (size_type *__n*, const hasher & *__hf* = hasher(), const key_equal & *__eql* = key_equal(), const allocator_type & *__a* = allocator_type()) [inline], [explicit]

Default constructor creates no elements.

Parameters

__n	Minimal initial number of buckets.
__hf	A hash functor.
__eql	A key equality functor.
__a	An allocator object.

Definition at line 145 of file unordered_set.h.

4.1033.3.3 template<typename _Value, typename _Hash = hash<_Value>, typename _Pred = equal_to<_Value>, typename _Alloc = allocator<_Value>> template<typename _InputIterator > std::unordered_set< _Value, _Hash, _Pred, _Alloc >::unordered_set (_InputIterator *__first*, _InputIterator *__last*, size_type *__n* = 0, const hasher & *__hf* = hasher(), const key_equal & *__eql* = key_equal(), const allocator_type & *__a* = allocator_type()) [inline]

Builds an unordered_set from a range.

Parameters

__first	An input iterator.
__last	An input iterator.
__n	Minimal initial number of buckets.
__hf	A hash functor.
__eql	A key equality functor.
__a	An allocator object.

Create an unordered_set consisting of copies of the elements from [__first,__last). This is linear in N (where N is distance(__first,__last)).

Definition at line 166 of file unordered_set.h.

4.1033.3.4 template<typename _Value, typename _Hash = hash<_Value>, typename _Pred = equal_to<_Value>, typename _Alloc = allocator<_Value>> std::unordered_set< _Value, _Hash, _Pred, _Alloc >::unordered_set (const unordered_set< _Value, _Hash, _Pred, _Alloc > &) [default]

Copy constructor.

4.1033.3.5 template<typename _Value, typename _Hash = hash<_Value>, typename _Pred = equal_to<_Value>, typename _Alloc = allocator<_Value>> std::unordered_set< _Value, _Hash, _Pred, _Alloc >::unordered_set (unordered_set< _Value, _Hash, _Pred, _Alloc > &&) [default]

Move constructor.

4.1033.3.6 template<typename _Value, typename _Hash = hash<_Value>, typename _Pred = equal_to<_Value>, typename _Alloc = allocator<_Value>> std::unordered_set< _Value, _Hash, _Pred, _Alloc >::unordered_set (const allocator_type & *__a*) [inline], [explicit]

Creates an unordered_set with no elements.

Parameters

__a	An allocator object.

Definition at line 185 of file unordered_set.h.

4.1033.3.7 template<typename _Value, typename _Hash = hash<_Value>, typename _Pred = equal_to<_Value>, typename _Alloc = allocator<_Value>> std::unordered_set< _Value, _Hash, _Pred, _Alloc >::unordered_set (initializer_list< value_type > __l, size_type __n = 0, const hasher & __hf = hasher (), const key_equal & __eql = key_equal (), const allocator_type & __a = allocator_type ()) [inline]

Builds an unordered_set from an initializer_list.

Parameters

__l	An initializer_list.
__n	Minimal initial number of buckets.
__hf	A hash functor.
__eql	A key equality functor.
__a	An allocator object.

Create an unordered_set consisting of copies of the elements in the list. This is linear in N (where N is *__l.size()*).

Definition at line 220 of file unordered_set.h.

4.1033.4 Member Function Documentation

4.1033.4.1 template<typename _Value, typename _Hash = hash<_Value>, typename _Pred = equal_to<_Value>, typename _Alloc = allocator<_Value>> iterator std::unordered_set< _Value, _Hash, _Pred, _Alloc >::begin ( ) [inline], [noexcept]

Returns a read-only (constant) iterator that points to the first element in the unordered_set.

Definition at line 319 of file unordered_set.h.

4.1033.4.2 template<typename _Value, typename _Hash = hash<_Value>, typename _Pred = equal_to<_Value>, typename _Alloc = allocator<_Value>> const_iterator std::unordered_set< _Value, _Hash, _Pred, _Alloc >::begin ( ) const [inline], [noexcept]

Returns a read-only (constant) iterator that points to the first element in the unordered_set.

Definition at line 323 of file unordered_set.h.

4.1033.4.3 template<typename _Value, typename _Hash = hash<_Value>, typename _Pred = equal_to<_Value>, typename _Alloc = allocator<_Value>> local_iterator std::unordered_set< _Value, _Hash, _Pred, _Alloc >::begin (size_type *__n*) [inline]

Returns a read-only (constant) iterator pointing to the first bucket element.

Parameters

__n	The bucket index.

Returns

A read-only local iterator.

Definition at line 737 of file unordered_set.h.

4.1033.4.4 template<typename _Value, typename _Hash = hash<_Value>, typename _Pred = equal_to<_Value>, typename _Alloc = allocator<_Value>> const_local_iterator std::unordered_set< _Value, _Hash, _Pred, _Alloc >::begin (size_type *__n*) const [inline]

Returns a read-only (constant) iterator pointing to the first bucket element.

Parameters

__n	The bucket index.

Returns

A read-only local iterator.

Definition at line 741 of file unordered_set.h.

4.1033.4.5 template<typename _Value, typename _Hash = hash<_Value>, typename _Pred = equal_to<_Value>, typename _Alloc = allocator<_Value>> size_type std::unordered_set< _Value, _Hash, _Pred, _Alloc >::bucket_count ( ) const [inline], [noexcept]

Returns the number of buckets of the unordered_set.

Definition at line 703 of file unordered_set.h.

4.1033.4.6 template<typename _Value, typename _Hash = hash<_Value>, typename _Pred = equal_to<_Value>, typename _Alloc = allocator<_Value>> const_iterator std::unordered_set< _Value, _Hash, _Pred, _Alloc >::cbegin ( ) const [inline], [noexcept]

Returns a read-only (constant) iterator that points to the first element in the unordered_set.

Definition at line 346 of file unordered_set.h.

4.1033.4.7 template<typename _Value, typename _Hash = hash<_Value>, typename _Pred = equal_to<_Value>, typename _Alloc = allocator<_Value>> const_local_iterator std::unordered_set< _Value, _Hash, _Pred, _Alloc >::cbegin (size_type __n) const [inline]

Returns a read-only (constant) iterator pointing to the first bucket element.

Parameters

__n	The bucket index.

Returns

A read-only local iterator.

Definition at line 745 of file unordered_set.h.

4.1033.4.8 template<typename _Value, typename _Hash = hash<_Value>, typename _Pred = equal_to<_Value>, typename _Alloc = allocator<_Value>> const_iterator std::unordered_set< _Value, _Hash, _Pred, _Alloc >::cend ( ) const [inline], [noexcept]

Returns a read-only (constant) iterator that points one past the last element in the unordered_set.

Definition at line 354 of file unordered_set.h.

4.1033.4.9 template<typename _Value, typename _Hash = hash<_Value>, typename _Pred = equal_to<_Value>, typename _Alloc = allocator<_Value>> const_local_iterator std::unordered_set< _Value, _Hash, _Pred, _Alloc >::cend (size_type __n) const [inline]

Returns a read-only (constant) iterator pointing to one past the last bucket elements.

Parameters

__n	The bucket index.

Returns

A read-only local iterator.

Definition at line 765 of file unordered_set.h.

4.1033.4.10 template<typename _Value, typename _Hash = hash<_Value>, typename _Pred = equal_to<_Value>, typename _Alloc = allocator<_Value>> void std::unordered_set< _Value, _Hash, _Pred, _Alloc >::clear ( ) [inline], [noexcept]

Erases all elements in an unordered_set. Note that this function only erases the elements, and that if the elements themselves are pointers, the pointed-to memory is not touched in any way. Managing the pointer is the user's responsibility.

Definition at line 572 of file unordered_set.h.

4.1033.4.11 template<typename _Value, typename _Hash = hash<_Value>, typename _Pred = equal_to<_Value>, typename _Alloc = allocator<_Value>> size_type std::unordered_set< _Value, _Hash, _Pred, _Alloc >::count (const key_type & __x) const [inline]

Finds the number of elements.

Parameters

__x	Element to located.

Returns

Number of elements with specified key.

This function only makes sense for unordered_multisets; for unordered_set the result will either be 0 (not present) or 1 (present).

Definition at line 667 of file unordered_set.h.

4.1033.4.12 template<typename _Value, typename _Hash = hash<_Value>, typename _Pred = equal_to<_Value>, typename _Alloc = allocator<_Value>> template<typename... _Args> std::pair<iterator, bool> std::unordered_set< _Value, _Hash, _Pred, _Alloc >::emplace (_Args &&... __args) [inline]

Attempts to build and insert an element into the unordered_set.

Parameters

__args	Arguments used to generate an element.

Returns

A pair, of which the first element is an iterator that points to the possibly inserted element, and the second is a bool that is true if the element was actually inserted.

This function attempts to build and insert an element into the unordered_set. An unordered_set relies on unique keys and thus an element is only inserted if it is not already present in the unordered_set.

Insertion requires amortized constant time.

Definition at line 376 of file unordered_set.h.

4.1033.4.13 template<typename _Value, typename _Hash = hash<_Value>, typename _Pred = equal_to<_Value>, typename _Alloc = allocator<_Value>> template<typename... _Args> iterator std::unordered_set< _Value, _Hash, _Pred, _Alloc >::emplace_hint (const_iterator *__pos,* _Args &&... *__args*) [inline]

Attempts to insert an element into the unordered_set.

Parameters

__pos	An iterator that serves as a hint as to where the element should be inserted.
__args	Arguments used to generate the element to be inserted.

Returns

An iterator that points to the element with key equivalent to the one generated from *__args* (may or may not be the element itself).

This function is not concerned about whether the insertion took place, and thus does not return a boolean like the single-argument emplace() does. Note that the first parameter is only a hint and can potentially improve the performance of the insertion process. A bad hint would cause no gains in efficiency.

For more on *hinting*, see: https://gcc.gnu.org/onlinedocs/libstdc++/manual/associative.html#containers.associative.insert_hints

Insertion requires amortized constant time.

Definition at line 402 of file unordered_set.h.

4.1033.4.14 template<typename _Value, typename _Hash = hash<_Value>, typename _Pred = equal_to<_Value>, typename _Alloc = allocator<_Value>> bool std::unordered_set< _Value, _Hash, _Pred, _Alloc >::empty ( ) const [inline], [noexcept]

Returns true if the unordered_set is empty.

Definition at line 298 of file unordered_set.h.

4.1033.4.15 template<typename _Value, typename _Hash = hash<_Value>, typename _Pred = equal_to<_Value>, typename _Alloc = allocator<_Value>> iterator std::unordered_set< _Value, _Hash, _Pred, _Alloc >::end ( ) [inline], [noexcept]

Returns a read-only (constant) iterator that points one past the last element in the unordered_set.

Definition at line 333 of file unordered_set.h.

4.1033.4.16 template<typename _Value, typename _Hash = hash<_Value>, typename _Pred = equal_to<_Value>, typename _Alloc = allocator<_Value>> const_iterator std::unordered_set< _Value, _Hash, _Pred, _Alloc >::end ( ) const [inline], [noexcept]

Returns a read-only (constant) iterator that points one past the last element in the unordered_set.

Definition at line 337 of file unordered_set.h.

4.1033.4.17 template<typename _Value, typename _Hash = hash<_Value>, typename _Pred = equal_to<_Value>, typename _Alloc = allocator<_Value>> local_iterator std::unordered_set< _Value, _Hash, _Pred, _Alloc >::end (size_type *__n*) [inline]

Returns a read-only (constant) iterator pointing to one past the last bucket elements.

Parameters

__n	The bucket index.

Returns

A read-only local iterator.

Definition at line 757 of file unordered_set.h.

4.1033.4.18 template<typename _Value, typename _Hash = hash<_Value>, typename _Pred = equal_to<_Value>, typename _Alloc = allocator<_Value>> const_local_iterator std::unordered_set< _Value, _Hash, _Pred, _Alloc >::end (size_type *__n*) const [inline]

Returns a read-only (constant) iterator pointing to one past the last bucket elements.

Parameters

__n	The bucket index.

Returns

A read-only local iterator.

Definition at line 761 of file unordered_set.h.

4.1033.4.19 template<typename _Value, typename _Hash = hash<_Value>, typename _Pred = equal_to<_Value>, typename _Alloc = allocator<_Value>> std::pair<iterator, iterator> std::unordered_set< _Value, _Hash, _Pred, _Alloc >::equal_range (const key_type & *__x*) [inline]

Finds a subsequence matching given key.

Parameters

__x	Key to be located.

Returns

Pair of iterators that possibly points to the subsequence matching given key.

This function probably only makes sense for multisets.

Definition at line 691 of file unordered_set.h.

4.1033.4.20 template<typename _Value, typename _Hash = hash<_Value>, typename _Pred = equal_to<_Value>, typename _Alloc = allocator<_Value>> std::pair<const_iterator, const_iterator> std::unordered_set< _Value, _Hash, _Pred, _Alloc >::equal_range (const key_type & *__x*) const [inline]

Finds a subsequence matching given key.

Parameters

__x	Key to be located.

Returns

Pair of iterators that possibly points to the subsequence matching given key.

This function probably only makes sense for multisets.

Definition at line 695 of file unordered_set.h.

4.1033.4.21 template<typename _Value, typename _Hash = hash<_Value>, typename _Pred = equal_to<_Value>, typename _Alloc = allocator<_Value>> iterator std::unordered_set< _Value, _Hash, _Pred, _Alloc >::erase (const_iterator *__position*) [inline]

Erases an element from an unordered_set.

Parameters

__position	An iterator pointing to the element to be erased.

Returns

An iterator pointing to the element immediately following *__position* prior to the element being erased. If no such element exists, end() is returned.

This function erases an element, pointed to by the given iterator, from an unordered_set. Note that this function only erases the element, and that if the element is itself a pointer, the pointed-to memory is not touched in any way. Managing the pointer is the user's responsibility.

Definition at line 522 of file unordered_set.h.

4.1033.4.22 template<typename _Value, typename _Hash = hash<_Value>, typename _Pred = equal_to<_Value>, typename _Alloc = allocator<_Value>> iterator std::unordered_set< _Value, _Hash, _Pred, _Alloc >::erase (iterator *__position*) [inline]

Erases an element from an unordered_set.

Parameters

__position	An iterator pointing to the element to be erased.

Returns

An iterator pointing to the element immediately following *__position* prior to the element being erased. If no such element exists, end() is returned.

This function erases an element, pointed to by the given iterator, from an unordered_set. Note that this function only erases the element, and that if the element is itself a pointer, the pointed-to memory is not touched in any way. Managing the pointer is the user's responsibility.

Definition at line 527 of file unordered_set.h.

4.1033.4.23 template<typename _Value, typename _Hash = hash<_Value>, typename _Pred = equal_to<_Value>, typename _Alloc = allocator<_Value>> size_type std::unordered_set< _Value, _Hash, _Pred, _Alloc >::erase (const key_type & *__x*) [inline]

Erases elements according to the provided key.

Parameters

__x	Key of element to be erased.

Returns

The number of elements erased.

This function erases all the elements located by the given key from an unordered_set. For an unordered_set the result of this function can only be 0 (not present) or 1 (present). Note that this function only erases the element, and that if the element is itself a pointer, the pointed-to memory is not touched in any way. Managing the pointer is the user's responsibility.

Definition at line 544 of file unordered_set.h.

4.1033.4.24 template<typename _Value, typename _Hash = hash<_Value>, typename _Pred = equal_to<_Value>, typename _Alloc = allocator<_Value>> iterator std::unordered_set< _Value, _Hash, _Pred, _Alloc >::erase (const_iterator *__first,* const_iterator *__last*) [inline]

Erases a [__first,__last) range of elements from an unordered_set.

Parameters

__first	Iterator pointing to the start of the range to be erased.
__last	Iterator pointing to the end of the range to be erased.

Returns

The iterator *__last*.

This function erases a sequence of elements from an unordered_set. Note that this function only erases the element, and that if the element is itself a pointer, the pointed-to memory is not touched in any way. Managing the pointer is the user's responsibility.

Definition at line 562 of file unordered_set.h.

4.1033.4.25 template<typename _Value, typename _Hash = hash<_Value>, typename _Pred = equal_to<_Value>, typename _Alloc = allocator<_Value>> iterator std::unordered_set< _Value, _Hash, _Pred, _Alloc >::find (const key_type & __x) [inline]

Tries to locate an element in an unordered_set.

Parameters

__x	Element to be located.

Returns

Iterator pointing to sought-after element, or end() if not found.

This function takes a key and tries to locate the element with which the key matches. If successful the function returns an iterator pointing to the sought after element. If unsuccessful it returns the past-the-end (`end()`) iterator.

Definition at line 649 of file unordered_set.h.

4.1033.4.26 template<typename _Value, typename _Hash = hash<_Value>, typename _Pred = equal_to<_Value>, typename _Alloc = allocator<_Value>> const_iterator std::unordered_set< _Value, _Hash, _Pred, _Alloc >::find (const key_type & __x) const [inline]

Tries to locate an element in an unordered_set.

Parameters

__x	Element to be located.

Returns

Iterator pointing to sought-after element, or end() if not found.

This function takes a key and tries to locate the element with which the key matches. If successful the function returns an iterator pointing to the sought after element. If unsuccessful it returns the past-the-end (`end()`) iterator.

Definition at line 653 of file unordered_set.h.

4.1033.4.27 template<typename _Value, typename _Hash = hash<_Value>, typename _Pred = equal_to<_Value>, typename _Alloc = allocator<_Value>> allocator_type std::unordered_set< _Value, _Hash, _Pred, _Alloc >::get_allocator ( ) const [inline], [noexcept]

Returns the allocator object used by the unordered_set.

Definition at line 291 of file unordered_set.h.

4.1033.4.28 template<typename _Value, typename _Hash = hash<_Value>, typename _Pred = equal_to<_Value>, typename _Alloc = allocator<_Value>> hasher std::unordered_set< _Value, _Hash, _Pred, _Alloc >::hash_function ( ) const [inline]

Returns the hash functor object with which the unordered_set was constructed.

Definition at line 625 of file unordered_set.h.

4.1033.4.29 template<typename _Value, typename _Hash = hash<_Value>, typename _Pred = equal_to<_Value>, typename _Alloc = allocator<_Value>> std::pair<iterator, bool> std::unordered_set< _Value, _Hash, _Pred, _Alloc >::insert (const value_type & __x) [inline]

Attempts to insert an element into the unordered_set.

Parameters

__x	Element to be inserted.

Returns

A pair, of which the first element is an iterator that points to the possibly inserted element, and the second is a bool that is true if the element was actually inserted.

This function attempts to insert an element into the unordered_set. An unordered_set relies on unique keys and thus an element is only inserted if it is not already present in the unordered_set.

Insertion requires amortized constant time.

Definition at line 420 of file unordered_set.h.

4.1033.4.30 template<typename _Value, typename _Hash = hash<_Value>, typename _Pred = equal_to<_Value>, typename _Alloc = allocator<_Value>> std::pair<iterator, bool> std::unordered_set< _Value, _Hash, _Pred, _Alloc >::insert (value_type && __x) [inline]

Attempts to insert an element into the unordered_set.

Parameters

__x	Element to be inserted.

Returns

A pair, of which the first element is an iterator that points to the possibly inserted element, and the second is a bool that is true if the element was actually inserted.

This function attempts to insert an element into the unordered_set. An unordered_set relies on unique keys and thus an element is only inserted if it is not already present in the unordered_set.

Insertion requires amortized constant time.

Definition at line 424 of file unordered_set.h.

References std::move().

4.1033.4.31 template<typename _Value, typename _Hash = hash<_Value>, typename _Pred = equal_to<_Value>, typename _Alloc = allocator<_Value>> iterator std::unordered_set< _Value, _Hash, _Pred, _Alloc >::insert (const_iterator *__hint,* const value_type & __x) [inline]

Attempts to insert an element into the unordered_set.

Parameters

__hint	An iterator that serves as a hint as to where the element should be inserted.
__x	Element to be inserted.

Returns

An iterator that points to the element with key of *__x* (may or may not be the element passed in).

This function is not concerned about whether the insertion took place, and thus does not return a boolean like the single-argument insert() does. Note that the first parameter is only a hint and can potentially improve the performance of the insertion process. A bad hint would cause no gains in efficiency.

For more on *hinting*, see: https://gcc.gnu.org/onlinedocs/libstdc++/manual/associative.html#containers.associative.insert_hints

Insertion requires amortized constant.

Definition at line 449 of file unordered_set.h.

4.1033.4.32 template<typename _Value, typename _Hash = hash<_Value>, typename _Pred = equal_to<_Value>, typename _Alloc = allocator<_Value>> iterator std::unordered_set< _Value, _Hash, _Pred, _Alloc >::insert (const_iterator *__hint*, value_type && *__x*) [inline]

Attempts to insert an element into the unordered_set.

Parameters

__hint	An iterator that serves as a hint as to where the element should be inserted.
__x	Element to be inserted.

Returns

An iterator that points to the element with key of *__x* (may or may not be the element passed in).

This function is not concerned about whether the insertion took place, and thus does not return a boolean like the single-argument insert() does. Note that the first parameter is only a hint and can potentially improve the performance of the insertion process. A bad hint would cause no gains in efficiency.

For more on *hinting*, see: https://gcc.gnu.org/onlinedocs/libstdc++/manual/associative.html#containers.associative.insert_hints

Insertion requires amortized constant.

Definition at line 453 of file unordered_set.h.

References std::move().

4.1033.4.33 template<typename _Value, typename _Hash = hash<_Value>, typename _Pred = equal_to<_Value>, typename _Alloc = allocator<_Value>> template<typename _InputIterator > void std::unordered_set< _Value, _Hash, _Pred, _Alloc >::insert (_InputIterator *__first*, _InputIterator *__last*) [inline]

A template function that attempts to insert a range of elements.

Parameters

__first	Iterator pointing to the start of the range to be inserted.
__last	Iterator pointing to the end of the range.

Complexity similar to that of the range constructor.

Definition at line 468 of file unordered_set.h.

4.1033.4.34 template<typename _Value, typename _Hash = hash<_Value>, typename _Pred = equal_to<_Value>, typename _Alloc = allocator<_Value>> void std::unordered_set< _Value, _Hash, _Pred, _Alloc >::insert (initializer_list< value_type > __l) [inline]

Attempts to insert a list of elements into the unordered_set.

Parameters

__l	A std::initializer_list<value_type> of elements to be inserted.

Complexity similar to that of the range constructor.

Definition at line 479 of file unordered_set.h.

4.1033.4.35 template<typename _Value, typename _Hash = hash<_Value>, typename _Pred = equal_to<_Value>, typename _Alloc = allocator<_Value>> key_equal std::unordered_set< _Value, _Hash, _Pred, _Alloc >::key_eq ( ) const [inline]

Returns the key comparison object with which the unordered_set was constructed.

Definition at line 631 of file unordered_set.h.

4.1033.4.36 template<typename _Value, typename _Hash = hash<_Value>, typename _Pred = equal_to<_Value>, typename _Alloc = allocator<_Value>> float std::unordered_set< _Value, _Hash, _Pred, _Alloc >::load_factor ( ) const [inline], [noexcept]

Returns the average number of elements per bucket.

Definition at line 773 of file unordered_set.h.

4.1033.4.37 template<typename _Value, typename _Hash = hash<_Value>, typename _Pred = equal_to<_Value>, typename _Alloc = allocator<_Value>> size_type std::unordered_set< _Value, _Hash, _Pred, _Alloc >::max_bucket_count ( ) const [inline], [noexcept]

Returns the maximum number of buckets of the unordered_set.

Definition at line 708 of file unordered_set.h.

4.1033.4.38 template<typename _Value, typename _Hash = hash<_Value>, typename _Pred = equal_to<_Value>, typename _Alloc = allocator<_Value>> float std::unordered_set< _Value, _Hash, _Pred, _Alloc >::max_load_factor ( ) const [inline], [noexcept]

Returns a positive number that the unordered_set tries to keep the load factor less than or equal to.

Definition at line 779 of file unordered_set.h.

4.1033.4.39 template<typename _Value, typename _Hash = hash<_Value>, typename _Pred = equal_to<_Value>, typename _Alloc = allocator<_Value>> void std::unordered_set< _Value, _Hash, _Pred, _Alloc >::max_load_factor (float __z) [inline]

Change the unordered_set maximum load factor.

Parameters

__z	The new maximum load factor.

Definition at line 787 of file unordered_set.h.

4.1033.4.40 **template<typename _Value, typename _Hash = hash<_Value>, typename _Pred = equal_to<_Value>, typename _Alloc = allocator<_Value>> size_type std::unordered_set< _Value, _Hash, _Pred, _Alloc >::max_size ( ) const** [inline], [noexcept]

Returns the maximum size of the unordered_set.

Definition at line 308 of file unordered_set.h.

4.1033.4.41 **template<typename _Value, typename _Hash = hash<_Value>, typename _Pred = equal_to<_Value>, typename _Alloc = allocator<_Value>> unordered_set& std::unordered_set< _Value, _Hash, _Pred, _Alloc >::operator= (const unordered_set< _Value, _Hash, _Pred, _Alloc > &)** [default]

Copy assignment operator.

4.1033.4.42 **template<typename _Value, typename _Hash = hash<_Value>, typename _Pred = equal_to<_Value>, typename _Alloc = allocator<_Value>> unordered_set& std::unordered_set< _Value, _Hash, _Pred, _Alloc >::operator= (unordered_set< _Value, _Hash, _Pred, _Alloc > &&)** [default]

Move assignment operator.

4.1033.4.43 **template<typename _Value, typename _Hash = hash<_Value>, typename _Pred = equal_to<_Value>, typename _Alloc = allocator<_Value>> unordered_set& std::unordered_set< _Value, _Hash, _Pred, _Alloc >::operator= (initializer_list< value_type > *__l*)** [inline]

Unordered_set list assignment operator.

Parameters

__l	An initializer_list.

This function fills an unordered_set with copies of the elements in the initializer list *__l*.

Note that the assignment completely changes the unordered_set and that the resulting unordered_set's size is the same as the number of elements assigned.

Definition at line 283 of file unordered_set.h.

4.1033.4.44 **template<typename _Value, typename _Hash = hash<_Value>, typename _Pred = equal_to<_Value>, typename _Alloc = allocator<_Value>> void std::unordered_set< _Value, _Hash, _Pred, _Alloc >::rehash (size_type *__n*)** [inline]

May rehash the unordered_set.

Parameters

__n	The new number of buckets.

Rehash will occur only if the new number of buckets respect the unordered_set maximum load factor.

Definition at line 798 of file unordered_set.h.

4.1033.4.45 **template<typename _Value, typename _Hash = hash<_Value>, typename _Pred = equal_to<_Value>, typename _Alloc = allocator<_Value>> void std::unordered_set< _Value, _Hash, _Pred, _Alloc >::reserve (size_type *__n*)** [inline]

Prepare the unordered_set for a specified number of elements.

Parameters

__n	Number of elements required.

Same as rehash(ceil(n / max_load_factor())).

Definition at line 809 of file unordered_set.h.

4.1033.4.46 template<typename _Value, typename _Hash = hash<_Value>, typename _Pred = equal_to<_Value>, typename _Alloc = allocator<_Value>> size_type std::unordered_set< _Value, _Hash, _Pred, _Alloc >::size ( ) const [inline], [noexcept]

Returns the size of the unordered_set.

Definition at line 303 of file unordered_set.h.

4.1033.4.47 template<typename _Value, typename _Hash = hash<_Value>, typename _Pred = equal_to<_Value>, typename _Alloc = allocator<_Value>> void std::unordered_set< _Value, _Hash, _Pred, _Alloc >::swap (unordered_set< _Value, _Hash, _Pred, _Alloc > & *__x*) [inline], [noexcept]

Swaps data with another unordered_set.

Parameters

__x	An unordered_set of the same element and allocator types.

This exchanges the elements between two sets in constant time. Note that the global std::swap() function is specialized such that std::swap(s1,s2) will feed to this function.

Definition at line 585 of file unordered_set.h.

4.1034.1 Detailed Description

template<typename _Key, typename _Hash, typename _Pred, typename _Allocator>class std::__debug::unordered_set< _Key, _Hash, _Pred, _Allocator >

Class std::unordered_set with safety/checking/debug instrumentation.

Definition at line 40 of file debug/unordered_set.

4.1034.2 Member Function Documentation

4.1034.2.1 void __gnu_debug::_Safe_unordered_container_base::_M_detach_all ( ) [protected], [inherited]

Detach all iterators, leaving them singular.

4.1034.2.2 void __gnu_debug::_Safe_sequence_base::_M_detach_singular ( ) [protected], [inherited]

Detach all singular iterators.

Postcondition

for all iterators i attached to this sequence, i->_M_version == _M_version.

4.1034.2.3 __gnu_cxx::__mutex& __gnu_debug::_Safe_sequence_base::_M_get_mutex ( ) throw) [protected], [inherited]

For use in _Safe_sequence.

Referenced by __gnu_debug::_Safe_sequence< _Sequence >::_M_transfer_from_if().

4.1034.2.4 void __gnu_debug::_Safe_sequence_base::_M_invalidate_all ( ) const [inline], [protected], [inherited]

Invalidates all iterators.

Definition at line 256 of file safe_base.h.

References __gnu_debug::_Safe_sequence_base::_M_version.

4.1034.2.5 void __gnu_debug::_Safe_unordered_container< unordered_set< _Value, _Hash, _Pred, _Alloc > >::_M_invalidate_if (_Predicate *__pred*) [protected], [inherited]

Invalidates all iterators `x` that reference this container, are not singular, and for which `__pred(x)` returns `true`. `__pred` will be invoked with the normal iterators nested in the safe ones.

4.1034.2.6 void __gnu_debug::_Safe_unordered_container< unordered_set< _Value, _Hash, _Pred, _Alloc > >::_M_invalidate_local_if (_Predicate *__pred*) [protected], [inherited]

Invalidates all local iterators `x` that reference this container, are not singular, and for which `__pred(x)` returns `true`. `__pred` will be invoked with the normal local iterators nested in the safe ones.

4.1034.2.7 void __gnu_debug::_Safe_sequence_base::_M_revalidate_singular ( ) [protected], [inherited]

Revalidates all attached singular iterators. This method may be used to validate iterators that were invalidated before (but for some reason, such as an exception, need to become valid again).

4.1034.2.8 void __gnu_debug::_Safe_unordered_container_base::_M_swap (_Safe_unordered_container_base & __x) [protected], [noexcept], [inherited]

Swap this container with the given container. This operation also swaps ownership of the iterators, so that when the operation is complete all iterators that originally referenced one container now reference the other container.

4.1034.2.9 void __gnu_debug::_Safe_sequence_base::_M_swap (_Safe_sequence_base & __x) [protected], [noexcept], [inherited]

Swap this sequence with the given sequence. This operation also swaps ownership of the iterators, so that when the operation is complete all iterators that originally referenced one container now reference the other container.

4.1034.3 Member Data Documentation

4.1034.3.1 _Safe_iterator_base* __gnu_debug::_Safe_sequence_base::_M_const_iterators [inherited]

The list of constant iterators that reference this container.

Definition at line 197 of file safe_base.h.

Referenced by __gnu_debug::_Safe_sequence< _Sequence >::_M_transfer_from_if().

4.1034.3.2 _Safe_iterator_base* __gnu_debug::_Safe_unordered_container_base::_M_const_local_iterators [inherited]

The list of constant local iterators that reference this container.

Definition at line 130 of file safe_unordered_base.h.

4.1034.3.3 _Safe_iterator_base* __gnu_debug::_Safe_sequence_base::_M_iterators [inherited]

The list of mutable iterators that reference this container.

Definition at line 194 of file safe_base.h.

Referenced by __gnu_debug::_Safe_sequence< _Sequence >::_M_transfer_from_if().

4.1034.3.4 _Safe_iterator_base* __gnu_debug::_Safe_unordered_container_base::_M_local_iterators [inherited]

The list of mutable local iterators that reference this container.

Definition at line 127 of file safe_unordered_base.h.

4.1034.3.5 unsigned int __gnu_debug::_Safe_sequence_base::_M_version [mutable], [inherited]

The container version number. This number may never be 0.

Definition at line 200 of file safe_base.h.

Referenced by __gnu_debug::_Safe_sequence_base::_M_invalidate_all().

Friends

- class **_Array< _Tp >**

4.1037.1 Detailed Description

template<class _Tp>class std::valarray< _Tp >

Smart array designed to support numeric processing.

A valarray is an array that provides constraints intended to allow for effective optimization of numeric array processing by reducing the aliasing that can result from pointer representations. It represents a one-dimensional array from which different multidimensional subsets can be accessed and modified.

Template Parameters

_Tp	Type of object in the array.

Definition at line 89 of file valarray.

4.1037.2 Constructor & Destructor Documentation

4.1037.2.1 template<class _Tp> std::valarray< _Tp >::valarray (const _Tp * __restrict__, size_t)

Construct an array initialized to the first *n* elements of *t*.

The documentation for this class was generated from the following file:

- valarray

4.1038.1 Detailed Description

template<typename _Tp, typename _Alloc = std::allocator<_Tp>>class std::vector< _Tp, _Alloc >

A standard container which offers fixed time access to individual elements in any order.

Template Parameters

_Tp	Type of element.
_Alloc	Allocator type, defaults to allocator<_Tp>.

Meets the requirements of a `container`, a `reversible container`, and a `sequence`, including the `optional sequence requirements` with the exception of `push_front` and `pop_front`.

In some terminology a vector can be described as a dynamic C-style array, it offers fast and efficient access to individual elements in any order and saves the user from worrying about memory and size allocation. Subscripting ([]) access is also provided as with C-style arrays.

Definition at line 389 of file stl_vector.h.

4.1038.2 Constructor & Destructor Documentation

4.1038.2.1 template<typename _Tp, typename _Alloc = std::allocator<_Tp>> std::vector< _Tp, _Alloc >::vector ( ) [default]

Creates a vector with no elements.

4.1038.2.2 template<typename _Tp, typename _Alloc = std::allocator<_Tp>> std::vector< _Tp, _Alloc >::vector (const allocator_type & *__a*) [inline], [explicit], [noexcept]

Creates a vector with no elements.

Parameters

__a	An allocator object.

Definition at line 497 of file stl_vector.h.

4.1038.2.3 template<typename _Tp, typename _Alloc = std::allocator<_Tp>> std::vector< _Tp, _Alloc >::vector (size_type __n, const allocator_type & __a = allocator_type()) [inline], [explicit]

Creates a vector with default constructed elements.

Parameters

__n	The number of elements to initially create.
__a	An allocator.

This constructor fills the vector with *__n* default constructed elements.

Definition at line 510 of file stl_vector.h.

4.1038.2.4 template<typename _Tp, typename _Alloc = std::allocator<_Tp>> std::vector< _Tp, _Alloc >::vector (size_type __n, const value_type & __value, const allocator_type & __a = allocator_type()) [inline]

Creates a vector with copies of an exemplar element.

Parameters

__n	The number of elements to initially create.
__value	An element to copy.
__a	An allocator.

This constructor fills the vector with *__n* copies of *__value*.

Definition at line 522 of file stl_vector.h.

4.1038.2.5 template<typename _Tp, typename _Alloc = std::allocator<_Tp>> std::vector< _Tp, _Alloc >::vector (const vector< _Tp, _Alloc > & __x) [inline]

Vector copy constructor.

Parameters

__x	A vector of identical element and allocator types.

All the elements of *__x* are copied, but any unused capacity in *__x* will not be copied (i.e. capacity() == size() in the new vector).

The newly-created vector uses a copy of the allocator object used by *__x* (unless the allocator traits dictate a different object).

Definition at line 553 of file stl_vector.h.

4.1038.2.6 template<typename _Tp, typename _Alloc = std::allocator<_Tp>> std::vector< _Tp, _Alloc >::vector (vector< _Tp, _Alloc > &&) [default], [noexcept]

Vector move constructor.

The newly-created vector contains the exact contents of the moved instance. The contents of the moved instance are a valid, but unspecified vector.

4.1038.2.7 template<typename _Tp, typename _Alloc = std::allocator<_Tp>> std::vector< _Tp, _Alloc >::vector (const vector< _Tp, _Alloc > & __x, const allocator_type & __a) [inline]

Copy constructor with alternative allocator.

Definition at line 575 of file stl_vector.h.

4.1038.2.8 template<typename _Tp, typename _Alloc = std::allocator<_Tp>> std::vector< _Tp, _Alloc >::vector (vector< _Tp, _Alloc > && *__rv,* const allocator_type & *__m*) [inline],[noexcept]

Move constructor with alternative allocator.

Definition at line 607 of file stl_vector.h.

4.1038.2.9 template<typename _Tp, typename _Alloc = std::allocator<_Tp>> std::vector< _Tp, _Alloc >::vector (initializer_list< value_type > *__l,* const allocator_type & *__a =* allocator_type()) [inline]

Builds a vector from an initializer list.

Parameters

__l	An initializer_list.
__a	An allocator.

Create a vector consisting of copies of the elements in the initializer_list *__l*.

This will call the element type's copy constructor N times (where N is *__l.size()*) and do no memory reallocation.

Definition at line 625 of file stl_vector.h.

4.1038.2.10 template<typename _Tp, typename _Alloc = std::allocator<_Tp>> template<typename _InputIterator , typename = std::_RequireInputIter<_InputIterator>> std::vector< _Tp, _Alloc >::vector (_InputIterator *__first,* _InputIterator *__last,* const allocator_type & *__a =* allocator_type()) [inline]

Builds a vector from a range.

Parameters

__first	An input iterator.
__last	An input iterator.
__a	An allocator.

Create a vector consisting of copies of the elements from [first,last).

If the iterators are forward, bidirectional, or random-access, then this will call the elements' copy constructor N times (where N is distance(first,last)) and do no memory reallocation. But if only input iterators are used, then this will do at most 2N calls to the copy constructor, and logN memory reallocations.

Definition at line 653 of file stl_vector.h.

4.1038.2.11 template<typename _Tp, typename _Alloc = std::allocator<_Tp>> std::vector< _Tp, _Alloc >::~vector ( ) [inline],[noexcept]

The dtor only erases the elements, and note that if the elements themselves are pointers, the pointed-to memory is not touched in any way. Managing the pointer is the user's responsibility.

Definition at line 678 of file stl_vector.h.

4.1038.3 Member Function Documentation

4.1038.3.1 template<typename _Tp, typename _Alloc = std::allocator<_Tp>> template<typename _ForwardIterator > pointer std::vector< _Tp, _Alloc >::_M_allocate_and_copy (size_type *__n,* _ForwardIterator *__first,* _ForwardIterator *__last*) [inline],[protected]

Memory expansion handler. Uses the member allocation function to obtain *n* bytes of memory, and then copies [first,last) into it.

Definition at line 1508 of file stl_vector.h.

4.1038.3.2 template<typename _Tp, typename _Alloc = std::allocator<_Tp>> void std::vector< _Tp, _Alloc >::_M_range_check (size_type __n) const [inline],[protected]

Safety check used only from at().

Definition at line 1070 of file stl_vector.h.

Referenced by std::vector< block_type, allocator_type >::at().

4.1038.3.3 template<typename _Tp, typename _Alloc = std::allocator<_Tp>> void std::vector< _Tp, _Alloc >::assign (size_type __n, const value_type & __val) [inline]

Assigns a given value to a vector.

Parameters

__n	Number of elements to be assigned.
__val	Value to be assigned.

This function fills a vector with *__n* copies of the given value. Note that the assignment completely changes the vector and that the resulting vector's size is the same as the number of elements assigned.

Definition at line 749 of file stl_vector.h.

4.1038.3.4 template<typename _Tp, typename _Alloc = std::allocator<_Tp>> template<typename _InputIterator , typename = std::_RequireInputIter<_InputIterator>> void std::vector< _Tp, _Alloc >::assign (_InputIterator __first, _InputIterator __last) [inline]

Assigns a range to a vector.

Parameters

__first	An input iterator.
__last	An input iterator.

This function fills a vector with copies of the elements in the range [__first,__last).

Note that the assignment completely changes the vector and that the resulting vector's size is the same as the number of elements assigned.

Definition at line 768 of file stl_vector.h.

4.1038.3.5 template<typename _Tp, typename _Alloc = std::allocator<_Tp>> void std::vector< _Tp, _Alloc >::assign (initializer_list< value_type > __l) [inline]

Assigns an initializer list to a vector.

Parameters

__l	An initializer_list.

This function fills a vector with copies of the elements in the initializer list *__l*.

Note that the assignment completely changes the vector and that the resulting vector's size is the same as the number of elements assigned.

Definition at line 794 of file stl_vector.h.

4.1038.3.6 template<typename _Tp, typename _Alloc = std::allocator<_Tp>> reference std::vector< _Tp, _Alloc >::at (size_type __n) [inline]

Provides access to the data contained in the vector.

Parameters

__n	The index of the element for which data should be accessed.

Returns

Read/write reference to data.

Exceptions

std::out_of_range	If *__n* is an invalid index.

This function provides for safer data access. The parameter is first checked that it is in the range of the vector. The function throws out_of_range if the check fails.

Definition at line 1092 of file stl_vector.h.

4.1038.3.7 template<typename _Tp, typename _Alloc = std::allocator<_Tp>> const_reference std::vector< _Tp, _Alloc >::at (size_type __n) const [inline]

Provides access to the data contained in the vector.

Parameters

__n	The index of the element for which data should be accessed.

Returns

Read-only (constant) reference to data.

Exceptions

std::out_of_range	If *__n* is an invalid index.

This function provides for safer data access. The parameter is first checked that it is in the range of the vector. The function throws out_of_range if the check fails.

Definition at line 1110 of file stl_vector.h.

4.1038.3.8 template<typename _Tp, typename _Alloc = std::allocator<_Tp>> reference std::vector< _Tp, _Alloc >::back ( ) [inline], [noexcept]

Returns a read/write reference to the data at the last element of the vector.

Definition at line 1143 of file stl_vector.h.

Referenced by std::piecewise_constant_distribution< _RealType >::max(), and std::piecewise_linear_distribution< _RealType >::max().

4.1038.3.9 template<typename _Tp, typename _Alloc = std::allocator<_Tp>> const_reference std::vector< _Tp, _Alloc >::back ( ) const [inline], [noexcept]

Returns a read-only (constant) reference to the data at the last element of the vector.

Definition at line 1154 of file stl_vector.h.

4.1038.3.10 template<typename _Tp, typename _Alloc = std::allocator<_Tp>> iterator std::vector< _Tp, _Alloc >::begin ( ) [inline], [noexcept]

Returns a read/write iterator that points to the first element in the vector. Iteration is done in ordinary element order.

Definition at line 811 of file stl_vector.h.

Referenced by std::vector< block_type, allocator_type >::crend(), std::vector< block_type, allocator_type >::empty(), std::vector< block_type, allocator_type >::erase(), std::vector< block_type, allocator_type >::front(), std::vector< block_type, allocator_type >::insert(), __gnu_parallel::multiseq_partition(), __gnu_parallel::multiseq_selection(), __gnu_parallel::multiway_merge_exact_splitting(), std::vector< _Tp, _Alloc >::operator=(), std::operator==(), std::vector< block_type, allocator_type >::rend(), and std::vector< block_type, allocator_type >::vector().

4.1038.3.11 template<typename _Tp, typename _Alloc = std::allocator<_Tp>> const_iterator std::vector< _Tp, _Alloc >::begin ( ) const [inline], [noexcept]

Returns a read-only (constant) iterator that points to the first element in the vector. Iteration is done in ordinary element order.

Definition at line 820 of file stl_vector.h.

4.1038.3.12 template<typename _Tp, typename _Alloc = std::allocator<_Tp>> size_type std::vector< _Tp, _Alloc >::capacity ( ) const [inline], [noexcept]

Returns the total number of elements that the vector can hold before needing to allocate more memory.

Definition at line 998 of file stl_vector.h.

4.1038.3.13 template<typename _Tp, typename _Alloc = std::allocator<_Tp>> const_iterator std::vector< _Tp, _Alloc >::cbegin ( ) const [inline], [noexcept]

Returns a read-only (constant) iterator that points to the first element in the vector. Iteration is done in ordinary element order.

Definition at line 884 of file stl_vector.h.

Referenced by std::vector< block_type, allocator_type >::erase(), and std::vector< block_type, allocator_type >::insert().

4.1038.3.14 template<typename _Tp, typename _Alloc = std::allocator<_Tp>> const_iterator std::vector< _Tp, _Alloc >::cend ( ) const [inline], [noexcept]

Returns a read-only (constant) iterator that points one past the last element in the vector. Iteration is done in ordinary element order.

Definition at line 893 of file stl_vector.h.

4.1038.3.15 template<typename _Tp, typename _Alloc = std::allocator<_Tp>> void std::vector< _Tp, _Alloc >::clear ( ) [inline], [noexcept]

Erases all the elements. Note that this function only erases the elements, and that if the elements themselves are pointers, the pointed-to memory is not touched in any way. Managing the pointer is the user's responsibility.

Definition at line 1498 of file stl_vector.h.

4.1038.3.16 template<typename _Tp, typename _Alloc = std::allocator<_Tp>> const_reverse_iterator std::vector< _Tp, _Alloc >::crbegin ( ) const [inline], [noexcept]

Returns a read-only (constant) reverse iterator that points to the last element in the vector. Iteration is done in reverse element order.

Definition at line 902 of file stl_vector.h.

4.1038.3.17 template<typename _Tp, typename _Alloc = std::allocator<_Tp>> const_reverse_iterator std::vector< _Tp, _Alloc >::crend ( ) const [inline], [noexcept]

Returns a read-only (constant) reverse iterator that points to one before the first element in the vector. Iteration is done in reverse element order.

Definition at line 911 of file stl_vector.h.

4.1038.3.18 template<typename _Tp, typename _Alloc = std::allocator<_Tp>> _Tp* std::vector< _Tp, _Alloc >::data ( ) [inline], [noexcept]

Returns a pointer such that [data(), data() + size()) is a valid range. For a non-empty vector, data() == &front().

Definition at line 1168 of file stl_vector.h.

Referenced by std::regex_traits< _CharType >::transform_primary().

4.1038.3.19 template<typename _Tp, typename _Alloc = std::allocator<_Tp>> template<typename... _Args> iterator std::vector< _Tp, _Alloc >::emplace (const_iterator *__position,* _Args &&... *__args*) [inline]

Inserts an object in vector before specified iterator.

Parameters

__position	A const_iterator into the vector.
__args	Arguments.

Returns

An iterator that points to the inserted data.

This function will insert an object of type T constructed with T(std::forward<Args>(args)...) before the specified location. Note that this kind of operation could be expensive for a vector and if it is frequently used the user should consider using std::list.

Definition at line 1248 of file stl_vector.h.

4.1038.3.20 template<typename _Tp, typename _Alloc = std::allocator<_Tp>> bool std::vector< _Tp, _Alloc >::empty ( ) const [inline], [noexcept]

Returns true if the vector is empty. (Thus begin() would equal end().)

Definition at line 1007 of file stl_vector.h.

Referenced by std::piecewise_constant_distribution< _RealType >::densities(), std::piecewise_linear_distribution< _RealType >::densities(), std::piecewise_constant_distribution< _RealType >::intervals(), std::piecewise_linear_distribution< _RealType >::intervals(), std::discrete_distribution< _IntType >::max(), std::piecewise_constant_distribution< _RealType >::max(), std::piecewise_linear_distribution< _RealType >::max(), std::piecewise_constant_distribution< _RealType >::min(), std::piecewise_linear_distribution< _RealType >::min(), and std::discrete_distribution< _IntType >::probabilities().

4.1038.3.21 template<typename _Tp, typename _Alloc = std::allocator<_Tp>> iterator std::vector< _Tp, _Alloc >::end ( ) [inline], [noexcept]

Returns a read/write iterator that points one past the last element in the vector. Iteration is done in ordinary element order.

Definition at line 829 of file stl_vector.h.

Referenced by std::vector< block_type, allocator_type >::back(), std::vector< block_type, allocator_type >::crbegin(), std::vector< block_type, allocator_type >::empty(), __gnu_parallel::multiseq_partition(), __gnu_parallel-

::multiseq_selection(), __gnu_parallel::multiway_merge_exact_splitting(), std::vector< _Tp, _Alloc >::operator=(), std::operator==(), std::vector< block_type, allocator_type >::push_back(), std::vector< block_type, allocator_type >::rbegin(), std::vector< block_type, allocator_type >::resize(), and std::vector< block_type, allocator_type >::vector().

4.1038.3.22 template<typename _Tp, typename _Alloc = std::allocator<_Tp>> const_iterator std::vector< _Tp, _Alloc >::end ( ) const [inline], [noexcept]

Returns a read-only (constant) iterator that points one past the last element in the vector. Iteration is done in ordinary element order.

Definition at line 838 of file stl_vector.h.

4.1038.3.23 template<typename _Tp, typename _Alloc = std::allocator<_Tp>> iterator std::vector< _Tp, _Alloc >::erase (const_iterator *__position*) [inline]

Remove element at given position.

Parameters

__position	Iterator pointing to element to be erased.

Returns

An iterator pointing to the next element (or end()).

This function will erase the element at the given position and thus shorten the vector by one.

Note This operation could be expensive and if it is frequently used the user should consider using std::list. The user is also cautioned that this function only erases the element, and that if the element is itself a pointer, the pointed-to memory is not touched in any way. Managing the pointer is the user's responsibility.

Definition at line 1430 of file stl_vector.h.

4.1038.3.24 template<typename _Tp, typename _Alloc = std::allocator<_Tp>> iterator std::vector< _Tp, _Alloc >::erase (const_iterator *__first,* const_iterator *__last*) [inline]

Remove a range of elements.

Parameters

__first	Iterator pointing to the first element to be erased.
__last	Iterator pointing to one past the last element to be erased.

Returns

An iterator pointing to the element pointed to by *__last* prior to erasing (or end()).

This function will erase the elements in the range [__first,__last) and shorten the vector accordingly.

Note This operation could be expensive and if it is frequently used the user should consider using std::list. The user is also cautioned that this function only erases the elements, and that if the elements themselves are pointers, the pointed-to memory is not touched in any way. Managing the pointer is the user's responsibility.

Definition at line 1457 of file stl_vector.h.

4.1038.3.25 template<typename _Tp, typename _Alloc = std::allocator<_Tp>> reference std::vector< _Tp, _Alloc >::front ( ) [inline], [noexcept]

Returns a read/write reference to the data at the first element of the vector.

Definition at line 1121 of file stl_vector.h.

Referenced by std::piecewise_constant_distribution< _RealType >::min(), and std::piecewise_linear_distribution< _RealType >::min().

4.1038.3.26 template<typename _Tp, typename _Alloc = std::allocator<_Tp>> const_reference std::vector< _Tp, _Alloc >::front ( ) const [inline], [noexcept]

Returns a read-only (constant) reference to the data at the first element of the vector.

Definition at line 1132 of file stl_vector.h.

4.1038.3.27 template<typename _Tp , typename _Alloc > vector< _Tp, _Alloc >::iterator vector::insert (const_iterator *__position,* const value_type & *__x*)

Inserts given value into vector before specified iterator.

Parameters

__position	A const_iterator into the vector.
__x	Data to be inserted.

Returns

An iterator that points to the inserted data.

This function will insert a copy of the given value before the specified location. Note that this kind of operation could be expensive for a vector and if it is frequently used the user should consider using std::list.

Definition at line 132 of file vector.tcc.

References std::begin(), std::cbegin(), std::end(), and std::move().

4.1038.3.28 template<typename _Tp, typename _Alloc = std::allocator<_Tp>> iterator std::vector< _Tp, _Alloc >::insert (const_iterator *__position,* value_type && *__x*) [inline]

Inserts given rvalue into vector before specified iterator.

Parameters

__position	A const_iterator into the vector.
__x	Data to be inserted.

Returns

An iterator that points to the inserted data.

This function will insert a copy of the given rvalue before the specified location. Note that this kind of operation could be expensive for a vector and if it is frequently used the user should consider using std::list.

Definition at line 1293 of file stl_vector.h.

4.1038.3.29 template<typename _Tp, typename _Alloc = std::allocator<_Tp>> iterator std::vector< _Tp, _Alloc >::insert (const_iterator *__position,* initializer_list< value_type > *__l*) [inline]

Inserts an initializer_list into the vector.

Parameters

__position	An iterator into the vector.
__l	An initializer_list.

This function will insert copies of the data in the initializer_list *l* into the vector before the location specified by *position*.

Note that this kind of operation could be expensive for a vector and if it is frequently used the user should consider using std::list.

Definition at line 1310 of file stl_vector.h.

4.1038.3.30 template<typename _Tp, typename _Alloc = std::allocator<_Tp>> iterator std::vector< _Tp, _Alloc >::insert (const_iterator *__position,* size_type *__n,* const value_type & *__x*) [inline]

Inserts a number of copies of given data into the vector.

Parameters

__position	A const_iterator into the vector.
__n	Number of elements to be inserted.
__x	Data to be inserted.

Returns

An iterator that points to the inserted data.

This function will insert a specified number of copies of the given data before the location specified by *position*.

Note that this kind of operation could be expensive for a vector and if it is frequently used the user should consider using std::list.

Definition at line 1335 of file stl_vector.h.

4.1038.3.31 template<typename _Tp, typename _Alloc = std::allocator<_Tp>> template<typename _InputIterator , typename = std::_RequireInputIter<_InputIterator>> iterator std::vector< _Tp, _Alloc >::insert (const_iterator *__position,* _InputIterator *__first,* _InputIterator *__last*) [inline]

Inserts a range into the vector.

Parameters

__position	A const_iterator into the vector.
__first	An input iterator.
__last	An input iterator.

Returns

An iterator that points to the inserted data.

This function will insert copies of the data in the range [__first,__last) into the vector before the location specified by *pos*.

Note that this kind of operation could be expensive for a vector and if it is frequently used the user should consider using std::list.

Definition at line 1379 of file stl_vector.h.

4.1038.3.32 template<typename _Tp, typename _Alloc = std::allocator<_Tp>> size_type std::vector< _Tp, _Alloc >::max_size ( ) const [inline], [noexcept]

Returns the size() of the largest possible vector.

Definition at line 923 of file stl_vector.h.

4.1038.3.33 template<typename _Tp , typename _Alloc > vector< _Tp, _Alloc > & vector::operator= (const vector< _Tp, _Alloc > & __x)

Vector assignment operator.

Parameters

__x	A vector of identical element and allocator types.

All the elements of *__x* are copied, but any unused capacity in *__x* will not be copied.

Whether the allocator is copied depends on the allocator traits.

Definition at line 199 of file vector.tcc.

References std::_Destroy(), std::vector< _Tp, _Alloc >::begin(), std::begin(), std::vector< _Tp, _Alloc >::end(), std::end(), and std::vector< _Tp, _Alloc >::size().

4.1038.3.34 template<typename _Tp, typename _Alloc = std::allocator<_Tp>> vector& std::vector< _Tp, _Alloc >::operator= (vector< _Tp, _Alloc > && __x) [inline], [noexcept]

Vector move assignment operator.

Parameters

__x	A vector of identical element and allocator types.

The contents of *__x* are moved into this vector (without copying, if the allocators permit it). Afterwards *__x* is a valid, but unspecified vector.

Whether the allocator is moved depends on the allocator traits.

Definition at line 709 of file stl_vector.h.

4.1038.3.35 template<typename _Tp, typename _Alloc = std::allocator<_Tp>> vector& std::vector< _Tp, _Alloc >::operator= (initializer_list< value_type > __l) [inline]

Vector list assignment operator.

Parameters

__l	An initializer_list.

This function fills a vector with copies of the elements in the initializer list *__l*.

Note that the assignment completely changes the vector and that the resulting vector's size is the same as the number of elements assigned.

Definition at line 730 of file stl_vector.h.

4.1038.3.36 template<typename _Tp, typename _Alloc = std::allocator<_Tp>> reference std::vector< _Tp, _Alloc >::operator[] (size_type __n) [inline], [noexcept]

Subscript access to the data contained in the vector.

Parameters

__n	The index of the element for which data should be accessed.

Returns

Read/write reference to data.

This operator allows for easy, array-style, data access. Note that data access with this operator is unchecked and out_of_range lookups are not defined. (For checked lookups see at().)

Definition at line 1043 of file stl_vector.h.

4.1038.3.37 template<typename _Tp, typename _Alloc = std::allocator<_Tp>> const_reference std::vector< _Tp, _Alloc >::operator[] (size_type __n) const [inline], [noexcept]

Subscript access to the data contained in the vector.

Parameters

__n	The index of the element for which data should be accessed.

Returns

Read-only (constant) reference to data.

This operator allows for easy, array-style, data access. Note that data access with this operator is unchecked and out_of_range lookups are not defined. (For checked lookups see at().)

Definition at line 1061 of file stl_vector.h.

4.1038.3.38 template<typename _Tp, typename _Alloc = std::allocator<_Tp>> void std::vector< _Tp, _Alloc >::pop_back ( ) [inline], [noexcept]

Removes last element.

This is a typical stack operation. It shrinks the vector by one.

Note that no data is returned, and if the last element's data is needed, it should be retrieved before pop_back() is called.

Definition at line 1225 of file stl_vector.h.

4.1038.3.39 template<typename _Tp, typename _Alloc = std::allocator<_Tp>> void std::vector< _Tp, _Alloc >::push_back (const value_type & __x) [inline]

Add data to the end of the vector.

Parameters

__x	Data to be added.

This is a typical stack operation. The function creates an element at the end of the vector and assigns the given data to it. Due to the nature of a vector this operation can be done in constant time if the vector has preallocated space available.

Definition at line 1187 of file stl_vector.h.

Referenced by __gnu_parallel::multiseq_partition(), and __gnu_parallel::multiseq_selection().

4.1038.3.40 template<typename _Tp, typename _Alloc = std::allocator<_Tp>> reverse_iterator std::vector< _Tp, _Alloc >::rbegin ( ) [inline], [noexcept]

Returns a read/write reverse iterator that points to the last element in the vector. Iteration is done in reverse element order.

Definition at line 847 of file stl_vector.h.

4.1038.3.41 template<typename _Tp, typename _Alloc = std::allocator<_Tp>> const_reverse_iterator std::vector< _Tp, _Alloc >::rbegin ( ) const [inline], [noexcept]

Returns a read-only (constant) reverse iterator that points to the last element in the vector. Iteration is done in reverse element order.

Definition at line 856 of file stl_vector.h.

4.1038.3.42 template<typename _Tp, typename _Alloc = std::allocator<_Tp>> reverse_iterator std::vector< _Tp, _Alloc >::rend ( ) [inline], [noexcept]

Returns a read/write reverse iterator that points to one before the first element in the vector. Iteration is done in reverse element order.

Definition at line 865 of file stl_vector.h.

4.1038.3.43 template<typename _Tp, typename _Alloc = std::allocator<_Tp>> const_reverse_iterator std::vector< _Tp, _Alloc >::rend ( ) const [inline], [noexcept]

Returns a read-only (constant) reverse iterator that points to one before the first element in the vector. Iteration is done in reverse element order.

Definition at line 874 of file stl_vector.h.

4.1038.3.44 template<typename _Tp , typename _Alloc > void vector::reserve (size_type __n)

Attempt to preallocate enough memory for specified number of elements.

Parameters

__n	Number of elements required.

Exceptions

std::length_error	If *n* exceeds `max_size()`.

This function attempts to reserve enough memory for the vector to hold the specified number of elements. If the number requested is more than max_size(), length_error is thrown.

The advantage of this function is that if optimal code is a necessity and the user can determine the number of elements that will be required, the user can reserve the memory in advance, and thus prevent a possible reallocation of memory and copying of vector data.

Definition at line 67 of file vector.tcc.

References std::_Destroy().

4.1038.3.45 template<typename _Tp, typename _Alloc = std::allocator<_Tp>> void std::vector< _Tp, _Alloc >::resize (size_type __new_size) [inline]

Resizes the vector to the specified number of elements.

Parameters

__new_size	Number of elements the vector should contain.

This function will resize the vector to the specified number of elements. If the number is smaller than the vector's current size the vector is truncated, otherwise default constructed elements are appended.

Definition at line 937 of file stl_vector.h.

Referenced by __gnu_parallel::__shrink_and_double(), and __gnu_parallel::multiway_merge_exact_splitting().

4.1038.3.46 template<typename _Tp, typename _Alloc = std::allocator<_Tp>> void std::vector< _Tp, _Alloc >::resize (size_type __new_size, const value_type & __x) [inline]

Resizes the vector to the specified number of elements.

Parameters

__new_size	Number of elements the vector should contain.
__x	Data with which new elements should be populated.

This function will resize the vector to the specified number of elements. If the number is smaller than the vector's current size the vector is truncated, otherwise the vector is extended and new elements are populated with given data.

Definition at line 957 of file stl_vector.h.

4.1038.3.47 template<typename _Tp, typename _Alloc = std::allocator<_Tp>> void std::vector< _Tp, _Alloc >::shrink_to_fit ( ) [inline]

A non-binding request to reduce capacity() to size().

Definition at line 989 of file stl_vector.h.

4.1038.3.48 template<typename _Tp, typename _Alloc = std::allocator<_Tp>> size_type std::vector< _Tp, _Alloc >::size ( ) const [inline], [noexcept]

Returns the number of elements in the vector.

Definition at line 918 of file stl_vector.h.

Referenced by __gnu_parallel::__shrink(), __gnu_parallel::__shrink_and_double(), std::vector< block_type, allocator_type >::_M_range_check(), __gnu_parallel::list_partition(), std::discrete_distribution< _IntType >::max(), std::vector< _Tp, _Alloc >::operator=(), std::operator==(), std::vector< block_type, allocator_type >::resize(), and std::regex_traits< _CharType >::transform_primary().

4.1038.3.49 template<typename _Tp, typename _Alloc = std::allocator<_Tp>> void std::vector< _Tp, _Alloc >::swap (vector< _Tp, _Alloc > & *__x*) [inline], [noexcept]

Swaps data with another vector.

Parameters

__x	A vector of the same element and allocator types.

This exchanges the elements between two vectors in constant time. (Three pointers, so it should be quite fast.) Note that the global std::swap() function is specialized such that std::swap(v1,v2) will feed to this function.

Whether the allocators are swapped depends on the allocator traits.

Definition at line 1480 of file stl_vector.h.

4.1039.1 Detailed Description

template<typename _Tp, typename _Allocator>class std::__debug::vector< _Tp, _Allocator >

Class std::vector with safety/checking/debug instrumentation.

Definition at line 36 of file debug/vector.

4.1039.2 Constructor & Destructor Documentation

4.1039.2.1 template<typename _Tp, typename _Allocator> std::__debug::vector< _Tp, _Allocator >::vector (const _Base & __x) [inline]

Construction from a normal-mode vector.

Definition at line 224 of file debug/vector.

4.1039.3 Member Function Documentation

4.1039.3.1 void __gnu_debug::_Safe_sequence_base::_M_detach_all ( ) [protected], [inherited]

Detach all iterators, leaving them singular.

Referenced by __gnu_debug::_Safe_sequence_base::~_Safe_sequence_base().

4.1039.3.2 void __gnu_debug::_Safe_sequence_base::_M_detach_singular ( ) [protected], [inherited]

Detach all singular iterators.

Postcondition

for all iterators i attached to this sequence, i->_M_version == _M_version.

4.1039.3.3 __gnu_cxx::__mutex& __gnu_debug::_Safe_sequence_base::_M_get_mutex ( ) throw) [protected], [inherited]

For use in _Safe_sequence.

Referenced by __gnu_debug::_Safe_sequence< _Sequence >::_M_transfer_from_if().

4.1039.3.4 void __gnu_debug::_Safe_sequence_base::_M_invalidate_all ( ) const [inline], [protected], [inherited]

Invalidates all iterators.

Definition at line 256 of file safe_base.h.

References __gnu_debug::_Safe_sequence_base::_M_version.

4.1039.3.5 void __gnu_debug::_Safe_sequence< vector< _Tp, _Allocator > >::_M_invalidate_if (_Predicate __pred) [inherited]

Invalidates all iterators `x` that reference this sequence, are not singular, and for which `__pred(x)` returns `true`. `__pred` will be invoked with the normal iterators nested in the safe ones.

4.1039.3.6 void __gnu_debug::_Safe_sequence_base::_M_revalidate_singular ( ) [protected], [inherited]

Revalidates all attached singular iterators. This method may be used to validate iterators that were invalidated before (but for some reason, such as an exception, need to become valid again).

4.1039.3.7 void __gnu_debug::_Safe_sequence_base::_M_swap (_Safe_sequence_base & __x) [protected], [noexcept], [inherited]

Swap this sequence with the given sequence. This operation also swaps ownership of the iterators, so that when the operation is complete all iterators that originally referenced one container now reference the other container.

4.1039.3.8 void __gnu_debug::_Safe_sequence< vector< _Tp, _Allocator > >::_M_transfer_from_if (_Safe_sequence< vector< _Tp, _Allocator > > & __from, _Predicate __pred) [inherited]

Transfers all iterators `x` that reference `from` sequence, are not singular, and for which `__pred(x)` returns `true`. `__pred` will be invoked with the normal iterators nested in the safe ones.

4.1039.4 Member Data Documentation

4.1039.4.1 _Safe_iterator_base* __gnu_debug::_Safe_sequence_base::_M_const_iterators [inherited]

The list of constant iterators that reference this container.

Definition at line 197 of file safe_base.h.

Referenced by __gnu_debug::_Safe_sequence< _Sequence >::_M_transfer_from_if().

4.1039.4.2 _Safe_iterator_base* __gnu_debug::_Safe_sequence_base::_M_iterators [inherited]

The list of mutable iterators that reference this container.

Definition at line 194 of file safe_base.h.

Referenced by __gnu_debug::_Safe_sequence< _Sequence >::_M_transfer_from_if().

4.1039.4.3 unsigned int __gnu_debug::_Safe_sequence_base::_M_version [mutable], [inherited]

The container version number. This number may never be 0.

Definition at line 200 of file safe_base.h.

Referenced by __gnu_debug::_Safe_sequence_base::_M_invalidate_all().

4.1040.1 Detailed Description

template<typename _Alloc>class std::vector< bool, _Alloc >

A specialization of vector for booleans which offers fixed time access to individual elements in any order.

Template Parameters

_Alloc	Allocator type.

Note that vector<bool> does not actually meet the requirements for being a container. This is because the reference and pointer types are not really references and pointers to bool. See DR96 for details.

See Also

vector for function documentation.

In some terminology a vector can be described as a dynamic C-style array, it offers fast and efficient access to individual elements in any order and saves the user from worrying about memory and size allocation. Subscripting ([]) access is also provided as with C-style arrays.

Definition at line 615 of file stl_bvector.h.

4.1041.1 Detailed Description

template<typename _Codecvt, typename _Elem = wchar_t, typename _Tr = char_traits<_Elem>>class std::wbuffer_convert< _Codecvt, _Elem, _Tr >

Buffer conversions.

Definition at line 387 of file locale_conv.h.

4.1041.2 Member Typedef Documentation

4.1041.2.1 typedef basic_streambuf<char_type, traits_type> std::basic_streambuf< _Elem , _Tr >::__streambuf_type [inherited]

This is a non-standard type.

Definition at line 140 of file streambuf.

4.1041.2.2 typedef _Elem std::basic_streambuf< _Elem , _Tr >::char_type [inherited]

These are standard types. They permit a standardized way of referring to names of (or names dependent on) the template parameters, which are specific to the implementation.

Definition at line 131 of file streambuf.

4.1041.2.3 typedef traits_type::int_type std::basic_streambuf< _Elem , _Tr >::int_type [inherited]

These are standard types. They permit a standardized way of referring to names of (or names dependent on) the template parameters, which are specific to the implementation.

Definition at line 133 of file streambuf.

4.1041.2.4 typedef traits_type::off_type std::basic_streambuf< _Elem , _Tr >::off_type [inherited]

These are standard types. They permit a standardized way of referring to names of (or names dependent on) the template parameters, which are specific to the implementation.

Definition at line 135 of file streambuf.

4.1041.2.5 typedef traits_type::pos_type std::basic_streambuf< _Elem , _Tr >::pos_type [inherited]

These are standard types. They permit a standardized way of referring to names of (or names dependent on) the template parameters, which are specific to the implementation.

Definition at line 134 of file streambuf.

4.1041.2.6 typedef _Tr std::basic_streambuf< _Elem , _Tr >::traits_type [inherited]

These are standard types. They permit a standardized way of referring to names of (or names dependent on) the template parameters, which are specific to the implementation.

Definition at line 132 of file streambuf.

4.1041.3 Constructor & Destructor Documentation

4.1041.3.1 template<typename _Codecvt , typename _Elem = wchar_t, typename _Tr = char_traits<_Elem>> std::wbuffer_convert< _Codecvt, _Elem, _Tr >::wbuffer_convert ( ) [inline]

Default constructor.

Definition at line 395 of file locale_conv.h.

4.1041.3.2 template<typename _Codecvt , typename _Elem = wchar_t, typename _Tr = char_traits<_Elem>> std::wbuffer_convert< _Codecvt, _Elem, _Tr >::wbuffer_convert (streambuf * *__bytebuf*, _Codecvt * *__pcvt* = new _Codecvt, state_type *__state* = state_type()) [inline], [explicit]

Constructor.

Parameters

__bytebuf	The underlying byte stream buffer.
__pcvt	The facet to use for conversions.
__state	Initial conversion state.

Takes ownership of __pcvt and will delete it in the destructor.

Definition at line 406 of file locale_conv.h.

References std::basic_streambuf< _Elem, _Tr >::setg(), and std::basic_streambuf< _Elem, _Tr >::setp().

4.1041.4 Member Function Documentation

4.1041.4.1 char_type* std::basic_streambuf< _Elem , _Tr >::eback ( ) const [inline], [protected], [inherited]

Access to the get area.

These functions are only available to other protected functions, including derived classes.

- eback() returns the beginning pointer for the input sequence
- gptr() returns the next pointer for the input sequence
- egptr() returns the end pointer for the input sequence

Definition at line 489 of file streambuf.

References std::basic_streambuf< _CharT, _Traits >::_M_in_beg.

4.1041.4.2 char_type* std::basic_streambuf< _Elem , _Tr >::egptr ( ) const [inline], [protected], [inherited]

Access to the get area.

These functions are only available to other protected functions, including derived classes.

- eback() returns the beginning pointer for the input sequence
- gptr() returns the next pointer for the input sequence
- egptr() returns the end pointer for the input sequence

Definition at line 495 of file streambuf.

References std::basic_streambuf< _CharT, _Traits >::_M_in_end.

Referenced by std::wbuffer_convert< _Codecvt, _Elem, _Tr >::underflow().

4.1041.4.3 char_type* std::basic_streambuf< _Elem , _Tr >::epptr ( ) const [inline], [protected], [inherited]

Access to the put area.

These functions are only available to other protected functions, including derived classes.

- pbase() returns the beginning pointer for the output sequence
- pptr() returns the next pointer for the output sequence
- epptr() returns the end pointer for the output sequence

Definition at line 542 of file streambuf.

References std::basic_streambuf< _CharT, _Traits >::_M_out_end.

4.1041.4.4 void std::basic_streambuf< _Elem , _Tr >::gbump (int __n) [inline], [protected], [inherited]

Moving the read position.

Parameters

__n	The delta by which to move.

This just advances the read position without returning any data.

Definition at line 505 of file streambuf.

References std::basic_streambuf< _CharT, _Traits >::_M_in_cur.

4.1041.4.5 locale std::basic_streambuf< _Elem , _Tr >::getloc ( ) const [inline], [inherited]

Locale access.

Returns

The current locale in effect.

If pubimbue(loc) has been called, then the most recent `loc` is returned. Otherwise the global locale in effect at the time of construction is returned.

Definition at line 233 of file streambuf.

References std::basic_streambuf< _CharT, _Traits >::_M_buf_locale.

4.1041.4.6 char_type* std::basic_streambuf< _Elem , _Tr >::gptr ( ) const [inline], [protected], [inherited]

Access to the get area.

These functions are only available to other protected functions, including derived classes.

- eback() returns the beginning pointer for the input sequence
- gptr() returns the next pointer for the input sequence
- egptr() returns the end pointer for the input sequence

Definition at line 492 of file streambuf.

References std::basic_streambuf< _CharT, _Traits >::_M_in_cur.

Referenced by std::wbuffer_convert< _Codecvt, _Elem, _Tr >::underflow().

4.1041.4.7 virtual void std::basic_streambuf< _Elem , _Tr >::imbue (const locale & *__loc*) [inline], [protected], [virtual], [inherited]

Changes translations.

Parameters

__loc	A new locale.

Translations done during I/O which depend on the current locale are changed by this call. The standard adds, *Between invocations of this function a class derived from streambuf can safely cache results of calls to locale functions and to members of facets so obtained.*

Note

Base class version does nothing.

Definition at line 583 of file streambuf.

4.1041.4.8 streamsize std::basic_streambuf< _Elem , _Tr >::in_avail ( ) [inline], [inherited]

Looking ahead into the stream.

Returns

The number of characters available.

If a read position is available, returns the number of characters available for reading before the buffer must be refilled. Otherwise returns the derived `showmanyc()`.

Definition at line 291 of file streambuf.

References std::basic_streambuf< _CharT, _Traits >::egptr(), std::basic_streambuf< _CharT, _Traits >::gptr(), and std::basic_streambuf< _CharT, _Traits >::showmanyc().

4.1041.4.9 template<typename _Codecvt , typename _Elem = wchar_t, typename _Tr = char_traits<_Elem>> _Wide_streambuf::int_type std::wbuffer_convert< _Codecvt, _Elem, _Tr >::overflow (typename _Wide_streambuf::int_type *__c*) [inline], [protected], [virtual]

Consumes data from the buffer; writes to the controlled sequence.

Parameters

__c	An additional character to consume.

Returns

eof() to indicate failure, something else (usually __*c*, or not_eof())

Informally, this function is called when the output buffer is full (or does not exist, as buffering need not actually be done). If a buffer exists, it is *consumed*, with *some effect* on the controlled sequence. (Typically, the buffer is written out to the sequence verbatim.) In either case, the character *c* is also written out, if __*c* is not `eof()`.

For a formal definition of this function, see a good text such as Langer & Kreft, or [27.5.2.4.5]/3-7.

A functioning output streambuf can be created by overriding only this function (no buffer area will be used).

Note

Base class version does nothing, returns eof().

Reimplemented from std::basic_streambuf< _Elem, _Tr >.

Definition at line 450 of file locale_conv.h.

References std::basic_streambuf< _Elem, _Tr >::sputc().

4.1041.4.10 virtual int_type std::basic_streambuf< _Elem , _Tr >::pbackfail (int_type __c = traits_type::eof()) [inline], [protected], [virtual], [inherited]

Tries to back up the input sequence.

Parameters

__c	The character to be inserted back into the sequence.

Returns

eof() on failure, *some other value* on success

Postcondition

The constraints of `gptr()`, `eback()`, and `pptr()` are the same as for `underflow()`.

Note

Base class version does nothing, returns eof().

Definition at line 731 of file streambuf.

4.1041.4.11 char_type* std::basic_streambuf< _Elem , _Tr >::pbase ( ) const [inline], [protected], [inherited]

Access to the put area.

These functions are only available to other protected functions, including derived classes.

- pbase() returns the beginning pointer for the output sequence
- pptr() returns the next pointer for the output sequence
- epptr() returns the end pointer for the output sequence

Definition at line 536 of file streambuf.

References std::basic_streambuf< _CharT, _Traits >::_M_out_beg.

4.1041.4.12 void std::basic_streambuf< _Elem , _Tr >::pbump (int __n) [inline], [protected], [inherited]

Moving the write position.

Parameters

__n	The delta by which to move.

This just advances the write position without returning any data.

Definition at line 552 of file streambuf.

References std::basic_streambuf< _CharT, _Traits >::_M_out_cur.

4.1041.4.13 char_type* std::basic_streambuf< _Elem , _Tr >::pptr ( ) const [inline], [protected], [inherited]

Access to the put area.

These functions are only available to other protected functions, including derived classes.

- pbase() returns the beginning pointer for the output sequence
- pptr() returns the next pointer for the output sequence
- epptr() returns the end pointer for the output sequence

Definition at line 539 of file streambuf.

References std::basic_streambuf< _CharT, _Traits >::_M_out_cur.

4.1041.4.14 locale std::basic_streambuf< _Elem , _Tr >::pubimbue (const locale & *__loc*) [inline], [inherited]

Entry point for imbue().

Parameters

__loc	The new locale.

Returns

The previous locale.

Calls the derived imbue(__loc).

Definition at line 216 of file streambuf.

References std::basic_streambuf< _CharT, _Traits >::_M_buf_locale, std::basic_streambuf< _CharT, _Traits >::getloc(), and std::basic_streambuf< _CharT, _Traits >::imbue().

4.1041.4.15 pos_type std::basic_streambuf< _Elem , _Tr >::pubseekoff (off_type *__off,* ios_base::seekdir *__way,* ios_base::openmode *__mode* = ios_base::in | ios_base::out) [inline], [inherited]

Alters the stream position.

Parameters

__off	Offset.
__way	Value for ios_base::seekdir.

__mode	Value for ios_base::openmode.

Calls virtual seekoff function.

Definition at line 258 of file streambuf.

References std::basic_streambuf< _CharT, _Traits >::seekoff().

4.1041.4.16 pos_type std::basic_streambuf< _Elem , _Tr >::pubseekpos (pos_type *__sp,* ios_base::openmode *__mode =* ios_base::in | ios_base::out) [inline], [inherited]

Alters the stream position.

Parameters

__sp	Position
__mode	Value for ios_base::openmode.

Calls virtual seekpos function.

Definition at line 270 of file streambuf.

References std::basic_streambuf< _CharT, _Traits >::seekpos().

4.1041.4.17 basic_streambuf* std::basic_streambuf< _Elem , _Tr >::pubsetbuf (char_type * *__s,* streamsize *__n*) [inline], [inherited]

Entry points for derived buffer functions.

The public versions of `pubfoo` dispatch to the protected derived `foo` member functions, passing the arguments (if any) and returning the result unchanged.

Definition at line 246 of file streambuf.

References std::basic_streambuf< _CharT, _Traits >::setbuf().

4.1041.4.18 int std::basic_streambuf< _Elem , _Tr >::pubsync ( ) [inline], [inherited]

Calls virtual sync function.

Definition at line 278 of file streambuf.

References std::basic_streambuf< _CharT, _Traits >::sync().

4.1041.4.19 int_type std::basic_streambuf< _Elem , _Tr >::sbumpc ( ) [inline], [inherited]

Getting the next character.

Returns

The next character, or eof.

If the input read position is available, returns that character and increments the read pointer, otherwise calls and returns `uflow()`.

Definition at line 323 of file streambuf.

References std::basic_streambuf< _CharT, _Traits >::egptr(), std::basic_streambuf< _CharT, _Traits >::gbump(), std::basic_streambuf< _CharT, _Traits >::gptr(), and std::basic_streambuf< _CharT, _Traits >::uflow().

4.1041.4.20 virtual **pos_type std::basic_streambuf< _Elem , _Tr >::seekoff (off_type , ios_base::seekdir , ios_base::openmode =** `ios_base::in | ios_base::out` **)** `[inline], [protected], [virtual], [inherited]`

Alters the stream positions.

Each derived class provides its own appropriate behavior.

Note

Base class version does nothing, returns a `pos_type` that represents an invalid stream position.

Definition at line 609 of file streambuf.

4.1041.4.21 virtual **pos_type std::basic_streambuf< _Elem , _Tr >::seekpos (pos_type , ios_base::openmode =** `ios_base::in | ios_base::out` **)** `[inline], [protected], [virtual], [inherited]`

Alters the stream positions.

Each derived class provides its own appropriate behavior.

Note

Base class version does nothing, returns a `pos_type` that represents an invalid stream position.

Definition at line 621 of file streambuf.

4.1041.4.22 virtual **basic_streambuf<char_type,_Tr >* std::basic_streambuf< _Elem , _Tr >::setbuf (char_type * , streamsize)** `[inline], [protected], [virtual], [inherited]`

Manipulates the buffer.

Each derived class provides its own appropriate behavior. See the next-to-last paragraph of https://gcc.gnu.org/onlinedocs/libstdc++/manual/streambufs.html#io.streambuf.buffering for more on this function.

Note

Base class version does nothing, returns `this`.

Definition at line 598 of file streambuf.

4.1041.4.23 void **std::basic_streambuf< _Elem , _Tr >::setg (char_type * *__gbeg*, char_type * *__gnext*, char_type * *__gend*)** `[inline], [protected], [inherited]`

Setting the three read area pointers.

Parameters

__gbeg	A pointer.
__gnext	A pointer.
__gend	A pointer.

Postcondition

__gbeg == `eback()`, *__gnext* == `gptr()`, and *__gend* == `egptr()`

Definition at line 516 of file streambuf.

References std::basic_streambuf< _CharT, _Traits >::_M_in_beg, std::basic_streambuf< _CharT, _Traits >::_M_in_cur, and std::basic_streambuf< _CharT, _Traits >::_M_in_end.

Referenced by std::wbuffer_convert< _Codecvt, _Elem, _Tr >::wbuffer_convert().

4.1041.4.24 void std::basic_streambuf< _Elem , _Tr >::setp (char_type * *__pbeg,* char_type * *__pend*) [inline], [protected], [inherited]

Setting the three write area pointers.

Parameters

__pbeg	A pointer.
__pend	A pointer.

Postcondition

__pbeg == `pbase()`, *__pbeg* == `pptr()`, and *__pend* == `epptr()`

Definition at line 562 of file streambuf.

References std::basic_streambuf< _CharT, _Traits >::_M_out_beg, std::basic_streambuf< _CharT, _Traits >::_M_out_cur, and std::basic_streambuf< _CharT, _Traits >::_M_out_end.

Referenced by std::wbuffer_convert< _Codecvt, _Elem, _Tr >::wbuffer_convert().

4.1041.4.25 int_type std::basic_streambuf< _Elem , _Tr >::sgetc ( ) [inline], [inherited]

Getting the next character.

Returns

The next character, or eof.

If the input read position is available, returns that character, otherwise calls and returns `underflow()`. Does not move the read position after fetching the character.

Definition at line 345 of file streambuf.

References std::basic_streambuf< _CharT, _Traits >::egptr(), std::basic_streambuf< _CharT, _Traits >::gptr(), and std::basic_streambuf< _CharT, _Traits >::underflow().

4.1041.4.26 streamsize std::basic_streambuf< _Elem , _Tr >::sgetn (char_type * *__s,* streamsize *__n*) [inline], [inherited]

Entry point for xsgetn.

Parameters

__s	A buffer area.
__n	A count.

Returns xsgetn(__s,__n). The effect is to fill *__s*[0] through *__s*[__n-1] with characters from the input sequence, if possible.

Definition at line 364 of file streambuf.

References std::basic_streambuf< _CharT, _Traits >::xsgetn().

4.1041.4.27 virtual streamsize std::basic_streambuf< _Elem , _Tr >::showmanyc ( ) [inline], [protected], [virtual], [inherited]

Investigating the data available.

Returns

An estimate of the number of characters available in the input sequence, or -1.

If it returns a positive value, then successive calls to `underflow()` *will not return* `traits::eof()` *until at least that number of characters have been supplied. If* `showmanyc()` *returns -1, then calls to* `underflow()` *or* `uflow()` *will fail.* [27.5.2.4.3]/1

Note

Base class version does nothing, returns zero.
The standard adds that *the intention is not only that the calls [to underflow or uflow] will not return* `eof()` *but that they will return immediately.*
The standard adds that *the morphemes of* `showmanyc` *are* ***es-how-many-see****, not* ***show-manic****.*

Definition at line 656 of file streambuf.

4.1041.4.28 int_type std::basic_streambuf< _Elem , _Tr >::snextc ( ) [inline], [inherited]

Getting the next character.

Returns

The next character, or eof.

Calls `sbumpc()`, and if that function returns `traits::eof()`, so does this function. Otherwise, `sgetc()`.

Definition at line 305 of file streambuf.

References std::basic_streambuf< _CharT, _Traits >::sbumpc(), and std::basic_streambuf< _CharT, _Traits >::sgetc().

4.1041.4.29 int_type std::basic_streambuf< _Elem , _Tr >::sputbackc (char_type *__c*) [inline], [inherited]

Pushing characters back into the input stream.

Parameters

__c	The character to push back.

Returns

The previous character, if possible.

Similar to sungetc(), but __*c* is pushed onto the stream instead of *the previous character.* If successful, the next character fetched from the input stream will be __*c*.

Definition at line 379 of file streambuf.

References std::basic_streambuf< _CharT, _Traits >::eback(), std::basic_streambuf< _CharT, _Traits >::gbump(), std::basic_streambuf< _CharT, _Traits >::gptr(), and std::basic_streambuf< _CharT, _Traits >::pbackfail().

4.1041.4.30 int_type std::basic_streambuf< _Elem , _Tr >::sputc (char_type __c) [inline], [inherited]

Entry point for all single-character output functions.

Parameters

__*c*	A character to output.

Returns

__*c*, if possible.

One of two public output functions.

If a write position is available for the output sequence (i.e., the buffer is not full), stores __*c* in that position, increments the position, and returns `traits::to_int_type(__c)`. If a write position is not available, returns `overflow(__c)`.

Definition at line 431 of file streambuf.

References std::basic_streambuf< _CharT, _Traits >::epptr(), std::basic_streambuf< _CharT, _Traits >::overflow(), std::basic_streambuf< _CharT, _Traits >::pbump(), and std::basic_streambuf< _CharT, _Traits >::pptr().

Referenced by std::wbuffer_convert< _Codecvt, _Elem, _Tr >::overflow().

4.1041.4.31 streamsize std::basic_streambuf< _Elem , _Tr >::sputn (const char_type * __s, streamsize __n) [inline], [inherited]

Entry point for all single-character output functions.

Parameters

__*s*	A buffer read area.
__*n*	A count.

One of two public output functions.

Returns xsputn(__s,__n). The effect is to write __*s*[0] through __*s*[__n-1] to the output sequence, if possible.

Definition at line 457 of file streambuf.

References std::basic_streambuf< _CharT, _Traits >::xsputn().

4.1041.4.32 template<typename _Codecvt , typename _Elem = wchar_t, typename _Tr = char_traits<_Elem>> state_type std::wbuffer_convert< _Codecvt, _Elem, _Tr >::state ( ) const [inline], [noexcept]

The conversion state following the last conversion.

Definition at line 442 of file locale_conv.h.

4.1041.4.33 int_type std::basic_streambuf< _Elem , _Tr >::sungetc ( ) [inline], [inherited]

Moving backwards in the input stream.

Returns

The previous character, if possible.

If a putback position is available, this function decrements the input pointer and returns that character. Otherwise, calls and returns pbackfail(). The effect is to *unget* the last character *gotten*.

Definition at line 404 of file streambuf.

References std::basic_streambuf< _CharT, _Traits >::eback(), std::basic_streambuf< _CharT, _Traits >::gbump(), std::basic_streambuf< _CharT, _Traits >::gptr(), and std::basic_streambuf< _CharT, _Traits >::pbackfail().

4.1041.4.34 template<typename _Codecvt , typename _Elem = wchar_t, typename _Tr = char_traits<_Elem>> int std::wbuffer_convert< _Codecvt, _Elem, _Tr >::sync (void) [inline], [protected], [virtual]

Synchronizes the buffer arrays with the controlled sequences.

Returns

-1 on failure.

Each derived class provides its own appropriate behavior, including the definition of *failure*.

Note

Base class version does nothing, returns zero.

Reimplemented from std::basic_streambuf< _Elem, _Tr >.

Definition at line 446 of file locale_conv.h.

References std::basic_streambuf< _CharT, _Traits >::pubsync().

4.1041.4.35 virtual int_type std::basic_streambuf< _Elem , _Tr >::uflow ( ) [inline], [protected], [virtual], [inherited]

Fetches more data from the controlled sequence.

Returns

The first character from the *pending sequence*.

Informally, this function does the same thing as `underflow()`, and in fact is required to call that function. It also returns the new character, like `underflow()` does. However, this function also moves the read position forward by one.

Definition at line 707 of file streambuf.

References std::basic_streambuf< _CharT, _Traits >::gbump(), std::basic_streambuf< _CharT, _Traits >::gptr(), and std::basic_streambuf< _CharT, _Traits >::underflow().

4.1041.4.36 template<typename _Codecvt , typename _Elem = wchar_t, typename _Tr = char_traits<_Elem>> _Wide_streambuf::int_type std::wbuffer_convert< _Codecvt, _Elem, _Tr >::underflow ( ) [inline], [protected], [virtual]

Fetches more data from the controlled sequence.

Returns

The first character from the *pending sequence*.

Informally, this function is called when the input buffer is exhausted (or does not exist, as buffering need not actually be done). If a buffer exists, it is *refilled*. In either case, the next available character is returned, or `traits::eof()` to indicate a null pending sequence.

For a formal definition of the pending sequence, see a good text such as Langer & Kreft, or [27.5.2.4.3]/7-14.

A functioning input streambuf can be created by overriding only this function (no buffer area will be used). For an example, see https://gcc.gnu.org/onlinedocs/libstdc++/manual/streambufs.html

Note

Base class version does nothing, returns eof().

Reimplemented from std::basic_streambuf< _Elem, _Tr >.

Definition at line 460 of file locale_conv.h.

References std::basic_streambuf< _Elem, _Tr >::egptr(), and std::basic_streambuf< _Elem, _Tr >::gptr().

4.1041.4.37 virtual streamsize std::basic_streambuf< _Elem , _Tr >::xsgetn (char_type * __s, streamsize __n) [protected], [virtual], [inherited]

Multiple character extraction.

Parameters

__s	A buffer area.
__n	Maximum number of characters to assign.

Returns

The number of characters assigned.

Fills *__s*[0] through *__s*[__n-1] with characters from the input sequence, as if by `sbumpc()`. Stops when either *__n* characters have been copied, or when `traits::eof()` would be copied.

It is expected that derived classes provide a more efficient implementation by overriding this definition.

4.1041.4.38 virtual streamsize std::basic_streambuf< _Elem , _Tr >::xsputn (const char_type * __s, streamsize __n) [protected], [virtual], [inherited]

Multiple character insertion.

Parameters

__s	A buffer area.
__n	Maximum number of characters to write.

Returns

The number of characters written.

Writes *__s*[0] through *__s*[__n-1] to the output sequence, as if by `sputc()`. Stops when either *n* characters have been copied, or when `sputc()` would return `traits::eof()`.

It is expected that derived classes provide a more efficient implementation by overriding this definition.

4.1041.5 Member Data Documentation

4.1042.1 Detailed Description

template<typename _Tp>class std::weak_ptr< _Tp >

A non-owning observer for a pointer owned by a shared_ptr.

A weak_ptr provides a safe alternative to a raw pointer when you want a non-owning reference to an object that is managed by a shared_ptr.

Unlike a raw pointer, a weak_ptr can be converted to a new shared_ptr that shares ownership with every other shared-_ptr that already owns the pointer. In other words you can upgrade from a non-owning "weak" reference to an owning shared_ptr, without having access to any of the existing shared_ptr objects.

Also unlike a raw pointer, a weak_ptr does not become "dangling" after the object it points to has been destroyed. Instead, a weak_ptr becomes *expired* and can no longer be converted to a shared_ptr that owns the freed pointer, so you cannot accidentally access the pointed-to object after it has been destroyed.

4.1043.1 Detailed Description

template<typename _RealType = double>class std::weibull_distribution< _RealType >

A weibull_distribution random number distribution.

The formula for the normal probability density function is:

$$p(x|\alpha,\beta) = \frac{\alpha}{\beta}(\frac{x}{\beta})^{\alpha-1}\exp(-(\frac{x}{\beta})^{\alpha})$$

Definition at line 4851 of file random.h.

4.1043.2 Member Typedef Documentation

4.1043.2.1 template<typename _RealType = double> typedef _RealType std::weibull_distribution< _RealType >::result_type

The type of the range of the distribution.

Definition at line 4854 of file random.h.

4.1043.3 Member Function Documentation

4.1043.3.1 template<typename _RealType = double> _RealType std::weibull_distribution< _RealType >::a ( ) const [inline]

Return the a parameter of the distribution.

Definition at line 4916 of file random.h.

4.1043.3.2 template<typename _RealType = double> _RealType std::weibull_distribution< _RealType >::b ( ) const [inline]

Return the b parameter of the distribution.

Definition at line 4923 of file random.h.

4.1043.3.3 template<typename _RealType = double> result_type std::weibull_distribution< _RealType >::max ( ) const [inline]

Returns the least upper bound value of the distribution.

Definition at line 4952 of file random.h.

References std::numeric_limits< _Tp >::max().

4.1043.3.4 template<typename _RealType = double> result_type std::weibull_distribution< _RealType >::min ( ) const [inline]

Returns the greatest lower bound value of the distribution.

Definition at line 4945 of file random.h.

4.1043.3.5 template<typename _RealType = double> template<typename _UniformRandomNumberGenerator > result_type std::weibull_distribution< _RealType >::operator() (_UniformRandomNumberGenerator & *__urng*) [inline]

Generating functions.

Definition at line 4960 of file random.h.

4.1043.3.6 template<typename _RealType = double> param_type std::weibull_distribution< _RealType >::param ( ) const [inline]

Returns the parameter set of the distribution.

Definition at line 4930 of file random.h.

Referenced by std::operator>>().

4.1043.3.7 template<typename _RealType = double> void std::weibull_distribution< _RealType >::param (const param_type & *__param*) [inline]

Sets the parameter set of the distribution.

Parameters

__param	The new parameter set of the distribution.

Definition at line 4938 of file random.h.

4.1043.3.8 template<typename _RealType = double> void std::weibull_distribution< _RealType >::reset ( ) [inline]

Resets the distribution state.

Definition at line 4909 of file random.h.

4.1043.4 Friends And Related Function Documentation

4.1043.4.1 template<typename _RealType = double> bool operator== (const weibull_distribution< _RealType > & *__d1*, const weibull_distribution< _RealType > & *__d2*) [friend]

Return true if two Weibull distributions have the same parameters.

Definition at line 4995 of file random.h.

4.1044.1 Detailed Description

template<typename _Codecvt, typename _Elem = wchar_t, typename _Wide_alloc = allocator<_Elem>, typename _Byte_alloc = allocator<char>>class std::wstring_convert< _Codecvt, _Elem, _Wide_alloc, _Byte_alloc >

String conversions.

Definition at line 232 of file locale_conv.h.

4.1044.2 Constructor & Destructor Documentation

4.1044.2.1 template<typename _Codecvt , typename _Elem = wchar_t, typename _Wide_alloc = allocator<_Elem>, typename _Byte_alloc = allocator<char>> std::wstring_convert< _Codecvt, _Elem, _Wide_alloc, _Byte_alloc >::wstring_convert ( ) [inline]

Default constructor.

Definition at line 241 of file locale_conv.h.

4.1044.2.2 template<typename _Codecvt , typename _Elem = wchar_t, typename _Wide_alloc = allocator<_Elem>, typename _Byte_alloc = allocator<char>> std::wstring_convert< _Codecvt, _Elem, _Wide_alloc, _Byte_alloc >::wstring_convert (_Codecvt * *__pcvt*) [inline], [explicit]

Constructor.

Parameters

__pcvt	The facet to use for conversions.

Takes ownership of __pcvt and will delete it in the destructor.

Definition at line 250 of file locale_conv.h.

4.1044.2.3 template<typename _Codecvt , typename _Elem = wchar_t, typename _Wide_alloc = allocator<_Elem>, typename _Byte_alloc = allocator<char>> std::wstring_convert< _Codecvt, _Elem, _Wide_alloc, _Byte_alloc >::wstring_convert (_Codecvt * *__pcvt,* state_type *__state*) [inline]

Construct with an initial converstion state.

Parameters

__pcvt	The facet to use for conversions.
__state	Initial conversion state.

Takes ownership of __pcvt and will delete it in the destructor. The object's conversion state will persist between conversions.

Definition at line 264 of file locale_conv.h.

4.1044.2.4 template<typename _Codecvt , typename _Elem = wchar_t, typename _Wide_alloc = allocator<_Elem>, typename _Byte_alloc = allocator<char>> std::wstring_convert< _Codecvt, _Elem, _Wide_alloc, _Byte_alloc >::wstring_convert (const byte_string & *__byte_err,* const wide_string & *__wide_err* = wide_string ()) [inline],[explicit]

Construct with error strings.

Parameters

__byte_err	A string to return on failed conversions.
__wide_err	A wide string to return on failed conversions.

Definition at line 277 of file locale_conv.h.

4.1044.3 Member Function Documentation

4.1044.3.1 template<typename _Codecvt , typename _Elem = wchar_t, typename _Wide_alloc = allocator<_Elem>, typename _Byte_alloc = allocator<char>> size_t std::wstring_convert< _Codecvt, _Elem, _Wide_alloc, _Byte_alloc >::converted ( ) const [inline],[noexcept]

The number of elements successfully converted in the last conversion.

Definition at line 367 of file locale_conv.h.

4.1044.3.2 template<typename _Codecvt , typename _Elem = wchar_t, typename _Wide_alloc = allocator<_Elem>, typename _Byte_alloc = allocator<char>> wide_string std::wstring_convert< _Codecvt, _Elem, _Wide_alloc, _Byte_alloc >::from_bytes (char *__byte*) [inline]

Convert from bytes.

Definition at line 296 of file locale_conv.h.

Referenced by std::wstring_convert< _Codecvt, _Elem, _Wide_alloc, _Byte_alloc >::from_bytes().

4.1044.3.3 template<typename _Codecvt , typename _Elem = wchar_t, typename _Wide_alloc = allocator<_Elem>, typename _Byte_alloc = allocator<char>> wide_string std::wstring_convert< _Codecvt, _Elem, _Wide_alloc, _Byte_alloc >::from_bytes (const char * *__ptr*) [inline]

Convert from bytes.

Definition at line 303 of file locale_conv.h.

References std::wstring_convert< _Codecvt, _Elem, _Wide_alloc, _Byte_alloc >::from_bytes().

5.1.1 Detailed Description

Parallel STL function calls corresponding to the stl_algo.h header. The functions defined here mainly do case switches and call the actual parallelized versions in other files. Inlining policy: Functions that basically only contain one function call, are declared inline. This file is a GNU parallel extension to the Standard C++ Library.

Definition in file algo.h.
